Legal information

Warning concept

This manual contains information which you must observe to ensure your safety as well as to avoid material damage. The notices referring to your personal safety are highlighted in the manual by a safety alert symbol, notices referring only to equipment damage have no safety alert symbol. Depending on the hazard level, warnings are indicated in a descending order as follows:

⚠ **DANGER**
indicates that death or serious injury **will** result if proper precautions are not taken.

⚠ **WARNING**
indicates that death or serious injury **could** result if proper precautions are not taken.

⚠ **CAUTION**
indicates that minor injury can result if proper precautions are not taken.

NOTICE
indicates that property damage can result if proper precautions are not taken.

If more than one level of danger is simultaneously applicable, the warning notice for the highest level is used. A notice warning of injury with a safety alert symbol may also include a warning relating to property damage.

Qualified personnel

The product/system described in this documentation may only be operated by **personnel qualified** for the specific task in accordance with the relevant documentation for the specific task, in particular its warning notices and safety instructions. Qualified personnel are those who, based on their training and experience, are capable of identifying risks and avoiding potential hazards when working with these products/systems.

Proper use of Siemens products

Note the following:

⚠ **WARNING**
Siemens products are only permitted to be used for the applications listed in the catalog and in the associated technical documentation. If third-party products and components are used, then they must be recommended or approved by Siemens. These products can only function correctly and safely if they are transported, stored, set up, mounted, installed, commissioned, operated and maintained correctly. The permissible ambient conditions must be adhered to. Notes in the associated documentation must be observed.

Trademarks

All names identified with ® are registered trademarks of Siemens AG. Any other names used in this publication may be trademarks whose use by third parties for their own purposes could violate the rights of the owner.

Disclaimer of liability

We have checked the contents of this publication for consistency with the hardware and software described. Since variance cannot be precluded entirely, we cannot guarantee full consistency. The information given in this document is reviewed at regular intervals and any corrections that might be necessary are made in the subsequent editions.

Preface

SINAMICS documentation

The SINAMICS documentation is structured according to the following categories:

- General documentation/catalogs
- Manufacturer/service documentation

Additional information

Information on the following topics is available under the link:

- Ordering documentation / overview of documentation
- Additional links to download documents
- Using documentation online (browse and search in manuals/information).

https://support.industry.siemens.com/cs/ww/en/view/109807358

My Documentation Manager

Information on how to produce individual contents for your own machine documentation based on Siemens contents is available under the link:

http://www.siemens.com/mdm

Training

Information about SITRAIN (Siemens Training on products, systems and solutions for automation) is available under the following link:

http://www.siemens.com/sitrain

FAQs

You can find Frequently Asked Questions in the Service&Support pages under Product Support:

http://support.automation.siemens.com

SINAMICS

You can find information on SINAMICS at:

http://www.siemens.com/sinamics

Usage phases and their tools/documents (as an example)

Table V-1 Usage phases and the available tools/documents

Usage phase	Tools/documents
Orientation	SINAMICS G Sales Documentation
Planning/configuring	SIZER Engineering Tool Configuration Manuals, Motors
Deciding/ordering	SINAMICS G Catalogs
Installation/assembly	• SINAMICS G150 Operating Instructions • SINAMICS G130 Operating Instructions
Commissioning	• STARTER Commissioning Tool • Startdrive commissioning tool • SINAMICS G150 Operating Instructions • SINAMICS G130 Operating Instructions
Usage/operation	• SINAMICS G150 Operating Instructions • SINAMICS G130 Operating Instructions
Maintenance/servicing	• SINAMICS G150 Operating Instructions • SINAMICS G130 Operating Instructions

Target group

This documentation addresses machine manufacturers, commissioning engineers, and service personnel who use SINAMICS.

Benefits

This documentation contains comprehensive information about parameters, function diagrams and faults and alarms required to commission and service the system.

This manual should be used in addition to the other manuals and tools provided for the product.

Standard scope

The scope of the functionality described in this document can differ from the scope of the functionality of the drive that is actually supplied.

- Other functions not described in this documentation might be able to be executed in the drive system. However, no claim can be made regarding the availability of these functions when the equipment is first supplied or in the event of servicing.
- Functions that are not available in a particular product version of the drive system may be described in the documentation. The functionalities of the supplied drive system should only be taken from the ordering documentation.
- Supplements or changes made by the machine manufacturer must be documented by the machine manufacturer.

For reasons of clarity, this documentation does not contain all of the detailed information on all of the product types. This documentation cannot take into consideration every conceivable type of installation, operation and service/maintenance.

Search aids

The following aids are provided to help you locate information in this manual:

1. Table of contents
   – Table of contents for the complete manual (Page 9)
   – Table of contents for function diagrams (Page 1183)
2. List of abbreviations (Page 2089)
3. References (Page 2098)
4. Index (Page 2101)

Technical Support

Country-specific telephone numbers for technical support are provided on the Internet at:

http://www.siemens.com/automation/service&support

Compliance with the General Data Protection Regulation

Siemens respects the principles of data protection, in particular the data minimization rules (privacy by design).

For this product, this means:
The product does not process neither store any person-related data, only technical function data (e.g. time stamps). If the user links these data with other data (e.g. shift plans) or if he stores person-related data on the same data medium (e.g. hard disk), thus personalizing these data, he has to ensure compliance with the applicable data protection stipulations.

Table of contents

1 Fundamental safety instructions 11

1.1 General safety instructions 12

1.2 Warranty and liability for application examples 12

1.3 Security information 13

2 Parameters 15

2.1 Overview of parameters 16
2.1.1 Explanation of the parameter list 16
2.1.2 Number ranges of parameters 31

2.2 List of parameters 34

2.3 Parameters for data sets 1154
2.3.1 Parameters for command data sets (CDS) 1154
2.3.2 Parameters for drive data sets (DDS) 1156
2.3.3 Parameters for encoder data sets (EDS) 1164
2.3.4 Parameters for motor data sets (MDS) 1166
2.3.5 Parameters for power unit data sets (PDS) 1169

2.4 Parameters for write protection and know-how protection 1171
2.4.1 Parameters with "WRITE_NO_LOCK" 1171
2.4.2 Parameters with "KHP_WRITE_NO_LOCK" 1173
2.4.3 Parameters with "KHP_ACTIVE_READ" 1174

3 Function diagrams 1177

3.1 Table of contents 1179

3.2 Explanation of the function diagrams 1187

3.3 CU320-2 input/output terminals 1192

3.4 Control Unit communication 1200

3.5 PROFIenergy 1205

3.6 PROFIdrive 1208

3.7 Internal control/status words 1251

3.8 Sequence control 1264

3.9 Brake control 1267

3.10 Safety Integrated Basic Functions 1272

3.11 Safety Integrated Extended Functions 1280

3.12 Safety Integrated Advanced Functions 1294

3.13 Safety Integrated TM54F 1298

3.14 Safety Integrated PROFIsafe 1311

3.15 Setpoint channel 1314

3.16 Encoder evaluation 1324
3.17 Vector control 1329
3.18 Technology functions 1360
3.19 Technology controller 1367
3.20 Signals and monitoring functions 1374
3.21 Diagnostics 1387
3.22 Data sets 1396
3.23 Basic Infeed 1402
3.24 Terminal Board 30 (TB30) 1410
3.25 Communication Board CAN10 (CBC10) 1416
3.26 Terminal Module 31 (TM31) 1423
3.27 Terminal Module 120 (TM120) 1435
3.28 Terminal Module 150 (TM150) 1438
3.29 Voltage Sensing Module (VSM) 1442
3.30 Basic Operator Panel 20 (BOP20) 1445

4 Faults and alarms 1447

4.1 Overview of faults and alarms 1448
4.1.1 General information on faults and alarms 1448
4.1.2 Explanation of the list of faults and alarms 1453
4.1.3 Number ranges of faults and alarms 1460
4.2 List of faults and alarms 1462

A Appendix 2081

Content

1.1	General safety instructions	12
1.2	Warranty and liability for application examples	12
1.3	Security information	13

1.1 General safety instructions

⚠ WARNING

Danger to life if the safety instructions and residual risks are not observed

If the safety instructions and residual risks in the associated hardware documentation are not observed, accidents involving severe injuries or death can occur.

- Observe the safety instructions given in the hardware documentation.
- Consider the residual risks for the risk evaluation.

⚠ WARNING

Malfunctions of the machine as a result of incorrect or changed parameter settings

As a result of incorrect or changed parameterization, machines can malfunction, which in turn can lead to injuries or death.

- Protect the parameterization against unauthorized access.
- Handle possible malfunctions by taking suitable measures, e.g. emergency stop or emergency off.

1.2 Warranty and liability for application examples

Application examples are not binding and do not claim to be complete regarding configuration, equipment or any eventuality which may arise. Application examples do not represent specific customer solutions, but are only intended to provide support for typical tasks.

As the user you yourself are responsible for ensuring that the products described are operated correctly. Application examples do not relieve you of your responsibility for safe handling when using, installing, operating and maintaining the equipment.

1.3 Security information

Siemens provides products and solutions with industrial security functions that support the secure operation of plants, systems, machines and networks.

In order to protect plants, systems, machines and networks against cyber threats, it is necessary to implement – and continuously maintain – a holistic, state-of-the-art industrial security concept. Siemens' products and solutions constitute one element of such a concept.

Customers are responsible for preventing unauthorized access to their plants, systems, machines and networks. Such systems, machines and components should only be connected to an enterprise network or the internet if and to the extent such a connection is necessary and only when appropriate security measures (e.g. firewalls and/or network segmentation) are in place.

For additional information on industrial security measures that can be implemented, please visit:

Industrial security (https://www.siemens.com/industrialsecurity)

Siemens' products and solutions undergo continuous development to make them more secure. Siemens strongly recommends that product updates are applied as soon as they are available and that the latest product versions are used. Use of product versions that are no longer supported, and failure to apply the latest updates may increase customer's exposure to cyber threats.

To stay informed about product updates, subscribe to the Siemens Industrial Security RSS Feed at:

Industrial security
(https://new.siemens.com/global/en/products/services/cert.html#Subscriptions).

Further information is provided on the Internet:

Industrial Security Configuration Manual
(https://support.industry.siemens.com/cs/ww/en/view/108862708)

⚠ WARNING

Unsafe operating states resulting from software manipulation

Software manipulations (e.g. viruses, trojans, malware or worms) can cause unsafe operating states in your system that may lead to death, serious injury, and property damage.

- Keep the software up to date.
- Incorporate the automation and drive components into a holistic, state-of-the-art industrial security concept for the installation or machine.
- Make sure that you include all installed products into the holistic industrial security concept.
- Protect files stored on exchangeable storage media from malicious software by with suitable protection measures, e.g. virus scanners.
- On completion of commissioning, check all security-related settings.

Parameters

2

Content

2.1	Overview of parameters	16
2.2	List of parameters	34
2.3	Parameters for data sets	1158
2.4	Parameters for write protection and know-how protection	1175

2.1 Overview of parameters

2.1.1 Explanation of the parameter list

Basic structure of the parameter descriptions

The data in the following example has been chosen at random. The table below contains all the information that can be included in a parameter description. Some of the information is optional.

The "List of parameters (Page 34)" has the following structure:

**- - - - - - - - - - - Start of example - - - - - - - - - -

pxxxx[0...n] Parameter number

The parameter number is made up of a "p" or "r", followed by the parameter number and the index (optional).

Examples of the representation in the parameter list:

- p... Adjustable parameters (read and write parameters)
- r... Display parameters (read only)
- p0918 Adjustable parameter 918
- p0099[0...3] Adjustable parameter 99, indices 0 to 3
- p1001[0...n] Adjustable parameter 1001, indices 0 to n (n = configurable)
- r0944 Display parameter 944
- r2129.0...15 Display parameter 2129 with bit field from bit 0 (lowest bit) to bit 15 (highest bit)

Other examples of the notation in the documentation:

- p1070[1] Adjustable parameter 1070, index 1
- p2098[1].3 Adjustable parameter 2098, index 1 bit 3
- r0945[2](3) Display parameter 945, index 2 of drive object 3
- p0795.4 Adjustable parameter 795, bit 4

The following applies to adjustable parameters:

The parameter value as delivered is specified under "Factory setting" with the relevant unit in square brackets. The value can be adjusted within the range defined by "Min" and "Max".

The term "linked parameterization" is used in cases where changes to adjustable parameters affect the settings of other parameters.

Linked parameterization can occur, for example, as a result of the following actions and parameters:

- Executing macros

  p0015, p0700, p1000, p1500
- Setting the PROFIBUS telegram (BICO interconnection)

  p0922
- Setting component lists

  p0230, p0300, p0301, p0400
- Automatic calculation and pre-assignment

  p0112, p0340, p0578, p3900
- Restoring the factory settings

  p0970

The following applies to display parameters:

The fields "Min", "Max" and "Factory setting" are specified with a dash "-" and the relevant unit in square brackets.

Note

The parameter list can contain parameters that are not visible in the expert lists of the particular commissioning software (e.g. parameters for trace functions).

BICO: Full parameter name / short name

The following abbreviations can appear in front of the parameter name:

- BI: Binector Input
  This parameter is used for selecting the source of a digital signal.
- BO: Binector output
  This parameter is available as a digital signal for interconnection with other parameters.
- CI: Connector Input
  This parameter is used for selecting the source of an "analog" signal.
- CO: Connector output
  This parameter is available as an "analog" signal for interconnection with other parameters.
- CO/BO: Connector/Binector Output
  This parameter is available as an "analog" and digital signal for interconnection with other parameters.

Note

A connector input (CI) cannot be arbitrarily interconnected with any connector output (CO, signal source).
When interconnecting a connector input using the commissioning software, only the corresponding possible signal sources are listed.

Drive object (function module)

A drive object (DO) is an independent, "self-contained" functional unit that has its own parameters and, in some cases, faults and alarms.

When carrying out commissioning using the commissioning software, you can select/deselect additional functions and their parameters by activating/deactivating function modules accordingly.

The parameter list specifies the associated drive object and function module for each individual parameter.

Examples:

- p1070 CI: Main setpoint
  VECTOR
  The parameter is only available with the VECTOR drive object, regardless of which function modules have been activated.
- p1055 BI: Jog bit 0
  VECTOR
  The parameter is available with the VECTOR drive object, regardless of which function modules have been activated (i.e. it is available with every activated function module belonging to the drive object).

A parameter can belong to a single, multiple, or all drive objects.

The following information relating to "Drive object" and "Function module" can be displayed under the parameter number:

Table 2-1 Data in the "Drive object (function module)" field

Drive object (function module)	Type	Meaning
All objects	-	This parameter is used by all drive objects.
B_INF	30	Basic Infeed closed-loop control Unregulated line infeed unit (without regenerative feedback) for rectifying the line voltage of the DC link.
B_INF (Rec)	-	Basic Infeed with "Recorder" function module (r0108.5)
B_INF (parallel)	-	Basic Infeed with "Parallel connection" function module (r0108.15).
B_INF (Brk Mod Ext)	-	Basic Infeed with "Braking Module external" function module (r0108.26).
B_INF (Cooling unit)	-	Basic Infeed with "Cooling unit" function module (r0108.28)
B_INF (PN CBE20)	-	Basic Infeed with "PROFINET CBE20" function module (r0108.31).
CU_G130_DP		SINAMICS G130 Control Unit with PROFIBUS interface.
CU_G130_DP (CAN)	-	SINAMICS G130 Control Unit with PROFIBUS interface and "CAN" function module (p0108.29).
CU_G130_DP (COMM BOARD)		SINAMICS G130 Control Unit with PROFIBUS interface and "COMM BOARD" function module (p0108.30).
CU_G130_DP (PN CBE20)	-	SINAMICS G130 Control Unit with PROFIBUS interface and "PROFINET CBE20" function module (p0108.31).
CU_G130_PN		SINAMICS G130 Control Unit with PROFINET interface.
CU_G130_PN (CAN)	-	SINAMICS G130 Control Unit with PROFINET interface and "CAN" function module (p0108.29).
CU_G130_PN (COMM BOARD)		SINAMICS G130 Control Unit with PROFINET interface and "COMM BOARD" function module (p0108.30).
CU_G130_PN (PN CBE20)		SINAMICS G130 Control Unit with PROFINET interface and "PROFINET CBE20" function module (p0108.31).
CU_G150_DP		SINAMICS G150 Control Unit with PROFIBUS interface.
CU_G150_DP (CAN)	-	SINAMICS G150 Control Unit with PROFIBUS interface and "CAN" function module (p0108.29).
CU_G150_DP (COMM BOARD)		SINAMICS G150 Control Unit with PROFIBUS interface and "COMM BOARD" function module (p0108.30).
CU_G150_DP (PN CBE20)	-	SINAMICS G150 Control Unit with PROFIBUS interface and "PROFINET CBE20" function module (p0108.31).
CU_G150_PN		SINAMICS G150 Control Unit with PROFINET interface.
CU_G150_PN (CAN)	-	SINAMICS G150 Control Unit with PROFINET interface and "CAN" function module (p0108.29).
CU_G150_PN (COMM BOARD)		SINAMICS G150 Control Unit with PROFINET interface and "COMM BOARD" function module (p0108.30).
CU_G150_PN (PN CBE20)		SINAMICS G150 Control Unit with PROFINET interface and "PROFINET CBE20" function module (p0108.31).

Table 2-1 Data in the "Drive object (function module)" field, continued

Drive object (function module)	Type	Meaning
ENC	300	Object for a DRIVE-CLiQ encoder.
ENC (lin_encoder)	-	Object for a DRIVE-CLiQ encoder with "Linear encoder" function module (r0108.12).
ENC (PN CBE20)	-	Object for a DRIVE-CLiQ encoder with "PROFINET CBE20" function module (r0108.31).
HUB	150	DRIVE-CLiQ Hub Module.
TB30	100	Terminal Board 30.
TM120	207	Terminal Module 120.
TM150	208	Terminal Module 150.
TM31	200	Terminal Module 31.
TM54F_MA	205	Terminal Module 54F Master.
TM54F_SL	206	Terminal Module 54F Slave.
VECTOR_G	12	Vector drive for SINAMICS G130/G150.
VECTOR_G (n/M)	-	Vector drive for SINAMICS G130/G150 with "Speed/torque control" function module (r0108.2).
VECTOR_G (Rec)	-	Vector drive for SINAMICS G130/G150 with "Recorder" function module (r0108.5).
VECTOR_G (J_estimator/OBT)	-	Vector drive for SINAMICS G130/G150 with "Moment of inertia estimator/OBT" function module (r0108.10).
VECTOR_G (Safety red)	-	Vector drive for SINAMICS G130/G150 with "Safety rotary axis" function module (r0108.13).
VECTOR_G (ext brake)	-	Vector drive for SINAMICS G130/G150 with "Extended brake control" function module (r0108.14).
VECTOR_G (parallel)	-	Vector drive for SINAMICS G130/G150 with "Parallel connection" function module (r0108.15).
VECTOR_G (Tech_ctrl)	-	Vector drive for SINAMICS G130/G150 with "Technology controller" function module (r0108.16).
VECTOR_G (ext mess)	-	Vector drive for SINAMICS G130/G150 with "Extended messages/monitoring functions" function module (r0108.17).
VECTOR_G (Cooling unit)	-	Vector drive for SINAMICS G130/G150 with "Cooling unit" function module (r0108.28).
VECTOR_G (CAN)	-	Vector drive for SINAMICS G130/G150 with "CAN" function module (r0108.29).
VECTOR_G (PN CBE20)	-	Vector drive for SINAMICS G130/G150 with "PROFINET CBE20" function module (r0108.31).

Note

The drive object type is used to identify the drive objects in the drive system (e.g. r0107, r0975[1]).

Can be changed

The "-" sign indicates that the parameter can be changed in any object state and that the change will be effective immediately.

The information "C1(x), C2(x), T, U" ((x): optional) means that the parameter can be changed only in the specified drive unit state and that the change will not take effect until the unit switches to another state. This can be a single state or multiple states.

The following states are available:

- C1(x) Device commissioning C1: **C**ommissioning **1**

  Device is being commissioned (p0009 > 0).

  Pulses cannot be enabled.

  The parameter can only be changed for the following device commissioning settings (p0009 > 0):

  - C1: Can be changed for all settings p0009 > 0.
  - C1(x): Can be changed only when p0009 = x.

  A modified parameter value does not take effect until the device commissioning mode is exited with p0009 = 0.

- C2(x) Drive object commissioning C2: **C**ommissioning **2**

  Drive commissioning is in progress (p0009 = 0 and p0010 > 0).

  Pulses cannot be enabled.

  The parameter can only be changed in the following drive commissioning settings (p0010 > 0):

  - C2: Can be changed for all settings p0010 > 0.
  - C2(x): Can only be changed for the settings p0010 = x.

  A modified parameter value does not take effect until drive commissioning mode is exited with p0010 = 0.

- U Operation U: R**u**n

  Pulses are enabled.

- T Ready T: Ready **t**o run

  The pulses are not enabled and the state "C1(x)" or "C2(x)" is not active.

Note

Parameter p0009 is CU-specific (belongs to the Control Unit).

Parameter p0010 is drive-specific (belongs to each drive object).

The operating state of individual drive objects is displayed in r0002.

Calculated

Specifies whether the parameter is influenced by automatic calculations.

The calculation attribute defines which activities influence the parameter.

The following attributes apply:

- CALC_MOD_ALL
  - p0340 = 1
  - Project download with commissioning software and send from p0340 = 3
- CALC_MOD_CON
  - p0340 = 1, 3, 4
- CALC_MOD_EQU
  - p0340 = 1, 2
- CALC_MOD_LIM_REF
  - p0340 = 1, 3, 5
  - p0578 = 1
- CALC_MOD_REG
  - p0340 = 1, 3

Note

For p3900 > 0, p0340 = 1 is also called automatically.

After p1910 = 1, p0340 = 3 is also called automatically.

Access level

Specifies the minimum access level required to be able to display and change the relevant parameter. The required access level can be set using p0003.

The system uses the following access levels:

- 1: Standard
- 2: Extended
- 3: Expert
- 4: Service

Note

Parameter p0003 is CU-specific (belongs to the Control Unit).

A higher access level will also include the functions of the lower levels.

Data type

The information on the data type can consist of the following two items (separated by a slash):

- First item

  Data type of the parameter.

- Second item (for binector or connector input only)

  Data type of the signal source to be interconnected (binector/connector output).

Parameters can have the following data types:

- Integer8 I8 8-bit integer number
- Integer16 I16 16-bit integer number
- Integer32 I32 32-bit integer number
- Unsigned8 U8 8 bits without sign
- Unsigned16 U16 16 bits without sign
- Unsigned32 U32 32 bits without sign
- FloatingPoint32 Float 32-bit floating point number

Depending on the data type of the BICO input parameter (signal sink) and BICO output parameter (signal source), the following combinations are possible when creating BICO interconnections:

Table 2-2 Possible combinations of BICO interconnections

	BICO input parameter			
	CI parameter			**BI parameter**
BICO output parameter	**Unsigned32 / Integer16**	**Unsigned32 / Integer32**	**Unsigned32 / FloatingPoint32**	**Unsigned32 / Binary**
CO: Unsigned8	x	x	–	–
CO: Unsigned16	x	x	–	–
CO: Integer16	x	x	r2050, r8850	–
CO: Unsigned32	x	x	–	–
CO: Integer32	x	x	r2060, r8860	–
CO: FloatingPoint32	x	x	x	–
BO: Unsigned8	–	–	–	x
BO: Unsigned16	–	–	–	x
BO: Integer16	–	–	–	x
BO: Unsigned32	–	–	–	x
BO: Integer32	–	–	–	x
BO: FloatingPoint32	–	–	–	–

Legend:
x : BICO interconnection permitted
–: BICO interconnection not permitted
rxxxx: BICO interconnection is only permitted for the specified CO parameters

Dynamic index

For parameters with a dynamic index [0...n], the following information is specified here:

- Data set (if available).
- Parameter for the number of indices (n = number - 1).

The following information can be contained in this field:

- "CDS, p0170" (Command Data Set, CDS count)

  Example:

  p1070[0] → main setpoint [command data set 0]

  p1070[1] → main setpoint [command data set 1], etc.
- "DDS, p0180" (Drive Data Set, DDS count)
- "EDS, p0140" (Encoder Data Set, EDS count)
- "MDS, p0130" (Motor Data Set, MDS count)
- "PDS, p0120" (Power unit Data Set, PDS count)
- "p2615" (traversing blocks count)

Function diagram

The parameter is included in this function diagram. The structure of the parameter function and its relationship with other parameters is shown in the specified function diagram.

P-Group (only when accessing via BOP (Basic Operator Panel))

Specifies the functional group to which this parameter belongs. The required parameter group can be set via p0004.

Note

Parameter p0004 is CU-specific (belongs to the Control Unit).

Unit, unit group and unit selection

The standard unit of a parameter is specified in square brackets after the values for "Min", "Max", and "Factory setting".

For parameters where the unit can be switched over, the specifications for "Unit group" and "Unit selection" determine the group to which this parameter belongs and with which parameter the unit can be changed over.

Example:

Unit group: 7_1, unit selection: p0505

The parameter belongs to unit group 7_1 and the unit can be changed over using p0505.

Note

Detailed information on changing over units can be found in the following references:

References: /FH1/ SINAMICS S120 Function Manual Drive Functions

References: /BA3/ SINAMICS S150 Operating Instructions

All the potential unit groups and possible unit selections are listed below.

Table 2-3 Unit groups (p0100)

Unit group	Unit selection for p0100 =		Reference variable for %
	0	1	
7_4	Nm	lbf ft	-
8_4	N	lbf	-
14_2	W	HP	-
14_6	kW	HP	-
14_13	W/A	HP/A	-
14_14	W min/1000	HP min/1000	-
14_15	W/A^2	HP/A^2	-
14_16	$W\ min^2/1000^2$	$HP\ min^2/1000^2$	-
25_1	kgm^2	$lb\ ft^2$	-
27_1	kg	lb	-
28_1	Nm/A	lbf ft/A	-
29_1	N/Arms	lbf/Arms	-
30_1	m	ft	-
47_1	kW s/K	HP s/K	-
48_1	W/K	HP/K	-
48_2	W min/1000 K	HP min/1000 K	-
48_3	$W\ min^2/1000^2\ K$	$HP\ min^2/1000^2\ K$	-
50_1	K/W	K/HP	-

Table 2-4 Unit groups (p0349)

Unit group	Unit selection for p0349 =		Reference variable for %
	1	2	
15_1	mH	%	$\frac{1000 \cdot p0304}{2 \cdot \pi \cdot \sqrt{3} \cdot p0305 \cdot p0310}$
16_1	Ohm	%	$\frac{p0304}{\sqrt{3} \cdot p0305}$

Table 2-5 Unit groups (p0505)

Unit group	Unit selection for p0505 =				Reference variable for %
	1	2	3	4	
2_1	Hz	%	Hz	%	p2000
2_2	kHz	%	kHz	%	p2000
3_1	1 rpm	%	1 rpm	%	p2000
4_1	m/min	%	ft/min	%	p2000
4_2	m/min	m/min	ft/min	ft/min	-
5_1	Vrms	%	Vrms	%	p2001
5_2	V	%	V	%	p2001
5_3	V	%	V	%	p2001
6_1	mArms	%	mArms	%	p2002
6_2	Arms	%	Arms	%	p2002
6_3	mA	%	mA	%	p2002
6_4	A	%	A	%	p2002
6_5	A	%	A	%	p2002
7_1	Nm	%	lbf ft	%	p2003
7_2	Nm	Nm	lbf ft	lbf ft	-
7_3	Nm	%	lbf ft	%	1.0
8_1	N	%	lbf	%	p2003
8_2	N	N	lbf	lbf	-
8_3	N	%	lbf	%	1.0
14_1	W	%	HP	%	r2004 (drive)
14_3	W	%	HP	%	r2004 (infeed)
14_4	W	%	HP	%	r2004 (drive)
14_5	kW	%	HP	%	r2004 (drive)
14_7	kW	%	HP	%	r2004 (infeed)
14_8	kW	%	HP	%	r2004 (drive)
14_9	W	W	HP	HP	-
14_10	kW	kW	HP	HP	-
14_11	var	%	var	%	r2004
14_12	kvar	%	kvar	%	r2004
17_1	Nms/rad	%	lbf ft s/rad	%	p2003/p2000
18_1	V/A	%	V/A	%	p2001/p2002
19_1	A/V	%	A/V	%	p2002/p2001
21_1	°C	°C	°F	°F	-
21_2	K	K	°F	°F	-
22_1	m/s^2	m/s^2	ft/s^2	ft/s^2	-

Table 2-5 Unit groups (p0505), continued

Unit group	Unit selection for p0505 =				Reference variable for %
	1	2	3	4	
22_2	m/s^2	%	ft/s^2	%	p2007
23_1	Vrms s/m	Vrms s/m	Vrms s/ft	Vrms s/ft	-
24_1	Ns/m	Ns/m	lbf s/ft	lbf s/ft	-
24_2	Ns/m	%	lbf s/ft	%	p2003/p2000
26_1	m/s^3	m/s^3	ft/s^3	ft/s^3	-
39_1	$1/s^2$	%	$1/s^2$	%	p2007
49_1	Nm/rad	%	lbf ft/rad	%	p2003

Table 2-6 Unit group (p0595)

Unit group	Unit selection for p0595 =		Reference variable for %
	Value	Unit	
9_1	The values that can be set and the technological units are shown in p0595.		

Parameter values

Min	Minimum value of the parameter [unit]
Max	Maximum value of the parameter [unit]
Factory setting	Value when delivered [unit] In the case of a binector/connector input, the signal source of the default BICO interconnection is specified. A non-indexed connector output is assigned the index [0]. A different value may be displayed for certain parameters (e.g. p1800) at the initial commissioning stage or when establishing the factory settings. Reason: The setting of these parameters is determined by the operating environment of the Control Unit (e.g. depending on converter type, macro, power unit).

Note

For SINAMICS G130/G150, the macros and their settings are provided in the following documentation:

References: SINAMICS G150/G130 Operating Instructions

Not for motor type

Specifies for which motor type this parameter has no significance

ASM : Induction motor

PMSM : Permanent-magnet synchronous motor

REL : Reluctance motor textiles / SIEMOSYN motor

RESM : Synchronous reluctance motor

SESM : Separately-excited synchronous motor

Normalization

Specification of the reference variable with which a signal value is automatically converted for a BICO interconnection.

The following reference variables are available:

- p2000 … p2007: Reference speed, reference voltage, etc.
- PERCENT: 1.0 = 100 %
- 4000H: 4000 hex = 100 % (wort) or 4000 0000 hex = 100 % (double word)
- p0514: specific normalization

  Refer to the description for p0514[0…9] and p0515[0…19] to p0524[0…19]

Expert list

Specifies whether this parameter is available in the expert list of the specified drive objects in the commissioning software.

1. Parameter exists in the expert list.

0: Parameter does not exist in the expert list.

NOTICE
Users assume full responsibility for using parameters marked "Expert list: 0" (parameter does not exist in the expert list). These parameters and their functionalities have not been tested and no further user documentation is available for them (e.g. description of functions). Moreover, no support is provided for these parameters by "Technical Support" (hotline).

Description

Explanation of the function of a parameter

Values

Lists the possible values of a parameter.

Recommendation

Information about recommended settings.

Index

The name and meaning of each individual index is specified for indexed parameters.

The following applies to the values (Min, Max, Factory setting) for indexed adjustable parameters:

- Min, Max:

  The adjustment range and unit apply to all indices.

- Factory setting:

  When all indices have the same factory setting, index 0 is specified with the unit to represent all indices.

  When the indices have different factory settings, they are all listed individually with the unit.

Bit field

For parameters with bit fields, the following information is provided about each bit:

- Bit number and signal name
- Meaning for signal states 0 and 1
- Function diagram (optional)

  The signal is shown in this function diagram.

Dependency

Conditions that must be fulfilled in conjunction with this parameter. Also includes special effects that can occur between this parameter and others.

Where necessary, "Refer to:" indicates the following information:

- List of other relevant parameters to be considered.
- List of faults and alarms to be considered.

Safety instructions

Important information that must be observed to avoid the risk of injury or material damage.

Information that must be observed to avoid any problems.

Information that the user may find useful.

Danger

The description of this safety notice can be found at the beginning of this manual, see "Legal information (Page 4)".

Warning

The description of this safety instruction can be found at the beginning of this manual, see "Legal information (Page 4)".

Caution

The description of this safety notice can be found at the beginning of this manual, see "Legal information (Page 4)".

Notice

The description of this safety notice can be found at the beginning of this manual, see "Legal information (Page 4)".

Note

Information that the user may find useful.

2.1.2 Number ranges of parameters

Note

The following number ranges represent an overview for all the parameters available for the SINAMICS drive family.

The parameters for the product described in this List Manual are described in detail in "List of parameters (Page 34)".

Parameters are grouped into the following number ranges:

Table 2-7 Number ranges for SINAMICS

Range		Description
From	To	
0000	0099	Display and operation
0100	0199	Commissioning
0200	0299	Power section
0300	0399	Motor
0400	0499	Encoder
0500	0599	Technology and units, motor-specific data, probes
0600	0699	Thermal monitoring, maximum current, operating hours, motor data, central probe
0700	0799	Control Unit terminals, measuring sockets
0800	0839	CDS, DDS data sets, motor changeover
0840	0879	Sequence control (e.g. signal source for ON/OFF1)
0880	0899	ESR, parking, control and status words
0900	0999	PROFIBUS/PROFIdrive
1000	1199	Setpoint channel (e.g. ramp-function generator)
1200	1299	Functions (e.g. motor holding brake)
1300	1399	U/f control
1400	1799	Closed-loop control
1800	1899	Gating unit
1900	1999	Power unit and motor identification
2000	2009	Reference values
2010	2099	Communication (fieldbus)
2100	2139	Faults and alarms
2140	2199	Signals and monitoring
2200	2359	Technology controller
2360	2399	Staging, hibernation
2500	2699	Position control (LR) and basic positioning (EPOS)
2700	2719	Reference values, display

Table 2-7 Number ranges for SINAMICS, continued

Range		Description
From	To	
2720	2729	Load gearbox
2800	2819	Logic operations
2900	2930	Fixed values (e. g. percentage, torque)
3000	3099	Motor identification results
3100	3109	Real-time clock (RTC)
3110	3199	Faults and alarms
3200	3299	Signals and monitoring
3400	3659	Infeed closed-loop control
3660	3699	Voltage Sensing Module (VSM), Braking Module internal
3700	3779	Advanced Positioning Control (APC)
3780	3819	Synchronization
3820	3849	Friction characteristic
3850	3899	Functions (e. g. long stator)
3900	3999	Management
4000	4599	Terminal Board, Terminal Module (e. g. TB30, TM31)
4600	4699	Sensor Module
4700	4799	Trace
4800	4849	Function generator
4950	4999	OA application
5000	5169	Spindle diagnostics
5200	5230	Current setpoint filter 5 ... 10 (r0108.21)
5400	5499	System droop control (e. g. shaft generator)
5500	5599	Dynamic grid support (solar)
5600	5614	PROFIenergy
5900	6999	SINAMICS GM/SM/GL/SL
7000	7499	Parallel connection of power units
7500	7599	SINAMICS SM120
7700	7729	External messages
7770	7789	NVRAM, system parameters
7800	7839	EEPROM read/write parameters
7840	8399	Internal system parameters
8400	8449	Real-time clock (RTC)
8500	8599	Data and macro management
8600	8799	CAN bus
8800	8899	Communication Board Ethernet (CBE), PROFIdrive

Table 2-7 Number ranges for SINAMICS, continued

Range		Description
From	To	
8900	8999	Industrial Ethernet, PROFINET, CBE20
9000	9299	topology
9300	9399	Safety Integrated
9400	9499	Parameter consistency and storage
9500	9899	Safety Integrated
9900	9949	topology
9950	9999	Diagnostics, internal
10000	10199	Safety Integrated
11000	11299	Free technology controller 0, 1, 2
20000	20999	Free function blocks (FBLOCKS)
21000	25999	Drive Control Chart (DCC)
50000	53999	SINAMICS DC MASTER (closed-loop DC current control)
61000	61001	PROFINET

2.2 List of parameters

Product: SINAMICS G130/G150, Version: 5207347, Language: eng
Objects: CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, VECTOR_G, B_INF, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB

r0002 Control Unit operating display / CU op_display

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	117	-

Description: Operating display for the Control Unit (CU).

Value:

0: Operation
10: Ready
20: Wait for run-up
25: Wait for automatic FW update of DRIVE-CLiQ components
31: Commissioning tool download active
33: Remove/acknowledge topology error
34: Exit commissioning mode
35: Carry out first commissioning
70: Initialization
80: Reset active
99: Internal software error
101: Specify topology
111: Insert drive object
112: Delete drive object
113: Change drive object number
114: Change component number
115: Run parameter download
117: Delete component

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 Drive operating display / Drv op_display

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	250	-

Description: Operating display for the drive.

Value:
0: Operation - everything enabled
10: Operation - set "enable setpoint" = "1" (p1142, p1152)
11: Operation - set "enable speed controller" = "1" (p0856)
12: Operation - RFG frozen, set "RFG start" = "1" (p1141)
13: Operation - set "enable RFG" = "1" (p1140)
14: Oper. - MotID, excit. running and/or brake opens, SS2, STOP C
15: Operation - open brake (p1215)
16: Operation - withdraw braking with OFF1 using "ON/OFF1" = "1"
17: Operation - braking with OFF3 can only be interrupted with OFF2
18: Operation - brake on fault, remove fault, acknowledge
19: Operation - armature short-circ./DC brake act. (p1230, p1231)
21: Ready for operation - set "Enable operation" = "1" (p0852)
22: Ready for operation - de-magnetizing running (p0347)
23: Ready for operation - set "Infeed operation" = "1" (p0864)
31: Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
35: Switching on inhibited - carry out first commissioning (p0010)
41: Switching on inhibited - set "ON/OFF1" = "0" (p0840)
42: Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845)
43: Switching on inhibited - set "OC/OFF3" = "1" (p0848, p0849)
44: Switching on inhibited - supply STO terminal w/ 24 V (hardware)
45: Switching on inhibited - rectify fault, acknowledge fault, STO
46: Switching on inhibited - exit commissioning mode (p0009, p0010)
60: Drive object deactivated/not operational
70: Initialization
200: Wait for booting/partial booting
250: Device signals a topology error

Dependency: See also: r0046

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

Note: OC: Operating condition
EP: Enable Pulses (pulse enable)
RFG: Ramp-function generator
COMM: Commissioning
MotID: Motor data identification
SS2: Safe Stop 2
STO: Safe Torque Off

r0002 Infeed operating display / INF op_display

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	250	-

Description: Operating display for the infeed.

Value:
0: Operation - everything enabled
31: Ready for switching on - precharging running (p0857)
32: Ready for switching on - set "ON/OFF1" = "0/1" (p0840)
35: Switching on inhibited - carry out first commissioning (p0010)
41: Switching on inhibited - set "ON/OFF1" = "0" (p0840)
42: Switching on inhibited - set "OC/OFF2" = "1" (p0844, p0845)
44: Switching on inhibited - connect 24 V to terminal EP (hardware)
45: Switching on inhibited - remove fault cause, acknowledge fault
46: Switching on inhibited - exit commissioning mode (p0009, p0010)
60: Infeed deactivated/not operational
70: Initialization
200: Wait for booting/partial booting
250: Device signals a topology error

Dependency: See also: r0046

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

Note: OC: Operating condition
COMM: Commissioning

r0002 TM120 operating display / TM120 op_display

TM120

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer16 **Dyn. index:** - **Function diagram:** -
P group: - **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1

Min:	Max:	Factory setting:
0	250	-

Description: Operating display for Terminal Module 120 (TM120)

Value:
0: Module in cyclic operation
40: Module not in cyclic operation
50: Alarm
60: Fault
70: Initialization
120: Module deactivated
200: Wait for booting/partial booting
250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 TM150 operating display / TM150 op_display

TM150

Can be changed: - **Calculated:** - **Access level:** 1
Data type: Integer16 **Dyn. index:** - **Function diagram:** -
P group: - **Unit group:** - **Unit selection:** -

Not for motor type: -
Min: 0
Calculated: -
Dyn. index: -
Unit group: -
Scaling: -
Max: 250
Access level: 1
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting: -

Description: Operating display for encoder drive object.

Value:
0: Encoder in cyclic operation
35: Carry out first commissioning (p0010)
45: Remove fault cause, acknowledge fault
46: Exit commissioning mode (p0009, p0010)
60: Encoder deactivated
200: Wait for booting/partial booting
250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

r0002 DRIVE-CLiQ Hub Module operating display / Hub op_display

HUB

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	250	-

Description: Operating display for the DRIVE-CLiQ Hub Module.

Value:
0: Module in cyclic operation
40: Module not in cyclic operation
50: Alarm
60: Fault
70: Initialization
120: Module deactivated
200: Wait for booting/partial booting
250: Device signals a topology error

Notice: For several missing enable signals, the corresponding value with the highest number is displayed.

p0003 BOP access level / BOP acc_level

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1, U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: All groups	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	4	1

Description: Sets the access level for reading and writing parameters via the Basic Operator Panel (BOP).

Value:
1: Standard
2: Extended
3: Expert
4: Service

Note: A higher set access level also includes the lower one.
Access level 1 (standard):
Parameters for simplest possible operations.
Access level 2 (extended):
Parameters to operate the basic functions of the drive unit.
Access level 3 (experts):
Expert know-how is required for these parameters (e.g. BICO parameterization).
Access level 4 (service):
For these parameters, it is necessary that authorized service personnel enter the appropriate password (p3950).

p0004 BOP display filter / BOP disp_filter

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: All groups	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	99	0

Description: Sets the display filter for parameters with the Basic Operator Panel (BOP).

Value:
0: All parameters
1: Displays, signals
2: Power unit
3: Motor
4: Encoder/position encoder
5: Technology/units
7: Digital inputs/outputs, commands, sequence control
8: Analog inputs/outputs
10: Setpoint channel/ramp-fct generator
12: Functions
13: U/f control
14: Control
15: Data sets
17: Basic positioner
18: Gating unit
19: Motor identification
20: Communication
21: Faults, alarms, monitoring functions
25: Position control
28: Free function blocks
47: Trace and function generator
50: Technology Extensions
90: Topology
95: Safety Integrated
98: Command Data Sets (CDS)
99: Drive Data Sets (DDS)

Dependency: See also: p0003

Notice: The display filter via p0004 provides precise filtering and displays the corresponding parameters only when p0009 and p0010 = 0.

Note: The set access level via p0003 is also relevant for the display filter via p0004.
Examples (assumption: p0009 = p0010 = 0):
p0003 = 1, p0004 = 3
--> Only the parameters for the motor with access level 1 are displayed.
p0003 = 2, p0004 = 3
--> Only the parameters for the motor with access levels 1 and 2 are displayed.

p0005[0...1] BOP operating display selection / BOP op_disp sel

All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	65535	[0] 2 [1] 0

Description: Sets the parameter number and parameter index for display for p0006 = 2, 4 for the Basic Operator Panel (BOP).
Examples for the SERVO drive object:
p0005[0] = 21, p0005[1] = 0: Actual speed smoothed (r0021)
p0005[0] = 25, p0005[1] = 0: Output voltage smoothed (r0025)

Index: [0] = Parameter number
[1] = Parameter index

Dependency: See also: p0006

Note: Procedure:

1.

The parameter number to be displayed should be set in index 0. Only the monitoring parameters (read-only parameters) can be set that actually exist for the actual drive object.

If the set parameter number is not indexed, or if there is an index in index 1 that lies outside the valid range of the set parameter, then index 1 is automatically set to 0.

2.

The index that belongs to the parameter set in index 0 should be set in index 1. The permissible changes in index 1 always depend on the parameter number set in index 0.

p0006 BOP operating display mode / BOP op_ disp mode

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
4	4	4

Description: Sets the mode of the operating display for the Basic Operator Panel (BOP) in the operating states "ready for operation" and "operation".

Value: 4: p0005

Dependency: See also: p0005

Note: Mode 0 ... 3 can only be selected if also r0020, r0021 are available on the drive object.

Mode 4 is available for all drive objects.

p0006 BOP operating display mode / BOP op_ disp mode

VECTOR_G, B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	4	4

Description: Sets the mode of the operating display for the Basic Operator Panel (BOP) in the operating states "ready for operation" and "operation".

Value:
0: Operation --> r0021, otherwise r0020 <--> r0021
1: Operation --> r0021, otherwise r0020
2: Operation --> p0005, otherwise p0005 <--> r0020
3: Operation --> r0002, otherwise r0002 <--> r0020
4: p0005

Dependency: See also: p0005

Note: Mode 0 ... 3 can only be selected if also r0020, r0021 are available on the drive object.

Mode 4 is available for all drive objects.

p0007 BOP background lighting / BOP lighting

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [s]	2000 [s]	0 [s]

Description: Sets the delay time until the background lighting of the Basic Operator Panel (BOP) is switched off.

If no keys are actuated, then the background lighting automatically switches itself off after this time has expired.

Note: p0007 = 0: Background lighting is always switched on (factory setting).

p0008 BOP drive object after booting / BOP DO after boot

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	65535	1

Description: Sets the required drive object that is active at the Basic Operator Panel (BOP) after booting.

Note: The value from p0008 initializes the display on the Basic Operator Panel (BOP) at the top left after booting.

The drive object Control Unit is selected using the value 1.

p0009 Device commissioning parameter filter / Dev com par_filt

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: All groups	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	10000	1

Description: Sets the device and basic drive commissioning.

By appropriately setting this parameter, those parameters are filtered that can be written into in the various commissioning steps.

Value:

0: Ready
1: Device configuration
2: Defining the drive type/function module
3: Drive base configuration
4: Data set base configuration
29: Device download
30: Parameter reset
50: Install Technology Extension
55: Install Technology Extension
101: Topology input
111: Insert drive object
112: Delete drive object
113: Change drive object number
114: Change component number
115: Parameter download
117: Delete component
10000: Ready (asynchronous)

Notice: For p0009 = 0:

The check and the calculation can take a longer period of time, so that in the worst case scenario, communication with the commissioning tool is interrupted. As a consequence, alternatively p0009 = 10000 can be used.

For p0009 = 10000:

After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note:

The drives can only be switched on outside the device commissioning (the inverter enabled). In this case, p0009 must be 0 (Ready) and the individual drive objects must have already gone into operation (p0010).

p0009 = 0: ready

When changing into this state, the device configuration is checked and commissioning completed (a new start can be initiated).

p0009 = 1: Device configuration

At the first commissioning of the device, after booting, the device is in the "device configuration" state. To start the internal automatic first commissioning of the drive unit, p0009 should be set to 0 (Ready) after the ID for the actual topology (r0098) was transferred into the ID for the target topology (p0099). To do this, it is sufficient to set a single index value of p0099[x] the same as r0098[x]. Before the device has been completely commissioned, no other parameter can be changed. After the first commissioning was carried out, in this state, when required, other basic device configuration parameters can be adapted (e.g. the basic sampling time in p0110).

p0009 = 2: Defines the drive type / function module

In this state, the drive object types and/or the function modules can be changed or selected for the individual drive objects. To do this, the drive object type can be set using p0107[0...15] and the function can be set using p0108[0...15] (refer to p0101[0...15]).

p0009 = 3: Drive basic configuration

In this state, after the device has been commissioned for the first time, basic changes can be made for the individual drive objects (e.g. sampling times in p0111, p0112, p0115 and the number of data sets in p0120, p0130, p0140, p0170, p0180).

p0009 = 4: Data set basic configuration

In this state, after the device has been commissioned for the first time, for the individual drive objects changes can be made regarding the assignment of the components (p0121, p0131, p0141, p0151, p0161) to the individual data sets and the assignment of the power unit, motor and encoder to the drive data sets (p0185, ...).

p0009 = 29: Device download

In the case of a download via the commissioning tool, the device is automatically brought into this state. After the download has been completed, p0009 is automatically set to 0 (ready). It is not possible to manually set p0009 to this value.

p0009 = 30: Parameter reset

In order to bring the complete unit into the "first commissioning" state or to load the parameters saved using p0977, to start, p0009 must be set to this value. p0976 can then be changed to the required value.

p0009 = 50: configure Technology Extension

After the device has been commissioned for the first time, in this state, Technology Extensions can be activated/deactivated for the individual drive objects (p4956).

p0009 = 55: install Technology Extension

Technology Extensions can be installed/uninstalled in this state.

p0009 = 101: Topology input

In this state, the DRIVE-CLiQ target topology can be entered using p9902 and p9903.

p0009 = 111: Insert drive object

This state allows a new drive object to be inserted using p9911.

p0009 = 112: Delete drive object

This state allows existing drive objects to be deleted using p9912 after the device has been commissioned for the first time.

p0009 = 113: Change drive object number

This state allows the drive object number of existing drive objects to be changed using p9913 after the device has been commissioned for the first time.

p0009 = 114: Change component number

This state allows the component number of existing components to be changed using p9914 after the device has been commissioned for the first time.

p0009 = 115: Parameter download

This state allows the complete device and drive commissioning using the parameter services.

p0009 = 117: Delete component

This state allows components to be deleted using p9917 after the device has been commissioned for the first time.

p0009 = 10000: ready (asynchronous)

When changing into this state, internally p0009 is set = 0. Additional calculations and checks are carried out in the background (asynchronously).

p0010 Drive commissioning parameter filter / Drv com par_filt

VECTOR_G

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 2800, 2818
P group: All groups	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	10000	1

Description: Sets the parameter filter to commission a drive.

Setting this parameter filters out the parameters that can be written into in the various commissioning steps.

Value:
0: Ready
1: Quick commissioning
2: Power unit commissioning
3: Motor commissioning
4: Encoder commissioning
5: Technological application/units
15: Data sets
17: Basic positioner commissioning
25: Position control commissioning
29: Only Siemens internal
30: Parameter reset
95: Safety Integrated commissioning
10000: Ready with immediate feedback signal

Notice: For p0010 = 10000 the following applies:

After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: The drive can only be switched on outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0.

By setting p3900 to a value other than 0, the quick commissioning is completed, and this parameter is automatically reset to 0.

Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 = 10000 corresponds to p0010 = 0. Unlike with p0010 = 0, the parameter modification is applied immediately and the calculations are made in the background. Further parameter modifications cannot be made while the calculations are being performed.

p0010 Infeed commissioning parameter filter / INF com par_filt

B_INF

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: All groups	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	30	1

Description: Sets the parameter filter to commission an infeed unit.

Setting this parameter filters out the parameters that can be written into in the various commissioning steps.

Value:
0: Ready
1: Quick commissioning
2: Power unit commissioning
5: Technological application/units
29: Only Siemens internal
30: Parameter reset

Note: The drive can only be switched on outside the drive commissioning (inverter enable). To realize this, this parameter must be set to 0.

For p3900 not equal to 0, at the end of the quick commissioning, this parameter is automatically reset to 0.

Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 TM120 commissioning parameter filter / TM120 com par_filt

TM120

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Integer16 | **Dyn. index:** - | **Function diagram:** -
P group: All groups | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	30	0

Description: Sets the parameter filter for commissioning a Terminal Module 120 (TM120).
Setting this parameter filters out the parameters that can be written into in the various commissioning steps.
For the BOP, this setting also causes the read access operations to be filtered.

Value:
0: Ready
29: Only Siemens internal
30: Parameter reset

Dependency: See also: p0970

Note: Only the following values are possible: p0010 = 0, 30
Procedure for "Reset parameter": Set p0010 to 30 and p0970 to 1.

p0010 TM150 commissioning parameter filter / TM150 com par_filt

TM150

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1

Description: Sets the password for the Basic Operator Panel (BOP).

Dependency: See also: p0012, p0013

p0012 BOP password acknowledgment (p0013) / BOP pw ackn p13

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: Acknowledges the password for the Basic Operator Panel (BOP).

Dependency: See also: p0011, p0013

p0013[0...49] BOP user-defined list / BOP list

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: Sets the required parameters to read and write via the Basic Operator Panel (BOP).
Activation:
1. p0003 = 3 (expert).
2. p0013[0...49] = requested parameter number.
3. If required, enter p0011 = password in order to prevent non-authorized deactivation.
4. p0016 = 1 --> activates the selected user-defined list.
Deactivation/change:
1. p0003 = 3 (expert).
2. If required, p0012 = p0011, in order to be authorized to change or deactivate the list.
3. If required p0013[0...49] = required parameter number.
4. p0016 = 1 --> activates the modified user-defined list.
5. p0003 = 0 --> deactivates the user-defined list.

Dependency: See also: p0009, p0011, p0012, p0976

Note: The following parameters can be read and written on the Control Unit drive object:
- p0003 (access stage)
- p0009 (device commissioning, parameter filter)
- p0012 (BOP password acknowledgment (p0013))

The following applies for the user-defined list:
- password protection is only available on the drive object Control Unit and is valid for all of the drive objects.
- p0013 cannot be included in the user-defined list for all drive objects.
- p0003, p0009, p0011, p0012, p0976 cannot, for the drive object Control Unit, be included in the user-defined list.
- the user-defined list can be cleared and deactivated "restore factory setting".

A value of 0 means: Entry is empty.

p0015 Macro drive unit / Macro drv unit

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	999999	1

Description: Runs the corresponding macro files.
The selected macro file must be available on the memory card/device memory.
Example:
p0015 = 6 --> the macro file PM000006.ACX is run.

Dependency: See also: p0700, p1000, p1500, r8570

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.
When executing a specific macro, the corresponding programmed settings are made and become active.

Note: The macros in the specified directory are displayed in r8570. r8570 is not in the expert list of the commissioning tool.
Macros available as standard are described in the technical documentation of the particular product.

p0015 Macro drive object / Macro DO

VECTOR_G, B_INF, TM31, TM120, TM150

Can be changed: C2(1)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	999999	0

Description: Runs the corresponding macro files.
The selected macro file must be available on the memory card/device memory.
Example:
p0015 = 6 --> the macro file PM000006.ACX is run.

Dependency: See also: p0700, p1000, p1500, r8570

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.
When executing a specific macro, the corresponding programmed settings are made and become active.
No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!

Note: The macros in the specified directory are displayed in r8570. r8570 is not in the expert list of the commissioning tool.
Macros available as standard are described in the technical documentation of the particular product.

p0016 Activate BOP user-defined list / BOP user list act

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1, U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: All groups	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Setting for activating/deactivating the user-defined list for the Basic Operator Panel (BOP).
If p0016 = 1, then it is only possible to access parameters in the parameter list (p0013).

Value:
0: BOP user-defined list deactivated
1: BOP user-defined list activated

Dependency: See also: p0011, p0012, p0013

Note: The user-defined list can only be deactivated with p0011 = p0012

r0018 Control Unit firmware version / CU FW version

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	4294967295	-

Description: Displays the firmware version of the Control Unit.

Dependency: See also: r0128, r0148, r0158, r0197, r0198

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0019.0...14 CO/BO: Control word BOP / STW BOP

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 9912
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the control word for the Basic Operator Panel (BOP).

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	ON / OFF (OFF1)	ON	OFF (OFF1)	-
01	No coast-down / coast-down (OFF2)	No coast down	Coast down (OFF2)	-
02	No Quick Stop / Quick Stop (OFF3)	No Quick Stop	Quick Stop (OFF3)	-
07	Acknowledge fault (0 -> 1)	Yes	No	-
13	Motorized potentiometer raise	Yes	No	-
14	Motorized potentiometer lower	Yes	No	-

r0020 Speed setpoint smoothed / n_set smth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5020, 6799
P group: Displays, signals	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the currently smoothed speed setpoint at the input of the speed controller or U/f characteristic (after the interpolator).

Dependency: See also: r0060

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The speed setpoint is available smoothed (r0020) and unsmoothed (r0060).

r0021 CO: Actual speed smoothed / n_act smth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6799
P group: Displays, signals	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the smoothed actual value of the motor speed.
Frequency components from the slip compensation (for induction motors) are not included.

Dependency: See also: r0022, r0063

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).

r0022 Speed actual value rpm smoothed / n_ActV rpm smth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6799
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the smoothed actual value of the motor speed.
Frequency components from the slip compensation (for induction motors) are not included.
r0022 is identical to r0021, however, it always has units of rpm and contrary to r0021 cannot be changed over.

Dependency: See also: r0021, r0063

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The speed actual value is available smoothed (r0021, r0022) and unsmoothed (r0063).

r0024 Output frequency smoothed / f_outp smooth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6300, 6799
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the smoothed output frequency.
Frequency components from the slip compensation (for induction motors) are included.

Dependency: See also: r0066

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The output frequency is available smoothed (r0024) and unsmoothed (r0066).

r0025 CO: Output voltage smoothed / U_outp smooth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5730, 6300, 6799
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the smoothed output voltage of the power unit.

Dependency: See also: r0072

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The output voltage is available smoothed (r0025) and unsmoothed (r0072).

r0026 CO: DC link voltage smoothed / Vdc smth

VECTOR_G

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 6799, 8750, 8850, 8950
P group: Displays, signals
Unit group: -
Unit selection: -
Not for motor type: -
Scaling: p2001
Expert list: 1
Min:
Max:
Factory setting:
- [V]
- [V]
- [V]

Description: Displays the smoothed actual value of the DC link voltage.

Dependency: See also: r0070

Notice: For SINAMICS S120 AC Drive (AC/AC) the following applies:
When measuring a DC link voltage < 200 V, for the Power Module (e.g. PM340) a valid measured value is not supplied. In this case, when an external 24 V power supply is connected, a value of approx. 24 V is displayed in the display parameter.

Note: SERVO, VECTOR: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).

r0026 CO: DC link voltage smoothed / Vdc smth

B_INF

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 5730, 6799, 8750, 8850, 8950
P group: Displays, signals
Unit group: -
Unit selection: -
Not for motor type: -
Scaling: p2001
Expert list: 1
Min:
Max:
Factory setting:
- [V]
- [V]
- [V]

Description: Displays the smoothed actual value of the DC link voltage.

Dependency: See also: r0070

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

Note: A_INF, B_INF, S_INF: smoothing time constant = 300 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The DC link voltage is available smoothed (r0026) and unsmoothed (r0070).

r0027 CO: Absolute actual current smoothed / I_act AbsV smth

VECTOR_G

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 5730, 6799, 8850, 8950
P group: Displays, signals
Unit group: -
Unit selection: -
Not for motor type: -
Scaling: p2002
Expert list: 1
Min:
Max:
Factory setting:
- [Arms]
- [Arms]
- [Arms]

Description: Displays the smoothed absolute current actual value.

Dependency: See also: r0068

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

Note: A_INF, S_INF, VECTOR: Smoothing time constant = 300 ms
SERVO: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).

r0027 CO: Absolute actual current smoothed / I_act AbsV smth

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8750
P group: Displays, signals	**Unit group:** 6_4	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [A]	- [A]	- [A]

Description: Displays the smoothed absolute current actual value.

Dependency: See also: r0068

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.

Note: Smoothing time constant = 300 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The absolute current actual value is available smoothed (r0027) and unsmoothed (r0068).

r0028 Modulation depth smoothed / mod_depth smth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5730, 6799, 8950
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: Displays the smoothed actual value of the modulation depth.

Dependency: See also: r0074

Note: A_INF: Smoothing time constant = 300 ms

SERVO, VECTOR: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The modulation depth is available smoothed (r0028) and unsmoothed (r0074).

r0029 Current actual value field-generating smoothed / Id_act smth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5730, 6799
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed field-generating actual current.

Dependency: See also: r0076

Note: SERVO: Smoothing time constant = 100 ms

VECTOR: Smoothing time constant = 300 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The field-generating current actual value is available smoothed (r0029) and unsmoothed (r0076).

r0030 Current actual value torque-generating smoothed / Iq_act smth

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5730, 6799
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the smoothed torque-generating actual current.

Dependency: See also: r0078

Note: SERVO: Smoothing time constant = 100 ms

VECTOR: Smoothing time constant = 300 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The following applies for SERVO:

The torque-generating current actual value is available smoothed (r0030 with 100 ms, r0078[1] with p0045) and unsmoothed (r0078[0]).

The following applies for VECTOR:

The torque-generating current actual value is available smoothed (r0030 with 300 ms) and unsmoothed (r0078).

r0031 Actual torque smoothed / M_act smth

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5730, 6799
	P group: Displays, signals	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Nm]	- [Nm]	- [Nm]

Description: Displays the smoothed torque actual value.

Dependency: See also: r0080

Note: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The torque actual value is available smoothed (r0031) and unsmoothed (r0080).

r0032 CO: Active power actual value smoothed / P_ActV_act smth

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5730, 6799, 8750, 8850, 8950
	P group: Displays, signals	**Unit group:** 14_10	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** r2004	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [kW]	- [kW]	- [kW]

Description: Display and connector output for the smoothed actual value of the active power.

Dependency: See also: r0082

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

Note: Significance for the drive: Power output at the motor shaft

Significance for the infeed: Line power drawn

For A_INF, B_INF and S_INF the following applies:

The active power is available smoothed (r0032 with 300 ms) and unsmoothed (r0082).

The following applies for SERVO:

The active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]).

For VECTOR and VECTORMV, the following applies:

The active power is available smoothed (r0032 with 100 ms) and unsmoothed (r0082).

r0032 CO: Active power actual value smoothed / P_ActV_act smth

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5730, 6799, 8750, 8850, 8950
P group: Displays, signals	**Unit group:** 14_10	**Unit selection:** p0505
Not for motor type: -	**Scaling:** r2004	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [kW]	- [kW]	- [kW]

Description: Display and connector output for the smoothed actual value of the active power.

Dependency: See also: r0082

Notice: This smoothed signal is not suitable for diagnostics or evaluation of dynamic operations. In this case, the unsmoothed value should be used.

For Basic Line Modules of chassis format, the displayed value is invalid as these units do not have any current sensing.

Note: Significance for the drive: Power output at the motor shaft

Significance for the infeed: Line power drawn

For A_INF, B_INF and S_INF the following applies:

The active power is available smoothed (r0032 with 300 ms) and unsmoothed (r0082).

The following applies for SERVO:

The active power is available smoothed (r0032 with 100 ms, r0082[1] with p0045) and unsmoothed (r0082[0]).

For VECTOR and VECTORMV, the following applies:

The active power is available smoothed (r0032 with 100 ms) and unsmoothed (r0082).

r0033 Torque utilization smoothed / M_util smth

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8012
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: Displays the smoothed torque utilization as a percentage.

The torque utilization is obtained from the required smoothed torque in reference to the torque limit, scaled using p2196.

Note: Smoothing time constant = 100 ms

The signal is not suitable as a process quantity and may only be used as a display quantity.

The torque utilization is available smoothed (r0033) and unsmoothed (r0081).

For M_set total (r0079) > 0, the following applies:

- Required torque = M_set total
- Actual torque limit = M_max upper effective (r1538)

For M_set total (r0079) <= 0, the following applies:

- Required torque = - M_set total
- Actual torque limit = - M_max lower effective (r1539)

For the actual torque limit = 0, the following applies: r0033 = 100 %

For the actual torque limit < 0, the following applies: r0033 = 0 %

r0034 CO: Motor utilization thermal / Mot_util therm

VECTOR_G

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 8017, 8019
P group: Displays, signals
Unit group: -
Unit selection: -
Not for motor type: ASM, SESM, REL
Scaling: PERCENT
Expert list: 1
Min:
Max:
Factory setting:
- [%]
- [%]
- [%]

Description: Display and connector output for the motor utilization from motor temperature model 1 (I2t) or 3.
For motor temperature model 1 (I2t) (p0612.0 = 1), the following applies:
For firmware version < 4.7 SP6:
- r0034 = (motor model temperature - 40 °C) / (p0605 - 40 °C) * 100 %
From firmware version 4.7 SP6:
- p0612.12 = 0 and p0612.8 = 0: r0034 = (motor model temperature - 40 °C) / (p0605 - 40 °C) * 100 %
- p0612.12 = 0 and p0612.8 = 1: r0034 = (motor model temperature - 40 °C) / p0627 * 100 %
- p0612.12 = 1 and p0612.8 = 0: r0034 = (motor model temperature - p0613) / (p0605 - p0613) * 100 %
- p0612.12 = 1 and p0612.8 = 1: r0034 = (motor model temperature - p0613) / p0627 * 100 %
For motor temperature model 3 (p0612.2 = 1), the following applies:
- r0034 = (motor model temperature - r5397) / (r5398 - r5397) * 100 %

Dependency: The thermal motor utilization is only determined when the motor temperature model 1 (I2t) or 3 is activated.
The following conditions are a prerequisite for additional information.
- a temperature sensor has not been parameterized (p0600, p0601).
- the current corresponds to the stall current (p0318).
- speed n > 1 [rpm].
For firmware version < 4.7 SP6 or p0612.12 = 0, the following applies:
- the temperature model operates with an ambient temperature of 20 °C.
A motor utilization of 100% is displayed (r0034 = 100 %) when the following conditions are permanently fulfilled:
- the ambient temperature is 40 °C (model 1: p0625 = 40 °C, model 3: p0613 = 40 °C).
From firmware version 4.7 SP6 and p0612.12 = 1, the following applies:
- the ambient temperature can be adapted to the conditions using p0613.
See also: p0605, p0611, p0612, p0613, p0627, r0632
See also: F07011, A07012

Notice: After the drive is switched on, the system starts to determine the motor temperature with an assumed model value. This means that the value for the motor utilization is only valid after a stabilization time.

Note: Smoothing time constant = 100 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
For r0034 = -200.0 %, the following applies:
The value is invalid (e.g. the motor temperature model is not activated or has been incorrectly parameterized).

r0035 CO: Motor temperature / Mot temp

VECTOR_G

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 8016, 8017
P group: Displays, signals
Unit group: 21_1
Unit selection: p0505
Not for motor type: -
Scaling: p2006
Expert list: 1
Min:
Max:
Factory setting:
- [°C]
- [°C]
- [°C]

Description: Display and connector output for the actual temperature in the motor.

Note: For r0035 not equal to -200.0 °C, the following applies:
- this temperature display is valid.
- a KTY/PT1000 temperature sensor is connected.
- the thermal model for the induction motor is activated (p0612 bit 1 = 1 and temperature sensor deactivated: p0600 = 0 or p0601 = 0).

For r0035 equal to -200.0 °C, the following applies:
- this temperature display is not valid (temperature sensor error).
- a PTC sensor or bimetallic NC contact is connected.
- the temperature sensor of the synchronous motor is deactivated (p0600 = 0 or p0601 = 0).

r0035 CO: Temperature input / Temp_input

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8750
P group: Displays, signals	**Unit group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [°C]	- [°C]	- [°C]

Description: Displays the temperature currently measured at X21 (booksize) or X41 (chassis).
For a BLM with internal Braking Module, a bimetallic sensor must be connected up to monitor the temperature of the braking resistor. The temperature sensor type is indicated using p0601 and cannot be changed for the existing internal Braking Module.
Temperature within permissible limit values: r0035 = -50°C
Temperature outside the permissible limit values: r0035 = 250°C

Dependency: See also: F06907, F06908

Notice: The function in r0192.11 must be available in order to obtain a correct display.

Note: For r0035 equal to -200.0 °C, the following applies:
- "no sensor" selected in p0601!

For r0035 equal to -300.0 °C, the following applies:
- a KTY/PT1000 is selected in p0601 but is not connected!
- the temperature display is not valid (temperature sensor error)!

r0036 CO: Power unit overload I2t / PU overload I2t

VECTOR_G, B_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8021
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: Displays the power unit overload determined using the I2t calculation.
A current reference value is defined for the I2t monitoring of the power unit. It represents the current that can be conducted by the power unit without any influence of the switching losses (e.g. the continuously permissible current of the capacitors, inductances, busbars, etc.).
If the I2t reference current of the power unit is not exceeded, then an overload (0 %) is not displayed.
In the other case, the degree of thermal overload is calculated, whereby 100% results in a trip.

Dependency: See also: p0290, p0294
See also: F30005

r0037[0...1] Control Unit temperature / CU temp

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Description: Displays the measured Control Unit temperature.
An appropriate message is output when the permitted operating temperature is exceeded.

Index: [0] = Actual measured value
[1] = Maximum measured value

Dependency: See also: A01009

Notice: Only for internal Siemens troubleshooting.

Note: The value of -200 indicates that there is no measuring signal.

r0037[0...20] CO: Power unit temperatures / PU temperatures

VECTOR_G, B_INF

Can be changed: -
Data type: FloatingPoint32
P group: Displays, signals
Not for motor type: -
Min:
- [°C]

Calculated: -
Dyn. index: -
Unit group: 21_1
Scaling: p2006
Max:
- [°C]

Access level: 3
Function diagram: 8021
Unit selection: p0505
Expert list: 1
Factory setting:
- [°C]

Description: Display and connector output for the temperature in the power unit.

Index: [0] = Inverter maximum value
[1] = Depletion layer maximum value
[2] = Rectifier maximum value
[3] = Air intake
[4] = Interior of power unit
[5] = Inverter 1
[6] = Inverter 2
[7] = Inverter 3
[8] = Inverter 4
[9] = Inverter 5
[10] = Inverter 6
[11] = Rectifier 1
[12] = Rectifier 2
[13] = Depletion layer 1
[14] = Depletion layer 2
[15] = Depletion layer 3
[16] = Depletion layer 4
[17] = Depletion layer 5
[18] = Depletion layer 6
[19] = Cooling unit liquid intake
[20] = Capacitor air discharge

Notice: Only for internal Siemens troubleshooting.

Note: The value of -200 indicates that there is no measuring signal.
r0037[0]: Maximum value of the inverter temperatures (r0037[5...10]).
r0037[1]: Maximum value of the depletion layer temperatures (r0037[13...18]).
r0037[2]: Maximum value of the rectifier temperatures (r0037[11...12]).
r0037[20]: the measured value is only determined for r0193.13 = 1.
In the case of a fault, the particular shutdown threshold depends on the power unit, and cannot be read out.

r0038 Power factor smoothed / Cos phi smooth

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6799, 8850, 8950
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the smoothed actual power factor.

Notice: For infeed units, the following applies:
For active powers < 25 % of the rated power, this does not provide any useful information.

Note: Smoothing time constant = 300 ms
The signal is not suitable as a process quantity and may only be used as a display quantity.
Meaning for motor:
- power factor of the basic fundamental signals at the converter output.
Meaning for infeed:
- Power factor at the connection point (r3470, r3471)

r0039[0...2] CO: Energy display / Energy disp

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [kWh]	- [kWh]	- [kWh]

Description: Display and connector output for the energy values at the output terminals of the power unit.

Recommendation: r0042 should be used as process energy display.

Index: [0] = Energy balance (sum)
[1] = Energy drawn
[2] = Energy fed back

Dependency: See also: p0040

Note: For a BICO interconnection, signal source r0039 supplies the floating-point value in Ws.
For index [0]:
Difference between the energy drawn and energy that is fed back.

p0040 Reset energy consumption display / Energy usage reset

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Setting to reset the display in r0039 and r0041.
Procedure:
Set p0040 = 0 --> 1
The displays are reset and the parameter is automatically set to zero.

Dependency: See also: r0039

r0041 Energy consumption saved / Energy cons saved

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [kWh]	- [kWh]	- [kWh]

Description: Displays the saved energy referred to 100 operating hours.

Dependency: See also: p0040

Note: This display is used for a fluid-flow machine.
The flow characteristic is entered into p3320 ... p3329.
For an operating time of below 100 hours, the display is interpolated up to 100 hours.

r0042[0...2] CO: Process energy display / Proc energy disp

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Integer32	**Dyn. index:** -	**Function diagram:** -
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Wh]	- [Wh]	- [Wh]

Description: Display and connector output for the energy values at the output terminals of the power unit.

Index: [0] = Energy balance (sum)
[1] = Energy drawn
[2] = Energy fed back

Dependency: See also: p0043

Note: The signal can be displayed as process variable (scaling: 1 = 1 Wh).
This is enabled in p0043.
The display is also reset with p0040 = 1.
If an enable is present in r0043 when the Control Unit powers up, then the value from r0039 is transferred into r0042.
As r0039 serves as a reference signal for r0042, due to format reasons, the process energy display can only process values of r0039 up to 2147483 kWh. r0039 should also be reset using this value.

p0043 BI: Enable energy usage display / Enab energy usage

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
	P group: Communications	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to enable/reset the process energy display in r0042.
BI: p0043 = 1 signal:
The process energy display is enabled in r0042.

Dependency: See also: r0042

p0045 Display values smoothing time constant / Disp_val Tc_smth

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 2

Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** 4715, 5610, 5730, 6714, 8012

P group: - | **Unit group:** - | **Unit selection:** -

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.00 [ms]	10000.00 [ms]	1.00 [ms]

Description: Sets the smoothing time constant for the following display values:
SERVO: r0078[1], r0079[1], r0081 (calculated from the quantities smoothed with p0045), r0082[1].
VECTOR: r0063[1], r0068[1], r0080[1], r0082[1].

r0046.0...31 CO/BO: Missing enable signal / Missing enable sig

VECTOR_G

Can be changed: - | **Calculated:** - | **Access level:** 1

Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** 2634

P group: Displays, signals | **Unit group:** - | **Unit selection:** -

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	-

Description: Display and BICO output for missing enable signals that are preventing the closed-loop drive control from being commissioned.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	OFF1 enable missing	Yes	No	7954
01	OFF2 enable missing	Yes	No	-
02	OFF3 enable missing	Yes	No	-
03	Operation enable missing	Yes	No	-
04	Armature short-circuit / DC braking enable missing	Yes	No	-
05	STOP2 enable missing	Yes	No	-
08	Safety enable missing	Yes	No	-
09	Infeed enable missing	Yes	No	-
10	Ramp-function generator enable missing	Yes	No	-
11	Ramp-function generator start missing	Yes	No	-
12	Setpoint enable missing	Yes	No	-
15	QuickStop enable missing	Yes	No	-
16	OFF1 enable internal missing	Yes	No	-
17	OFF2 enable internal missing	Yes	No	-
18	OFF3 enable internal missing	Yes	No	-
19	Pulse enable internal missing	Yes	No	-
20	Armature short-circuit/DC braking internal enable missing	Yes	No	-
21	STOP2 enable internal missing	Yes	No	-
25	Function bypass active	Yes	No	-
26	Drive inactive or not operational	Yes	No	-
27	De-magnetizing not completed	Yes	No	-
28	Brake open missing	Yes	No	-
29	Cooling unit ready signal missing	Yes	No	-
30	Speed controller inhibited	Yes	No	-
31	Jog setpoint active	Yes	No	-

Dependency: See also: r0002

Note:

The value r0046 = 0 indicates that all enable signals for this drive are present.

Bit 00 = 1 (enable signal missing), if:

- the signal source in p0840 is a 0 signal.
- there is a "switching on inhibited".

Bit 01 = 1 (enable signal missing), if:

- the signal source in p0844 or p0845 is a 0 signal.

Bit 02 = 1 (enable signal missing), if:

- the signal source in p0848 or p0849 is a 0 signal.

Bit 03 = 1 (enable signal missing), if:

- the signal source in p0852 is a 0 signal.

Bit 04 =1 (armature short-circuit active), if:

- the signal source in p1230 has a 1 signal

Bit 05, Bit 06: Being prepared

Bit 08 = 1 (enable signal missing), if:

- safety functions have been enabled and STO is active.
- a safety-relevant signal is present with a STOP A response.

STO enabled via terminals:

- the pulse enable via terminal EP is missing (booksize: X21, chassis: X41), or the signal source in p9620 is for a 0 signal.

STO enabled via PROFIsafe or TM54F:

- STO is selected via PROFIsafe or TM54F.

Bit 09 = 1 (enable signal missing), if:

- the signal source in p0864 is a 0 signal.

Bit 10 = 1 (enable signal missing), if:

- the signal source in p1140 is a 0 signal.

Bit 11 = 1 (enable signal missing) if the speed setpoint is frozen, because:

- the signal source in p1141 is a 0 signal.
- the speed setpoint is entered from jogging and the two signal sources for jogging, bit 0 (p1055) and bit 1 (p1056) have a 1 signal.

Bit 12 = 1 (enable signal missing), if:

- the signal source in p1142 is a 0 signal.
- When activating the function module "basic positioner" (r0108.4 = 1), the signal source in p1142 is set to a 0 signal.

Bit 16 = 1 (enable signal missing), if:

- there is an OFF1 fault response. The system is only enabled if the fault is removed and was acknowledged and the "switching on inhibited" withdrawn with OFF1 = 0.

Bit 17 = 1 (enable signal missing), if:

- commissioning mode is selected (p0009 > 0 or p0010 > 0).
- there is an OFF2 fault response.
- the drive is inactive (p0105 = 0) or is not operational (r7850[DO-Index]=0).

Bit 18 = 1 (enable signal missing), if:

- OFF3 has still not been completed or an OFF3 fault response is present.

Bit 19 = 1 (internal pulse enable missing), if:

- synchronization is running between the basic clock cycle, DRIVE-CLiQ clock cycle and application clock cycle.

Bit 20 =1 (internal armature short-circuit active), if:

- the drive is not in the state "S4: Operation" or "S5x" (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

Bit 21 = 1 (enable signal missing), if:

The pulses have been enabled and the speed setpoint has still not been enabled, because:

- the holding brake opening time (p1216) has still not expired.
- the motor has still not been magnetized (induction motor).
- the encoder has not been calibrated (U/f vector and synchronous motor)

Bit 22: Being prepared

Bit 26 = 1 (enable signal missing), if:

- the drive is inactive (p0105 = 0) or is not operational (r7850[DO-Index]=0).
- the function "parking axis" is selected (BI: p0897 = 1 signal)..

- all power units of a parallel connection are deactivated (p0125, p0895).
- the drive device is in the "PROFIenergy energy-saving mode" (r5600, CU-specific).

Bit 27 = 1 (enable signal missing), if:
- de-magnetizing has still not been completed (only for vector).

Bit 28 = 1 (enable signal missing), if:
- the holding brake is closed or has still not been opened.

Bit 29 = 1 (enable signal missing), if:
- the cooling unit ready signal via binector input p0266[1] missing.

Bit 30 = 1 (speed controller inhibited), if one of the following reasons is present:
- a 0 signal is available via binector input p0856.
- the function generator with current input is active.
- the measuring function "current controller reference frequency characteristic" is active.
- the pole position identification is active.
- motor data identification is active (only certain steps).

Bit 31 = 1 (enable signal missing), if:
- the speed setpoint from jog 1 or 2 is entered.

r0046.0...29 CO/BO: Missing enable signal / Missing enable sig

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 8734
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for missing enable signals that are preventing the closed-loop infeed control from being commissioned.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	OFF1 enable missing	Yes	No	-
01	OFF2 enable missing	Yes	No	-
08	EP terminals enable missing	Yes	No	-
16	OFF1 enable internal missing	Yes	No	-
17	OFF2 enable internal missing	Yes	No	-
26	Infeed inactive or not operational	Yes	No	-
29	Cooling unit ready signal missing	Yes	No	-

Dependency: See also: r0002

Note: The value r0046 = 0 indicates that all enable signals for the infeed are present.

Bit 00 = 1 (enable signal missing), if:
- the signal source in p0840 is a 0 signal.
- there is a "switching on inhibited".

Bit 01 = 1 (enable signal missing), if:
- the signal source in p0844 or p0845 is a 0 signal.

Bit 16 = 1 (enable signal missing), if:
- there is an OFF1 fault response. The system is only enabled if the fault is removed and was acknowledged and the "switching on inhibited" withdrawn with OFF1 = 0.

Bit 17 = 1 (enable signal missing), if:
- the commissioning mode is selected (p0009 > 0 or p0010 > 0) or there is an OFF2 fault response or the OFF1 signal source (p0840) is changed.

Bit 26 = 1 (enable signal missing), if:
- the infeed is inactive (p0105 = 0) or is not operational (r7850[DO-Index]=0).
- the infeed is in the "PROFIenergy energy-saving mode" (r5600, CU-specific).

Bit 29 = 1 (enable signal missing), if:
- the cooling unit ready signal via binector input p0266[1] missing.

r0047 Motor data identification and speed controller optimization / MotID and n_opt

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	300	-

Description: Displays the actual status for the motor data identification (stationary measurement) and the speed/velocity controller optimization (rotating measurement).

Value:
0: No measurement
115: Measurement q leakage inductance (part 2)
120: Speed controller optimization (vibration test)
140: Calculate speed controller setting
150: Measurement moment of inertia
170: Measurement magnetizing current and saturation characteristic
190: Speed encoder test
195: Measurement q leakage inductance (part 1)
200: Rotating measurement selected
210: Pole position identification selected
220: identification leakage inductance
230: Identification rotor time constant
240: Identification stator inductance
250: Identification stator inductance LQLD
260: Identification circuit
270: Identification stator resistance
290: Identification valve lockout time
300: Stationary measurement selected

Note: For r0047 = 300:
This value is also displayed if encoder calibration p1990 is selected.

r0049[0...3] Motor data set/encoder data set effective / MDS/EDS effective

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8565
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -

Scaling: p2000
Expert list: 1
Min:
Max:
Factory setting:
- [rpm]
- [rpm]
- [rpm]

Description: Display and connector output for the speed actual value.
Frequency components from the slip compensation (for induction motors) are not included.
For U/f control and when slip compensation is deactivated (see p1335), the synchronous speed to the output frequency is shown in r0063[0].

Index: [0] = Unsmoothed
[1] = Smoothed with p0045
[2] = Calculated from f_set - f_slip (unsmoothed)

Dependency: See also: r0021, r0022

Note: The speed actual value is calculated in encoderless operation and for U/f control.
For operation with encoder, r0063[0] is smoothed with p1441.
The speed actual value r0063[0] – smoothed with p0045 – is additionally displayed in r0063[1]. r0063[1] can be used as process variable for the appropriate smoothing time constant p0045.
The speed (r0063[2]) calculated from the output frequency and slip can only be compared with the speed actual value (r0063[0]) in the steady-state.
The actual speed (r0063[0]) is available as a display quantity with additional smoothing in r0021.
For U/f control, the mechanical speed calculated from the output frequency and the slip is shown in r0063[2] even if slip compensation is deactivated.

r0064 CO: Speed controller system deviation / n_ctrl SysDev

VECTOR_G

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 5040, 6040
P group: Displays, signals
Unit group: 3_1
Unit selection: p0505

Dyn. index: -
Function diagram: 6723, 6724, 6725
P group: Modulation
Unit group: -
Unit selection: -
Not for motor type: -
Scaling: PERCENT
Expert list: 1
Min: - [%]
Max: - [%]
Factory setting: - [%]

Description: Displays the maximum modulation depth.
Dependency: See also: p1803

r0074 CO: Modulation depth / mod_depth

VECTOR_G

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 5730, 6730, 6731, 6799, 8940, 8950
P group: Displays, signals
Unit group: -
Unit selection: -
Not for motor type: -
Scaling: PERCENT
Expert list: 1
Min: - [%]
Max: - [%]
Factory setting: - [%]

Description: Display and connector output for the actual modulation depth.
Dependency: See also: r0028
Note: For space vector modulation, 100% corresponds to the maximum output voltage without overcontrol.
Values above 100% indicate an overcontrol condition - values below 100% have no overcontrol.
The phase voltage (phase-to-phase, rms) is calculated as follows:(r0074 x r0070) / (sqrt(2) x 100 %).
The modulation depth is available smoothed (r0028) and unsmoothed (r0074).

r0075 CO: Current setpoint field-generating / Id_set

Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [V]	- [V]	- [V]

Description: Displays the actual phase voltage.

Index: [0] = Phase U
[1] = Phase V
[2] = Phase W

Note: The values are determined from the transistor switch-on duration.

p0092 Clock synchronous operation pre-assignment/check / Clk sync op pre-as

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(1)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Setting to pre-assign/check the sampling times for the internal controller clock cycles for isochronous PROFIdrive operation.

For p0092 = 0:

The controller clock cycles are set without any restrictions by the isochronous PROFIdrive operation (same as for up to V2.3).

When calculating the drive unit utilization (r9976), when using the fixed DCC runtime groups "Receive AFTER IF1 PROFIdrive PZD", "Send BEFORE IF1 PROFIdrive PZD", "Receive AFTER IF2 PZD" (from V4.4) and "Send BEFORE IF2 PZD" (from V4.4), then its maximum computing time load has already been calculated during ramp-up for isochronous operation and taken into account in r9976 (from V4.3).

For p0092 = 1:

The controller clock cycles are set so that isochronous PROFIdrive operation is possible. If it is not possible to change the controller clock cycles of the isochronous PROFIdrive operation, then an appropriate message is output.

The pre-setting of the controller clock cycles can result in a derating of the Motor Module (e.g. p0115[0] = 400 µs --> 375 µs).

When calculating the drive unit utilization (r9976), when using the fixed DCC runtime groups "Receive AFTER IF1 PROFIdrive PZD", "Send BEFORE IF1 PROFIdrive PZD", "Receive AFTER IF2 PZD" (from V4.4) and "Send BEFORE IF2 PZD" (from V4.4), then its maximum computing time load has already been calculated during ramp-up for isochronous operation and taken into account in r9976 (from V4.3).

Value:
0: No isochronous PROFIBUS
1: Isochronous PROFIBUS

Dependency: See also: r0110, p0115

See also: A01223, A01224

Caution:

Only current controller sampling times (p0115[0]) which are integers of 125 µs are permitted for isochronous mode.

For SERVO the following current controller sampling times are also possible:

187.5, 150, 100, 93.75, 75, 62.5, 50, 37.5, 31.25 µs

For VECTOR the following current controller sampling times are also possible:

312.5, 218.75, 200, 187.5, 175, 156.25, 150, 137.5 µs

The additional current controller sampling times must be taken into account when parameterizing the bus for Ti, To and Tdp.

Notice: p0092 only has an influence on the automatic default for the sampling times (p0115) in the drive.

If the sampling times are modified subsequently in expert mode (p0112 = 0), p0092 = 0 should be set so that the new values are not overwritten again by the automatic default when the parameters are downloaded.

The conditions for current controller sampling time for isochronous operation must still be carefully ensured (refer under Caution!).

r0094 CO: Transformation angle / Transformat_angle

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 4700, 4702, 4710, 6300, 6714, 6730, 6731, 6732
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2005	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [°]	- [°]	- [°]

Description: Displays the transformation angle.

Dependency: See also: p0431, r1778

Note: The transformation angle corresponds to the electrical commutation angle.

If no pole position identification is carried out (p1982), and the encoder is adjusted, the following applies:

The encoder supplies the value and indicates the electrical angle of the flux position (d axis).

p0097 Select drive object type / Select DO type

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(1)	**Calculated:** -	**Access level:** 1

0	24	0

Description: Executes an automatic device configuration.

In so doing, p0099, p0107 and p0108 are appropriately set.

Value:
0: No selection
1: Drive object type SERVO
2: Drive object type VECTOR
3: SINAMICS GM (DFEMV & VECTORMV)
4: SINAMICS SM (AFEMV & VECTORMV)
5: SINAMICS GL (VECTORGL)
6: SINAMICS SL (VECTORSL)
12: Drive object type VECTOR parallel circuit
13: Drive object type VECTORMV - GM parallel circuit
14: Drive object type VECTORMV - SM parallel circuit
15: Drive object type DC_CTRL
16: Drive object type SERVO HMI
17: Drive object type VECTOR HMI
24: Drive object type VECTORMV - SM parallel circuit

Dependency: See also: r0098, p0099

See also: A01330

Note: For p0097 = 0, p0099 is automatically set to the factory setting.

The possible settings are dependent upon the device type.

Using parameter p9940.2, for SERVO (value = 1) and VECTOR (value = 2) drive objects, the infeed units can be connected in parallel.

r0098[0...5] Actual device topology / Device_act topo

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Topology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the automatically detected actual device topology in coded form.

Index:
[0] = DRIVE-CLiQ socket X100
[1] = DRIVE-CLiQ socket X101
[2] = DRIVE-CLiQ socket X102
[3] = DRIVE-CLiQ socket X103
[4] = DRIVE-CLiQ socket X104
[5] = DRIVE-CLiQ socket X105

Dependency: See also: p0097, p0099

Note: Topology coding: abcd efgh hex

a = number of Active Line Modules

b = number of Motor Modules

c = number of motors

d = number of encoders (or the line voltage sensing for Active Line Modules)

e = number of additional encoders (or the line voltage sensing for Active Line Modules)

f = number of Terminal Modules

g = number of Terminal Boards

h = reserved

if the value 0 is displayed in all indices, then components are not detected via DRIVE-CLiQ.

If a value F hex occurs at a position of the coding (abcd efgh hex), then an overflow has occurred.

p0099[0...5] Device target topology / Device_target topo

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(1)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Topology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0000 hex	FFFF FFFF hex	0000 hex

Description: Sets the device target topology in coded form (refer to r0098). The setting is made during commissioning.

Deactivated or non-available components are also counted

Index:
[0] = DRIVE-CLiQ socket X100
[1] = DRIVE-CLiQ socket X101
[2] = DRIVE-CLiQ socket X102
[3] = DRIVE-CLiQ socket X103
[4] = DRIVE-CLiQ socket X104
[5] = DRIVE-CLiQ socket X105

Dependency: The parameter can only be written into for p0097 = 0.

To perform an automatic device configuration run, an index of the device target topology must be set to the value of the device actual topology in r0098 for acknowledgment. An index of the device actual topology with a value other than 0 must be selected.

See also: p0097, r0098

See also: A01330

Note: The parameter can only be set to the values 0, the value of the actual device topology, the value of the actual device target topology and FFFFFFFF hex.

If the value 0 is displayed in all of the indices, then the system has still not been commissioned.

The value FFFFFFFF hex indicates that the topology was not generated by the automatic device configuration, but was commissioned using the commissioning tool (e.g. using parameter download).

p0100 IEC/NEMA Standards / IEC/NEMA Standards

VECTOR_G

Can be changed: C2(1, 2)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: SESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Defines whether the converter and motor power settings (e.g. rated motor power, p0307) are expressed in [kW] or [hp].

Depending on the selection, the rated motor frequency (p0310) is either set to 50 Hz or 60 Hz.

For p0100 = 0, the following applies: The power factor (p0308) should be parameterized.

For p0100 = 1, the following applies: The efficiency (p0309) should be parameterized.

Value:
0: IEC (50 Hz line, SI units)
1: NEMA (60 Hz line, US units)

Dependency: If p0100 is changed, all of the rated motor parameters are reset. Only then are possible unit changeovers made.

The units of all motor parameters are changed that are involved in the selection of IEC or NEMA (e.g. r0206, p0307, p0316, r0333, r0334, p0341, p0344, r1493, r1969).

See also: r0206, p0210, p0300, p0304, p0305, p0307, p0308, p0309, p0310, p0311, p0314, p0320, p0322, p0323, p0335, r0336, r0337, p1800

Note: The parameter can only be changed for vector control (p0107).

The parameter value is not reset when the factory setting is restored (p0010 = 30, p0970).

p0101[0...n] Drive object numbers / DO numbers

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(1)	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Topology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	62	0

Description: The parameter contains the object number via which every drive object can be addressed.
The number of an existing drive object is entered into each index.
Value = 0: No drive object is defined.

Note: The numbers are automatically allocated.
For the commissioning tool, this object number cannot be entered using the expert list, but is automatically assigned when inserting an object.

r0102[0...1] Number of drive objects / DO count

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Topology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the number of existing or existing and prepared drive objects.

Index: [0] = Existing drive objects
[1] = Existing and prepared drive objects

Dependency: See also: p0101

Note: The numbers of the drive objects are in p0101.
For index [0]:
Displays the number of drive objects that have already been set up.
For index [1]:
Displays the number of drive objects that have already been set up and, in addition, the drive objects that still have to be set up.

p0103[0...n] Application-specific view / Appl_spec view

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(2)	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	999	0

Description: The application-specific view of an existing drive object is entered into each index.
The parameter cannot be changed.

Dependency: See also: p0107

Note: In the non-volatile memory, the application-specific views are defined in files with the following structure:
PDxxxyyy.ACX
xxx: Application-specific view (p0103)
yyy: Type of drive object (p0107)
Example:
PD052011.ACX
--> "011" stands for the drive object, type SERVO
--> "052" is the number of the view for this drive object

r0103 Application-specific view / Appl_spec view

VECTOR_G, B_INF

Can be changed: -
Data type: Unsigned16
P group: Closed-loop control
Not for motor type: -
Min: 0
Calculated: -
Dyn. index: -
Unit group: -
Scaling: -
Max: 65535
Access level: 2
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting: -

Description: Displays the application-specific view of the individual drive object.
Dependency: See also: r0107

p0105 Activate/deactivate drive object / DO act/deact

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T
Data type: Integer16
P group: Closed-loop control
Not for motor type: -
Min: 0
Calculated: -
Dyn. index: -
Unit group: -
Scaling: -
Max: 1
Access level: 2
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting: 1

Description: Setting to activate/deactivate a drive object.
Value:
0: Deactivate drive object
1: Activate drive object
Dependency: See also: r0106
Notice: The following applies when activating:
If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.

p0105 Activate/deactivate drive object / DO act/deact

VECTOR_G, B_INF, TM120, TM150, TB30, ENC, HUB

Can be changed: T
Data type: Integer16
P group: Closed-loop control
Not for motor type: -
Min: 0
Calculated: -
Dyn. index: -
Unit group: -
Scaling: -
Max: 2
Access level: 2
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting: 1

Description: Setting to activate/deactivate a drive object.
Value:
0: Deactivate drive object
1: Activate drive object
2: Drive object deactivate and not present
Dependency: When activating drive objects with the safety functions enabled, the following applies:
After reactivating, a warm restart (p0009 = 30, p0976 = 2, 3) or POWER ON should be carried out.
See also: r0106
See also: A01314
Notice: The following applies when activating:
If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.

Note: For value = 0, 2:

When a drive object is deactivated it no longer outputs any errors.

If value = 0:

All components of the drive object were completely commissioned and are deactivated using this value. They can be removed from the DRIVE-CLiQ without any error.

If a component has been deactivated, only the component with the correct serial number may be inserted, or none at all.

If value = 1:

All components of the drive object must be available for error-free operation.

If value = 2:

Components of a drive object in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the components are marked to be bypassed in the DRIVE-CLiQ line.

For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

p0105 Activate/deactivate drive object / DO act/deact

TM31

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	2	1

Description: Setting to activate/deactivate a drive object.

Value:
0: Deactivate drive object
1: Activate drive object
2: Drive object deactivate and not present

Dependency: See also: r0106

See also: A01314

Warning: A drive that is moved by simulating the inputs of a Terminal Module is brought to a standstill while this parameter is being changed over.

Notice: The following applies when activating:

If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.

Note: For value = 0, 2:

When a drive object is deactivated it no longer outputs any errors.

If value = 0:

All components of the drive object were completely commissioned and are deactivated using this value. They can be removed from the DRIVE-CLiQ without any error.

If a component has been deactivated, only the component with the correct serial number may be inserted, or none at all.

If value = 1:

All components of the drive object must be available for error-free operation.

If value = 2:

Components of a drive object in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the components are marked to be bypassed in the DRIVE-CLiQ line.

For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

p0105 Activate/deactivate drive object / DO act/deact

TM54F_MA, TM54F_SL

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	2	1

Description: Setting to activate/deactivate a drive object.

Value:
0: Deactivate drive object
1: Activate drive object
2: Drive object deactivate and not present

Dependency: TM54F can only be deactivated if all of the drives assigned to it via p10010 have been deactivated or safety on the assigned drives has not be enabled.

When activating drive objects with the safety functions enabled, the following applies:

After reactivating, a warm restart (p0009 = 30, p0976 = 2, 3) or POWER ON should be carried out.

See also: r0106

See also: A01314

Notice: The following applies when activating:

If components are inserted for the first time and the appropriate drive object is activated, then the drive system is automatically booted. To do this, the pulses of all of the drive objects must be suppressed.

Note: For value = 0, 2:

When a drive object is deactivated it no longer outputs any errors.

If value = 0:

All components of the drive object were completely commissioned and are deactivated using this value. They can be removed from the DRIVE-CLiQ without any error.

If a component has been deactivated, only the component with the correct serial number may be inserted, or none at all.

If value = 1:

All components of the drive object must be available for error-free operation.

If value = 2:

Components of a drive object in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the components are marked to be bypassed in the DRIVE-CLiQ line.

For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

r0106 Drive object active/inactive / DO act/inact

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, VECTOR_G, B_INF, TM31, TM120, TM150, TB30, ENC, HUB

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	-

Description: Displays the "active/inactive" state of a drive object.

Value:
0: Drive object inactive
1: Drive object active

Dependency: See also: p0105

p0107[0...n] Drive object type / DO type

CU_G130_PN, CU_G130_DP

Can be changed: C1(2)	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	300	0

Description: The type of an existing drive object is entered into each index.

Value:
0: -
2: SINAMICS G
12: VECTOR
100: TB30 (Terminal Board)
150: DRIVE-CLiQ Hub Module
200: TM31 (Terminal Module)
205: TM54F - Master (Terminal Module)
206: TM54F - Slave (Terminal Module)
207: TM120 (Terminal Module)
208: TM150 (Terminal Module)
300: ENCODER

Dependency: See also: p0103

Caution: If you change this parameter and exit the device commissioning mode, then the complete software will be set up again and all of the previous drive parameter settings are deleted.

Note: The number (p0101) and the associated drive object type are in the same index.
For SINAMICS S a drive object type can only be changed between SERVO and VECTOR. If you change the parameter and exit drive commissioning (p0009 from 2 to 0) the drive parameters are set up again.

p0107[0...n] Drive object type / DO type

CU_G150_PN, CU_G150_DP

Can be changed: C1(2)	**Calculated:** -	**Access level:** 2

Description: Pre-assignment of the sampling times in p0115.

The clock cycles for the current controller / speed controller / flux controller / setpoint channel / position controller / positioning / technology controller are pre-assigned as follows:

SINAMICS S, servo drive:

p0112 = 1: 250 / 250 / 250 / 4000 / 2000 / 8000 / 4000 µs (for chassis units)

p0112 = 2: 125 / 250 / 250 / 4000 / 2000 / 8000 / 4000 µs

p0112 = 3: 125 / 125 / 125 / 4000 / 1000 / 4000 / 4000 µs

p0112 = 4: 62.5 / 62.5 / 62.5 / 1000 / 1000 / 2000 / 1000 µs (for S210)

p0112 = 5: 31.25 / 31.25 / 31.25 / 1000 / 1000 / 2000 / 1000 µs

SINAMICS S, Active Infeed (p0112 = 1 not for p0092 = 1):

p0112 = 1: 400 / - / - / 1600 µs (pre-setting for the rated pulse frequency = 2.5 kHz)

p0112 = 2: 250 / - / - / 2000 µs (pre-setting for rated pulse frequency = 4.0 kHz, 8.0 kHz)

p0112 = 3: 125 / - / - / 2000 µs

p0112 = 4: 125 / - / - / 1000 µs

p0112 = 5: 125 / - / - / 500 µs

SINAMICS S, Smart Infeed (p0112 = 1 not for p0092 = 1):

p0112 = 1: 400 / - / - / 1600 µs (pre-setting for the rated pulse frequency = 2.5 kHz)

p0112 = 2: 250 / - / - / 2000 µs (pre-setting for rated pulse frequency = 4.0 kHz, 8.0 kHz)

p0112 = 3: 250 / - / - / 2000 µs

p0112 = 4: 250 / - / - / 1000 µs

p0112 = 5: Not possible

SINAMICS S, Basic Infeed, booksize:

p0112 = 4: 250 / - / - / 2000 µs

SINAMICS S, Basic Infeed, chassis:

p0112 = 1: 2000 / - / - / 2000 µs

p0112 = 2: 2000 / - / - / 2000 µs (pre-setting)

p0112 = 3: 2000 / - / - / 2000 µs

p0112 = 4: Not possible

p0112 = 5: Not possible

SINAMICS S/G, vector drive (p0112 = 1 not for p0092 = 1 and not for PM340):

p0112 = 1: 400 / 1600 / 1600 / 1600 / 3200 / 3200 / 3200 µs (for rated pulse frequency = 1.25, 2.5 kHz)

p0112 = 2: 250 / 1000 / 2000 / 1000 / 2000 / 4000 / 4000 µs

p0112 = 3: 250 / 1000 / 1000 / 1000 / 2000 / 4000 / 4000 µs (for rated pulse frequency = 2.0, 4.0 kHz)

SINAMICS S, vector drive:

p0112 = 4: 250 / 500 / 1000 / 500 / 1000 / 2000 / 2000 µs

p0112 = 5: 250 / 250 / 1000 / 500 / 1000 / 2000 / 1000 µs

Value:

0: Expert
1: xLow
2: Low
3: Standard

Recommendation: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Dependency: It is prohibited to select a parameter value from p0112 if the associated current controller clock cycle cannot set (e.g. p0112 = 1 is not possible for a vector drive and PM340 power unit).

If, for a servo drive, p112 = 5 is set, then the pulse frequency p1800 is pre-assigned 8 kHz. For D410-2 and vector drive, the current controller sampling time can only be permanently changed for p0112 = 0.

See also: p0092

Note: For p0112 = 0 (expert) the individual sampling times in p0115 can be adjusted.
The setting p0112 = 1 cannot be set for a vector drive with power unit type PM340 (refer to r0203).

p0112 = 2: 250 / 1000 / 2000 / 1000 / 2000 / 4000 / 4000 µs
p0112 = 3: 250 / 1000 / 1000 / 1000 / 2000 / 4000 / 4000 µs (for rated pulse frequency = 2.0, 4.0 kHz)
SINAMICS S, vector drive:
p0112 = 4: 250 / 500 / 1000 / 500 / 1000 / 2000 / 2000 µs
p0112 = 5: 250 / 250 / 1000 / 500 / 1000 / 2000 / 1000 µs

Value:
0: Expert
1: xLow
2: Low
3: Standard
4: High
5: xHigh

Recommendation: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Dependency: It is prohibited to select a parameter value from p0112 if the associated current controller clock cycle cannot set (e.g. p0112 = 1 is not possible for a vector drive and PM340 power unit).

If, for a servo drive, p112 = 5 is set, then the pulse frequency p1800 is pre-assigned 8 kHz. For D410-2 and vector drive, the current controller sampling time can only be permanently changed for p0112 = 0.

See also: p0092

Note: For p0112 = 0 (expert) the individual sampling times in p0115 can be adjusted.

The setting p0112 = 1 cannot be set for a vector drive with power unit type PM340 (refer to r0203).

p0113 Minimum pulse frequency, selection / f_puls min sel

VECTOR_G	**Can be changed:** C1(3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1.000 [kHz]	2.000 [kHz]	2.000 [kHz]

Description: The current controller sampling time (p0115[0]) is pre-assigned by selecting the minimum pulse frequency.

Dependency: The parameter can only be changed with p0112 = 0 (expert). For isochronous operation (p0092 = 1) the parameter can only be set so that a current controller sampling time of 125 µs is obtained as an integer number.

The required pulse frequency can be set in p1800 after commissioning (p0009 = p0010 = 0), assuming that this has not been restricted by other conditions (e.g. as a result of p1082, p0310).

See also: p0112, r0114, p0115, p1800

Note: The current controller sampling time (p0115[0]) is set to the inverse value of twice the minimum pulse frequency. For p0113 = 1.0 kHz, p0115[0] = 500 µs is set, for p0113 = 2.0 kHz, p0115[0] = 250 µs is set. The current controller sampling time (p0115[0]), calculated from the pulse frequency, is set in a grid of 1.25 µs.

For a power unit type PM340 (refer to r0203), only the values 1.0 and 2.0 kHz can be set. A value of 1.0 kHz can be set in order to achieve a current controller sampling time of 500µs. However, in this case, the minimum pulse frequency p1800 is limited to 2 kHz.

r0114[0...9] Minimum pulse frequency recommended / f_puls min recom

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [kHz]	- [kHz]	- [kHz]

Description: Displays the recommended values (indices 0 and 1) for the minimum pulse frequency (p0113).

If the system rejects a change to p0113 because the value to be used lies outside the permitted value range, then instead the recommended value from r0114 can be used.

Index: [0] = If only the actual drive is changed
[1] = If all drives connected to the DRIVE-CLiQ line are changed
[2] = 2nd possible pulse frequency
[3] = 3rd possible pulse frequency
[4] = 4th possible pulse frequency
[5] = 5th possible pulse frequency
[6] = 6th possible pulse frequency
[7] = 7th possible pulse frequency
[8] = 8th possible pulse frequency
[9] = 9th possible pulse frequency

Dependency: See also: p0113

Note: After exiting commissioning (p0009 = p0010 = 0), the pulse frequencies calculated from the sampling time p0115[0] are displayed in indices 1 to 9. If additional restrictions do not apply (e.g. as a result of the maximum speed (p1082) or due to having selected an output filter), these can be entered into p1800. The maximum pulse frequency of the power units was already taken into account in r0114.

A value of 0 kHz does not define a recommended pulse frequency.

p0115[0] Sampling time for supplementary functions / t_samp suppl_fct

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -

Min:	**Max:**	**Factory setting:**
0.00 [µs]	16000.00 [µs]	4000.00 [µs]

Description: Sets the basic sampling time for supplementary functions (DCC, free function blocks) on this object.
Only setting values that are an integer multiple of 125 µs are permissible.

Index: [0] = Basic sampling time

p0115[0...6] Sampling times for internal control loops / t_samp int ctrl

VECTOR_G

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [µs]	16000.00 [µs]	[0] 250.00 [µs] [1] 1000.00 [µs] [2] 1000.00 [µs] [3] 1000.00 [µs] [4] 2000.00 [µs] [5] 4000.00 [µs] [6] 4000.00 [µs]

Description: Sets the sampling times for the control loops.
The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).

Recommendation: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.
When adjusting the current controller sampling time, it is recommended to use values that are an integer multiple of 6.25 µs. The sampling times of analog or digital inputs/outputs (see p0799, p4099) should be set to an integer multiple of the current controller sampling time.
If the current controller sampling time is to be reduced with respect to the default setting (e.g. < 250 µs), then it is recommended that the motor data identification (standstill measurement) is executed beforehand, in order to avoid a thermal overload of the power unit as a result of high pulse frequencies (p1800).

Index:
[0] = Current controller
[1] = Speed controller
[2] = Flux controller
[3] = Setpoint channel
[4] = Position controller
[5] = Positioning
[6] = Technology controller

Dependency: Depending on the number and type of vector drives, the sampling times are preset differently.
The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms.
Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. p0115[1] = N * p0115[0]; where N is an integer number). The sampling time of the speed controller (p0115[1]) can have as a maximum a value of 800% of the current controller sampling time (p0115[0]).
The sampling times for setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) must have at least 2x the value of the current controller sampling time (p0115[0]).
The sampling time of the current controller p0115[0] and pulse frequency p1800 are checked at each parameter download, and when necessary changed, if, for p0092 = 1, the current controller sampling time is not an integral multiple of 125 µs or if p0112 is set > 1. For p0092 = 0, the check with p0112 = 0 (= expert) can be deactivated.
See also: r0110, r0111, p0112

Note: For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned.

For power unit type PM340 (r0203), only current controller sampling times of 250 µs or 500 µs can be set. The minimum current controller sampling time is otherwise 125 µs (SINAMICS G: 250 µs), the maximum current controller sampling time is 500 µs. For SINAMICS G, the minimum speed controller sampling time is 1 ms.

Current controller sampling times of less than 250 µs are restricted by the number of drives or by the number of power units connected in parallel (also see F01340).

For chassis power units connected in parallel, it is recommended to connect the DRIVE-CLiQ cables (partially) in parallel between the Control Unit and the individual Motor Modules.

For D410-2, the current controller sampling times can only be permanently changed with p0112 = 0 (e.g. to 250 µs).

p0115[0...6] Sampling times for internal control loops / t_samp int ctrl

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [µs]	16000.00 [µs]	[0] 125.00 [µs] [1] 125.00 [µs] [2] 125.00 [µs] [3] 4000.00 [µs] [4] 1000.00 [µs] [5] 4000.00 [µs] [6] 4000.00 [µs]

Description: Sets the sampling times for the control loops.

The default setting is made using p0112 and can only be individually changed for p0112 = 0 (expert).

Recommendation: When changing the sampling times of the current and speed controllers (also refer to p0115), then we recommend that after exiting commissioning (p0009 = 0) the controller settings are re-calculated using p0340 = 4.

Index:
[0] = Current controller
[1] = Speed controller
[2] = Flux controller
[3] = Setpoint channel
[4] = Position controller
[5] = Positioning
[6] = Technology controller

Dependency: The sampling times can only be separately set if p0112 is 0 (expert). If a sampling time is modified in the expert mode, then all of the sampling times with higher indices are automatically changed in the same ratio as the sampling time itself was changed. Slower time slices are only taken if the calculated sampling time is also permitted. Upper limit is 8 ms.

Higher-level controls must be calculated in integral ratios to lower-level controls (e.g. p0115[1] = N * p0115[0]; where N is an integer number). The sampling time of the speed controller (p0115[1]) can have as a maximum a value of 800% of the current controller sampling time (p0115[0]).

For servo drives, the maximum sampling time of the current controller is 250 µs and for vector drives, 500 µs.

The sampling times for setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) must have at least 2x the value of the current controller sampling time (p0115[0]).

See also: r0110, r0111, p0112

Note: For function modules that can be activated (e.g. technology controller), the parameters values are pre-assigned.

For the Active Line Module (ALM) and Smart Line Module (SLM), the current and DC link voltage controllers operate with the same sampling time. For ALM/SLM the maximum current controller sampling time is 400 µs.

For the Basic Line Module (BLM), the DC link voltage measurement operates in the current controller sampling time.

For BLM booksize, only the current controller sampling time of 250 µs is permitted. For BLM chassis, only the current controller sampling time of 2000 µs is permitted.

For power unit type PM340 (r0203), only current controller sampling times of 62.5 µs, 125 µs, 250 µs and 500 µs can be set. The maximum current controller sampling time for servo drives and the minimum current controller sampling time for vector drives is 250 µs.

If sampling times in p0115 are individually changed for p0112 = 0 (expert) then it must always be observed that the selected sampling times of the setpoint channel (p0115[3]), position controller (p0115[4]), positioning (p0115[5]) and technology controller (p0115[6]) are always greater than or equal to twice the current controller sampling time (p0115[0]).

p0115[0] Sampling time for supplementary functions / t_samp suppl_fct

TM120

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -

Min:	**Max:**	**Factory setting:**
0.00 [µs]	16000.00 [µs]	4000.00 [µs]

Description: Sets the sampling times for supplementary functions (DCC, free function blocks) on this object.
Only setting values that are an integer multiple of 125 µs are permissible.

Index: [0] = Basic sampling time

p0115[0] Sampling time for supplementary functions / t_samp suppl_fct

TM31, TM150, TB30

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [µs]	16000.00 [µs]	4000.00 [µs]

Description: Sets the sampling times for supplementary functions (DCC, free function blocks) on this object.
Only setting values that are an integer multiple of 125 µs are permissible.

Index: [0] = Basic sampling time

Note: This parameter only applies to set the sampling times of possible supplementary functions.
The sampling times for inputs/outputs must be set in p4099.

p0115[0] Sampling time for speed detection / t_samp n_det

ENC

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
125.00 [µs]	500.00 [µs]	125.00 [µs]

Description: Sets the sampling times for speed detection.

Index: [0] = Basic sampling time

r0116[0...1] Drive object clock cycle recommended / DO_clock recom

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, VECTOR_G, B_INF, TM31, TB30

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [µs]	- [µs]	- [µs]

Description: Displays the recommended sampling time for the drive objects.
r00116[0] = recommended sampling time:
Recommended value which would then make the complete system operational.
r00116[1] = recommended sampling time:
Recommended value, which after changing other clock cycles on the DRIVE-CLiQ line, would result in an operational system.

Index: [0] = Change only for the actual drive object
[1] = Changing all objects on the DRIVE-CLiQ line

Dependency: See also: p0115

p0117 Current controller computing dead time mode / I_ctrl t_dead mode

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	6	6

Description: Sets the mode for the computing dead time of the current controller.

0: Offset (shifted) clocking, minimum computing dead time of each drive, automatic setting

1: Clocking at the same time, the dead time aligns itself to the dead time of the latest drive, automatic setting

2: Manual setting of the computing dead time, early transfer

3: Manual setting of the computing dead time, late transfer

4-6: As for 0-2, however, no early transfers are set for vectors

Dependency: See also: p0118

See also: A02100

Note: The mode change is not effective until the drive unit is switched on again.

For p0117 = 0:

The times when the setpoints become effective for the individual controls is automatically and individually determined. Another computing dead time is set for each control (closed-loop) (p0118). Current is impressed for the individual controls without any offset with respect to time (improved EMC compatibility).

For p0117 = 1:

The latest closed-loop control determines when the setpoints for each of the individual controls become active. The same computing dead time is set for each control (p0118). Current is impressed (flows) for the individual controls without any offset with respect to time.

For p0117 = 2:

The computing dead time is manually set. The user must optimize the value in p0118.

For p0117 = 3:

The computing dead time is manually set. The user must optimize the value in p0118.

For p0117 = 4 ... 6:

Behavior as for p0117 = 0 ... 2, however for vectors, the earliest times are not determined.

p0118 Current controller computing dead time / I_ctrl t_dead

VECTOR_G, B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [µs]	2000.00 [µs]	0.00 [µs]

Description: This parameter is pre-set as a function of the current controller sampling time (p0115[0]) and normally does not have to be changed.

Dependency: See also: p0117

See also: A02100

Note: For p0118 <= 0.005 µs, the current controller output is delayed by a complete current controller sampling time (p0115[0]).

After p0118 has been changed, we recommend that the current controller is adapted (p1715).

p0120 Number of Power unit Data Sets (PDS) / PDS count

VECTOR_G, B_INF	**Can be changed:** C1(3), C2(15)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1	8	1

Description: Sets the number of Power unit Data Sets (PDS).
The value corresponds to the number of power units connected together for a parallel circuit configuration.

Dependency: See also: r0107

Note: This parameter is only significant for drive objects A_INF and VECTOR with a parallel circuit configuration.

p0121[0...n] Power unit component number / PU comp_no

VECTOR_G, B_INF	**Can be changed:** C1(4), C2(15)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** PDS, p0120	**Function diagram:** -
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	199	0

Description: The power unit data set is assigned to a power unit using this parameter.
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to a power unit.

Dependency: See also: r0107

Note: For parallel circuit configurations, the parameter index is assigned to a power unit.

p0124[0...n] Main component detection using LED / M_comp detect LED

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
	P group: Converter	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Detection of the main components of the drive object selected via the index.

p0124[0...n] Power unit detection via LED / PU detection LED

VECTOR_G, B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** PDS, p0120	**Function diagram:** -
	P group: Converter	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Detects the power unit assigned to this drive and data set.

Note: While p0124 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate power unit.
For parallel circuit configurations, the parameter index is assigned to a power unit.

p0125[0...n] Activate/deactivate power unit components / PU_comp act/deact

VECTOR_G, B_INF	**Can be changed:** C1(4), T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** PDS, p0120	**Function diagram:** -
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	2	1

Description: Setting to activate/deactivate a power unit component.

Value:
0: Deactivate component
1: Activate component
2: Component deactivate and not present

Recommendation: After inserting a component, before activating, first wait for Alarm A01317.

Dependency: See also: r0126

See also: A01314, A01317

Caution: For a parallel connection, the following applies:

When deactivating individual power units using this parameter, it is not permissible that the power units of the parallel connection involved are connected. Infeed units should be disconnected from the line supply (for example, using a contactor). Motor feeder cables should be disconnected. In addition, defective power units should be disconnected from the DC link.

Notice: It is not permissible to deactivate drive objects with safety functions enabled.

Note: The activation of a component can be rejected if the component was inserted for the first time. In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited.

For units connected in parallel, when one of the power units is deactivated, then the enable in p7001 is withdrawn.

For value = 0, 2:

When a component is deactivated it no longer outputs any errors.

If value = 0:

The component was completely commissioned and is deactivated using this value. It can be removed from the DRIVE-CLiQ without any error.

If value = 1:

The component must be available for error-free operation.

If value = 2:

A component in a project generated offline and set to this value must never be inserted in the actual topology from the very start. This means that the component is marked to be bypassed in the DRIVE-CLiQ line.

For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

r0126[0...n] Power unit components active/inactive / PU comp act/inact

VECTOR_G, B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** PDS, p0120	**Function diagram:** -
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	-

Description: Displays the "active/inactive" state of a power unit component.

Value:
0: Component inactive
1: Component active

Dependency: See also: p0105, p0125, p0897

r0127[0...n] Power unit EEPROM data version / PU EEPROM version

VECTOR_G, B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** PDS, p0120	**Function diagram:** -
	P group: Converter	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the version of the EEPROM data of the power unit.
Dependency: See also: r0147, r0157
Note: For parallel circuit configurations, the parameter index is assigned to a power unit.

r0128[0...n] Power unit firmware version / PU FW version

VECTOR_G, B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** PDS, p0120	**Function diagram:** -
	P group: Converter	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the firmware version of the power unit.
Dependency: See also: r0018, r0148, r0158, r0197, r0198
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.
For parallel circuit configurations, the parameter index is assigned to a power unit.

p0130 Number of Motor Data Sets (MDS) / MDS count

VECTOR_G	**Can be changed:** C1(3), C2(15)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8575
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1	16	1

Description: Sets the number of Motor Data Sets (MDS).

p0131[0...n] Motor component number / Mot comp_no

VECTOR_G	**Can be changed:** C1(4), C2(15)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	199	0

Description: The motor data set is assigned to a motor using this parameter.
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to a motor.

p0133[0...n] Motor configuration / Motor config

VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0000 bin

Description: Configuration of the motor when commissioning the motor.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Motor connection type	Delta	Star	-

Dependency: For standard induction motors (p0301 > 10000), bit 0 is automatically pre-assigned the connection type of the selected data set.

For p0100 > 0 (60 Hz rated motor frequency), it is not possible to select bit 1.

See also: p0304, p0305

Note: For bit 00:

When changing the bits, the rated motor voltage p0304 and the rated motor current p0305 are automatically converted to the selected connection type (star/delta).

For instance, this can be necessary if an 1LE1 motor is selected using the Article number (MLFB) or code number (p0300 = 100, p0301 = 1x0xx), and the motor connection type does not correspond to that of the data set.

p0139[0...2] Copy Motor Data Set MDS / Copy MDS

VECTOR_G	**Can be changed:** C2(15)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8575
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	31	0

Description: Copying a Motor Data Set (MDS) into another.

Index: [0] = Source motor data set
[1] = Target motor data set
[2] = Start copying procedure

Note: Procedure:

1. In Index 0, enter which motor data set should be copied.
2. In Index 1, enter the motor data set data that is to be copied into.
3. Start copying: set index 2 from 0 to 1.

p0139[2] is automatically set to 0 when copying is completed.

When copying, p0131 is not taken into account.

p0140 Number of Encoder Data Sets (EDS) / EDS count

VECTOR_G	**Can be changed:** C1(3), C2(15)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8570
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1	16	1

Description: Sets the number of Encoder Data Sets (EDS).

Note: When parameterizing the drive with "no encoder" there must be at least one encoder data set (p0140 >= 1).

p0140 Number of Encoder Data Sets (EDS) / EDS count

ENC	**Can be changed:** C1(3), C2(15)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8570
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1	1	1

Description: Sets the number of Encoder Data Sets (EDS).

Note: When parameterizing the drive with "no encoder" there must be at least one encoder data set (p0140 >= 1).

p0141[0...n] Encoder interface (Sensor Module) component number / Enc_intf comp_no

VECTOR_G, ENC	**Can be changed:** C1(4), C2(15)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** EDS, p0140	**Function diagram:** 4704, 8570
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	199	0

Description: This parameter is used to assign the encoder data set to an encoder evaluation (e.g. SMC).
This unique component number is assigned when parameterizing the topology.
Only a component number can be entered that corresponds to an encoder evaluation.

Note: If the encoder evaluation and encoder are integrated (motor with DRIVE-CLiQ), then their component numbers are identical.
For an SMC, different component numbers are assigned for the SMC (p0141) and the (actual) encoder (p0142).
SMC: Sensor Module Cabinet

p0142[0...n] Encoder component number / Encoder comp_no

VECTOR_G, ENC	**Can be changed:** C1(4), C2(15)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** EDS, p0140	**Function diagram:** 4704
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	199	0

Description: This parameter is used to assign the encoder data set to an encoder.
This assignment is made using the unique component number that was assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to an encoder.

Note: If the encoder evaluation and encoder are integrated (motor with DRIVE-CLiQ), then their component numbers are identical.
For an SMC, different component numbers are assigned for the SMC (p0141) and the (actual) encoder (p0142).

p0144[0...n] Sensor Module detection via LED / SM detection LED

VECTOR_G, ENC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Detects the Sensor Module assigned to this drive and data set.

Note: While p0144 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate Sensor Module.

p0145[0...n] Activate/deactivate encoder interface / Enc_intf act/deact

VECTOR_G, ENC	**Can be changed:** C1(4), U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	2	1

Description: Setting to activate/deactivate an encoder interface (Sensor Module).

Value:
0: Deactivate component
1: Activate component
2: Component deactivate and not present

Recommendation: After inserting a component, before activating, first wait for Alarm A01317.

Dependency: See also: r0146

See also: A01314, A01317

Note: The deactivation of an encoder interface corresponds to the"parking encoder" function and has the same effect.

The activation of a component can be rejected if the component was inserted for the first time.

In this case, it is only possible to activate the component when the pulses for all of the drive objects are inhibited.

With the encoder interface for encoder 1 (motor encoder), the relevant drive object for writing the parameter must be in the "Ready for operation" state.

With the encoder interface for encoders 2 and 3, the parameter can also be written during operation.

For value = 0, 2:

When a component is deactivated it no longer outputs any errors.

If value = 0:

The component was completely commissioned and is deactivated using this value. It can be removed from the DRIVE-CLiQ without any error.

If value = 1:

The component must be available for error-free operation.

If value = 2:

A component in a project generated offline and set to this value must never be inserted in the actual topology from the very start.

For components that comprise several individual components (e.g. Double Motor Modules), it is not permissible to set just one subset to this value.

r0146[0...n] Encoder interface active/inactive / Enc_intf act/deact

VECTOR_G, ENC	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	-

Description: Displays the "active" or "inactive" state of an encoder interface (Sensor Module).

Value:
0: Component inactive
1: Component active

Dependency: See also: p0105, p0145, p0480, p0897

r0147[0...n] Sensor Module EEPROM data version / SM EEPROM version

VECTOR_G, ENC	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the version of the EEPROM data of the Sensor Module.

Dependency: See also: r0127, r0157

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0148[0...n] Sensor Module firmware version / SM FW version

VECTOR_G, ENC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the firmware version of the Sensor Module.
Dependency: See also: r0018, r0128, r0158, r0197, r0198
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

p0150 Number of VSM data sets / VSM dat_sets qty

VECTOR_G

Can be changed: C1(3), C2(15)	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: Data sets	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	2	1

Description: Sets the number of VSM data sets.

p0151[0...n] Voltage Sensing Module component number / VSM comp_no

VECTOR_G

Can be changed: C1(4), C2(15)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** p0150	**Function diagram:** -
P group: Data sets	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	199	0

Description: The VSM data set is assigned to a VSM evaluation using this parameter.
Note: If two VSM are connected at the Motor Module, then the first (p0151[0]) is assigned to the line voltage measurement (see p3801) and the second, to the motor voltage measurement (see p1200).

p0151 Terminal Module component number / TM comp_no

TM31, TM120, TM150, TM54F_MA, TM54F_SL

Can be changed: C1(4), C2(15)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: Data sets	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	199	0

Description: Sets the component number for the Terminal Module.
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to a Terminal Module.

p0151[0...1] DRIVE-CLiQ Hub Module component number / Hub comp_no

HUB

Can be changed: C1(4), C2(15) | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dyn. index:** - | **Function diagram:** -
P group: Data sets | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	199	0

Description: This parameter is used to assign the data set to a DRIVE-CLiQ Hub Module.
This unique component number is assigned when parameterizing the topology.
Only the numbers of components operated as hubs can be entered in these parameters.
[0] = DRIVE-CLiQ node 1
[1] = DRIVE-CLiQ node 2

p0154 Terminal Module detection via LED / TM detection LED

TM31, TM120, TM150, TM54F_MA, TM54F_SL

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dyn. index:** - | **Function diagram:** -
P group: Terminals | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	1	0

Description: Detects the Terminal Module assigned to this drive and data set.
Note: While p0154 = 1, the READY LED flashes green/orange or red/orange with 2 Hz at the appropriate Terminal Module.

p0154 DRIVE-CLiQ Hub Module detection via LED / Hub detection LED

HUB

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dyn. index:** - | **Function diagram:** -
P group: Encoder | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	1	0

Description: Detects any DRIVE-CLiQ Hub Module that has been assigned.

p0155[0...n] Voltage Sensing Module activate/deactivate / VSM act/deact

VECTOR_G

Can be changed: C1(4), T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dyn. index:** p0150 | **Function diagram:** -
P group: Data sets | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	2	1

Description: Setting to activate/deactivate a Voltage Sensing Module (VSM).
Value:
0: Deactivate component
1: Activate component
2: Component deactivate and not present
Recommendation: After inserting a component, before activating, first wait for Alarm A01317.
Dependency: See also: r0156
See also: A01314, A01317

r0156[0...n] Voltage Sensing Module active/inactive / VSM act/inact

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** p0150	**Function diagram:** -
P group: Data sets	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	-

Description: Displays the "active" or "inactive" state of a Voltage Sensing Module (VSM).

Value:
0: Component inactive
1: Component active

Dependency: See also: p0155

r0157[0...n] Voltage Sensing Module EEPROM data version / VSM EEPROM version

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** p0150	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the version of the EEPROM data of the Voltage Sensing Module (VSM).

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0157 Terminal Module EEPROM data version / TM EEPROM version

TM31, TM120, TM150, TM54F_MA, TM54F_SL

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the version of the EEPROM data of the Terminal Module.

Dependency: See also: r0127, r0147

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0157 DRIVE-CLiQ Hub Module EEPROM data version / Hub EEPROM version

HUB

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the version of the EEPROM data for the DRIVE-CLiQ Hub Module.

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0158[0...n] Voltage Sensing Module firmware version / VSM FW version

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** p0150	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the firmware version of the Voltage Sensing Module (VSM).
Dependency: See also: r0018, r0128, r0197, r0198
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0158 Terminal Module firmware version / TM FW version

TM31, TM120, TM150, TM54F_MA, TM54F_SL

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the firmware version of the Terminal Module.
Dependency: See also: r0018, r0128, r0148, r0197, r0198
Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

r0158 DRIVE-CLiQ Hub Module firmware version / Hub FW version

HUB

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the firmware version of the DRIVE-CLiQ Hub Module.

p0161 Option board component number / Opt board comp_no

TB30

Can be changed: C1(4), C2(15)	**Calculated:** -	**Access level:** 4
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: Data sets	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	199	0

Description: Sets the component number for the option board (e.g. Terminal Board 30).
This unique component number is assigned when parameterizing the topology.
Only component numbers can be entered into this parameter that correspond to an option board.

p0170 Number of Command Data Sets (CDS) / CDS count

VECTOR_G

Can be changed: C1(3) | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dyn. index:** - | **Function diagram:** -
P group: Commands | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
2	4	2

Description: Sets the number of Command Data Sets (CDS).

Note: It is possible to toggle between command parameters (BICO parameters) using this data set changeover.

p0170 Number of Command Data Sets (CDS) / CDS count

B_INF

Can be changed: C1(3) | **Calculated:** - | **Access level:** 2
Data type: Unsigned8 | **Dyn. index:** - | **Function diagram:** -
P group: Commands | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
1	2	1

Description: Sets the number of Command Data Sets (CDS).

Note: It is possible to toggle between command parameters (BICO parameters) using this data set changeover.

p0171[0...n] Drive objects function module 1 / DO fct_mod 1

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(2) | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** -
P group: - | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: The function module of an existing drive object is entered into each index (see p0101, p0107).
The following bits are available in p0171 for the Control Unit (Index 0):
Bit 00: PZD extension
For all other drive objects (Index > 0), the significance of the bits should be taken from the display parameters r0171 of the drive object.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Bit 0	ON	OFF	-
01	Bit 1	ON	OFF	-
02	Bit 2	ON	OFF	-
03	Bit 3	ON	OFF	-
04	Bit 4	ON	OFF	-
05	Bit 5	ON	OFF	-
06	Bit 6	ON	OFF	-
07	Bit 7	ON	OFF	-
08	Bit 8	ON	OFF	-
09	Bit 9	ON	OFF	-
10	Bit 10	ON	OFF	-
11	Bit 11	ON	OFF	-
12	Bit 12	ON	OFF	-
13	Bit 13	ON	OFF	-
14	Bit 14	ON	OFF	-
15	Bit 15	ON	OFF	-
16	Bit 16	ON	OFF	-
17	Bit 17	ON	OFF	-
18	Bit 18	ON	OFF	-
19	Bit 19	ON	OFF	-
20	Bit 20	ON	OFF	-
21	Bit 21	ON	OFF	-

22	Bit 22	ON	OFF	-
23	Bit 23	ON	OFF	-
24	Bit 24	ON	OFF	-
25	Bit 25	ON	OFF	-
26	Bit 26	ON	OFF	-
27	Bit 27	ON	OFF	-
28	Bit 28	ON	OFF	-
29	Bit 29	ON	OFF	-
30	Bit 30	ON	OFF	-
31	Bit 31	ON	OFF	-

Dependency: Active messages can prevent or influence activating a function module.
See also: p0108, p0172, p0173
See also: A07089, F13010

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

r0171 Drive objects function module 1 / DO fct_mod 1

VECTOR_G, B_INF, TM31, TM120, TM150, TB30, ENC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the activated function module for the particular drive object.

Dependency: See also: r0108, r0172, r0173

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

p0172[0...n] Drive objects function module 2 / DO fct_mod 2

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(2)	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: The function module of an existing drive object is entered into each index (see p0101, p0107).
The following bits are available in p0172 for the Control Unit (Index 0):
- still none
For all other drive objects (Index > 0), the significance of the bits should be taken from the display parameters r0172 of the drive object.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Bit 0	ON	OFF	-
01	Bit 1	ON	OFF	-
02	Bit 2	ON	OFF	-
03	Bit 3	ON	OFF	-
04	Bit 4	ON	OFF	-
05	Bit 5	ON	OFF	-
06	Bit 6	ON	OFF	-
07	Bit 7	ON	OFF	-
08	Bit 8	ON	OFF	-
09	Bit 9	ON	OFF	-
10	Bit 10	ON	OFF	-
11	Bit 11	ON	OFF	-
12	Bit 12	ON	OFF	-
13	Bit 13	ON	OFF	-
14	Bit 14	ON	OFF	-
15	Bit 15	ON	OFF	-
16	Bit 16	ON	OFF	-
17	Bit 17	ON	OFF	-
18	Bit 18	ON	OFF	-

19	Bit 19	ON	OFF	-
20	Bit 20	ON	OFF	-
21	Bit 21	ON	OFF	-
22	Bit 22	ON	OFF	-
23	Bit 23	ON	OFF	-
24	Bit 24	ON	OFF	-
25	Bit 25	ON	OFF	-
26	Bit 26	ON	OFF	-
27	Bit 27	ON	OFF	-
28	Bit 28	ON	OFF	-
29	Bit 29	ON	OFF	-
30	Bit 30	ON	OFF	-
31	Bit 31	ON	OFF	-

Dependency: Active messages can prevent or influence activating a function module.
See also: p0108, p0171, p0173
See also: A07089, F13010

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

r0172 Drive objects function module 2 / DO fct_mod 2

VECTOR_G, B_INF, TM31, TM120, TM150, TB30, ENC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the activated function module for the particular drive object.

Dependency: See also: r0108, r0171, r0173

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

p0173[0...n] Drive objects function module 3 / DO fct_mod 3

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(2)	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: The function module of an existing drive object is entered into each index (see p0101, p0107).
The following bits are available in p0173 for the Control Unit (Index 0):
- still none
For all other drive objects (Index > 0), the significance of the bits should be taken from the display parameters r0173 of the drive object.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Bit 0	ON	OFF	-
01	Bit 1	ON	OFF	-
02	Bit 2	ON	OFF	-
03	Bit 3	ON	OFF	-
04	Bit 4	ON	OFF	-
05	Bit 5	ON	OFF	-
06	Bit 6	ON	OFF	-
07	Bit 7	ON	OFF	-
08	Bit 8	ON	OFF	-
09	Bit 9	ON	OFF	-
10	Bit 10	ON	OFF	-
11	Bit 11	ON	OFF	-
12	Bit 12	ON	OFF	-
13	Bit 13	ON	OFF	-
14	Bit 14	ON	OFF	-
15	Bit 15	ON	OFF	-

16	Bit 16	ON	OFF	-
17	Bit 17	ON	OFF	-
18	Bit 18	ON	OFF	-
19	Bit 19	ON	OFF	-
20	Bit 20	ON	OFF	-
21	Bit 21	ON	OFF	-
22	Bit 22	ON	OFF	-
23	Bit 23	ON	OFF	-
24	Bit 24	ON	OFF	-
25	Bit 25	ON	OFF	-
26	Bit 26	ON	OFF	-
27	Bit 27	ON	OFF	-
28	Bit 28	ON	OFF	-
29	Bit 29	ON	OFF	-
30	Bit 30	ON	OFF	-
31	Bit 31	ON	OFF	-

Dependency: Active messages can prevent or influence activating a function module.
See also: p0108, p0171, p0172
See also: A07089, F13010

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

r0173 Drive objects function module 3 / DO fct_mod 3

VECTOR_G, B_INF, TM31, TM120, TM150, TB30, ENC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the activated function module for the particular drive object.

Dependency: See also: r0108, r0171, r0172

Note: A "function module" is a functional expansion of a drive object that can be activated when commissioning.

p0180 Number of Drive Data Sets (DDS) / DDS count

VECTOR_G

Can be changed: C1(3), C2(15)	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8565
P group: Data sets	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	32	1

Description: Sets the number of Drive Data Sets (DDS).

p0186[0...n] Motor Data Sets (MDS) number / MDS number

VECTOR_G

Can be changed: C1(4), C2(15)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Function diagram:** 8575
P group: Data sets	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	15	0

Description: Using the parameter, each Drive Data Set (= index) is assigned the associated Motor Data Set (MDS).
The parameter value therefore corresponds to the number of the assigned motor data set.

p0187[0...n] Encoder 1 encoder data set number / Enc 1 EDS number

VECTOR_G	**Can be changed:** C1(4), C2(15)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Function diagram:** 4700, 8570
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	99	99

Description: Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 1.
The value corresponds to the number of the assigned encoder data set.
Example:
Encoder 1 in drive data set 2 should be assigned encoder data set 0.
--> p0187[2] = 0

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

p0188[0...n] Encoder 2 encoder data set number / Enc 2 EDS number

VECTOR_G	**Can be changed:** C1(4), C2(15)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Function diagram:** 4700, 8570
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	99	99

Description: Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 2.
The value corresponds to the number of the assigned encoder data set.
Example:
Encoder 2 in drive data set 2 should be assigned to encoder data set 1.
--> p0188[2] = 1

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

p0189[0...n] Encoder 3 encoder data set number / Enc 3 EDS number

VECTOR_G	**Can be changed:** C1(4), C2(15)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Function diagram:** 4700, 8570
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	99	99

Description: Assign a drive data set (= index) the corresponding encoder data set (EDS) for encoder 3.
The value corresponds to the number of the assigned encoder data set.

Note: A value of 99 means that no encoder has been assigned to this drive data set (not configured).

r0192 Power unit firmware properties 1 / PU FW properties 1

VECTOR_G, B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
	P group: Converter	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the properties supported by the power unit firmware.

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	Edge modulation possible	Yes	No	-
	01	Free telegram can be selected	Yes	No	-
	02	Smart Mode possible for Active Line Module	Yes	No	-
	03	Safety Integrated possible for VECTOR	Yes	No	-
	05	Thermal model expanded	Yes	No	-
	06	Liquid cooling	Yes	No	-
	07	SERVO pulse frequency changeover DDS-dependent	Yes	No	-
	08	Simulation mode possible	Yes	No	-

Dependency: See also: r0193

Notice: This information represents the characteristics/features of the power unit firmware. It does not provide information/data about the characteristics/features of the hardware (e.g. bit 06 = 1 means that although the firmware supports "liquid cooling", a power unit with liquid cooling does not have to be used).

Note: For bit 09:

The Motor Module supports the internal armature short-circuit. The function is internally required for voltage protection (p1231 = 3).

For bit 10:

The Motor Module supports the autonomous internal voltage protection.

If the "internal voltage protection" function is activated (p1231 = 3) the Motor Module decides autonomously - using the DC link voltage - as to whether the short-circuit is activated.

For bit 23:

The component supports the detection of current actual values (and the detection of valve close durations) with double clocking and phase shift.

r0193 Power unit firmware properties 2 / PU FW properties 2

VECTOR_G, B_INF

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dyn. index:** - **Function diagram:** -

Factory setting: -

Description: Displays the BIOS and EEPROM data version.
r0198[0]: BIOS version
r0198[1]: EEPROM data version EEPROM 0
r0198[2]: EEPROM data version EEPROM 1

Dependency: See also: r0018, r0128, r0148, r0158, r0197

Note: Example:
The value 1010100 should be interpreted as V01.01.01.00.

p0199[0...24] Drive object name / DO name

All objects

Can be changed: C1
Data type: Unsigned16
P group: -
Not for motor type: -
Min: 0
Calculated: -
Dyn. index: -
Unit group: -
Scaling: -
Max: 65535
Access level: 2
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting: 0

Description: Freely assignable name for a drive object.
For the commissioning tool, this name cannot be entered using the expert list, but is specified in the configuration wizards. The object name can be subsequently modified in the Project Navigator using standard Windows resources.

Note: The parameter is not influenced by setting the factory setting.

r0200[0...n] Power unit code number actual / PU code no act

VECTOR_G, B_INF

Can be changed: -
Data type: Unsigned16
P group: Converter
Not for motor type: -
Min: -
Calculated: -
Dyn. index: PDS, p0120
Unit group: -
Scaling: -
Max: -
Access level: 3
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting: -

Description: Displays the unique code number of the power unit.

Note: r0200 = p0201: No power unit found
For parallel circuit configurations, the parameter index is assigned to a power unit.

p0201[0...n] Power unit code number / PU code no

VECTOR_G

Can be changed: C2(2)
Data type: Unsigned16
P group: Converter
Not for motor type: -
Min: 0
Calculated: -
Dyn. index: PDS, p0120
Unit group: -
Scaling: -
Max: 65535
Access level: 3
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting: 0

Description: Sets the actual code number from r0200 to acknowledge the power unit being used.
When commissioned for the first time, the code number is automatically transferred from r0200 into p0201.

Dependency: See also: F07815

Notice: When p0201 = 10000, the rated power unit data is reloaded and dependent parameters are set (e.g. p0205, p0210, p0230, p0857, p1800). p0201 is then automatically assigned the value of r0200 if the code number of the power unit could be read. A warm start must be performed after this procedure (automatically if necessary).

Note: The parameter is used to identify when the drive is being commissioned for the first time.
The power unit commissioning can only be exited (p0201 = r0200), if the actual and acknowledged code numbers are identical (p0010 = 2). However, if the comparator in p9906 or p9908 is at 2 (low) or 3 (minimum), the power unit commissioning is automatically set to p0201 = r0200 upon exiting.
When the code number is changed, the connection voltage (p0210) is checked and, if necessary, adjusted.
For parallel circuit configurations, the parameter index is assigned to a power unit.

p0201[0...n] Power unit code number / PU code no

B_INF

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3

p0205 Power unit application / PU application

VECTOR_G

Can be changed: C2(1, 2) **Calculated:** - **Access level:** 2

Data type: Integer16 **Dyn. index:** - **Function diagram:** -

P group: Converter **Unit group:** - **Unit selection:** -

Not for motor type: - **Scaling:** - **Expert list:** 1

Min:	Max:	Factory setting:
0	7	6

Description: Overloading the load duty cycles applies under the prerequisite that before and after the overload, the drive converter is operated with its base load current - in this case, a load duty cycle of 300 s is used as basis.

For booksize drive units, the following applies:

Only the setting p0205 = 0 can be selected. In this particular case, the base load current has a load duty cycle of 150 % for 60 s and 176 % for 30 s.

For chassis units, the following applies:

The base load current for a low overload condition is based on a load duty cycle 110 % for 60 s and 150 % for 10 s.

The base load current for a high overload condition is based on a load duty cycle 150 % for 60 s and 160 % for 10 s.

Value:
0: Load duty cycle with high overload
1: Load duty cycle with low overload
6: S1 continuous duty (for servo drives)
7: S6 load duty cycle (for servo drives)

Note:
Depending on the drive object and the power unit type, the parameter is appropriately preassigned when commissioning the system for the first time.
When the parameter is changed, all of the motor parameters and the control mode are pre-assigned according to the selected application.
The parameter has no influence when calculating the thermal overload.
p0205 can only be changed to the settings that are saved in the power unit EEPROM.
The parameter value is not reset when the factory setting is restored (see p0010 = 30, p0970).

r0206[0...4] Rated power unit power / PU P_rated

VECTOR_G, B_INF

Min:	**Max:**	**Factory setting:**
- [kW]	- [kW]	- [kW]

Description: Displays the rated power unit power for various load duty cycles.

Index:
[0] = Rated value
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 cont duty cyc
[4] = S6 load duty cycle

Dependency:
IECdrives (p0100 = 0): Units kW
NEMA drives (p0100 = 1): Units hp
See also: p0100, p0205

r0207[0...4] Rated power unit current / PU PI_rated

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8021
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the rated power unit power for various load duty cycles.

Index:
[0] = Rated value
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 cont duty cyc
[4] = S6 load duty cycle

Dependency:
See also: p0205

r0207[0...4] Rated power unit current / PU PI_rated

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8021
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the rated power unit power for various load duty cycles.

Index: [0] = Rated value
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 cont duty cyc
[4] = S6 load duty cycle

Dependency: See also: p0205

Note: The following applies for booksize power units:
The display value corresponds to the rated DC link current at 600 V (according to the SINAMICS S120 Manual).
For chassis power units, the following applies:
The display value corresponds to the rated input current at the rated line voltage (according to the SINAMICS S120 Manual).

r0208 Rated power unit line voltage / PU U_rated

VECTOR_G, B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**

Description: Displays the rated line voltage of the power unit.
r0208 = 400: 380 - 480 V +/-10 %
r0208 = 500: 500 - 600 V +/-10 %
r0208 = 690: 660 - 690 V +/-10 %
For the Basic Line Module (BLM) the following applies:
r0208 = 690: 500 - 690 V +/-10 %

r0209[0...4] Power unit maximum current / PU I_max

VECTOR_G, B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8750, 8850, 8950
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the maximum output current of the power unit.

Index: [0] = Catalog
[1] = Load duty cycle with low overload
[2] = Load duty cycle with high overload
[3] = S1 load duty cycle
[4] = S6 load duty cycle

Dependency: See also: p0205

p0210 Drive unit supply voltage / U_connect

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1 [V]	63000 [V]	600 [V]

Description: Sets the drive unit supply voltage.
AC/AC unit: The rms value of the phase-to-phase line voltage should be entered.
DC/AC unit: The rated DC voltage of the connection busbar should be entered.

Dependency: Set p1254, p1294 (automatic detection of the Vdc switch-on levels) = 0.
The switch-in thresholds of the Vdc_max controller (r1242, r1282) are then directly determined using p0210.
The parameter can be reduced to p0210 = 100 V if p0212.0 = 1 has been set.
See also: p0212

Notice: If, in the switched-off state (pulse inhibit), the supply voltage is higher than the entered value, the Vdc controller may be automatically deactivated in some cases to prevent the motor from accelerating the next time the system is switched on. In this case, an appropriate alarm is output (A07401).
For SINAMICS S150 devices, the supply voltage is calculated from the line supply voltage (p0210 of the infeed), and is overwritten each time that the line supply voltage changes.

Note: Setting ranges for p0210 as a function of the rated power unit voltage:
U_rated = 400 V:
- p0210 = 380 ... 480 V (AC/AC), 510 ... 720 V (DC/AC)

U_rated = 500 V:
- p0210 = 500 ... 600 V (AC/AC), 675 ... 900 V (DC/AC)

U_rated = 660 ... 690 V:
- p0210 = 660 ... 690 V (AC/AC), 890 ... 1035 V (DC/AC)

U_rated = 500 ... 690 V:
- p0210 = 500 ... 690 V (AC/AC), 675 ... 1035 V (DC/AC)

The precharging switch-in threshold for the DC link voltage (Vdc) is calculated from p0210:
Vdc_pre = p0210 * 0.82 * 1.35 (AC/AC)
Vdc_pre = p0210 * 0.82 (DC/AC)
The undervoltage thresholds for the DC link voltage (Vdc) are calculated from p0210 as a function of the rated power unit voltage:
U_rated = 400 V:
- U_min = p0210 * 0.78 (AC/AC) > 330 V, p0210 * 0.60 (DC/AC) > 380 V

U_rated = 500 V:
- U_min = p0210 * 0.76 (AC/AC) > 410 V

U_rated = 660 ... 690 V:
- U_min = p0210 * 0.82 (AC/AC) > 565 V, p0210 * 0.63 (DC/AC) > 650 V

U_rated = 500 ... 690 V:
- U_min = p0210 * 0.82 (AC/AC) > 420 V, p0210 * 0.63 (DC/AC) > 480 V

p0210 Drive unit supply voltage / U_connect

B_INF

Can be changed: C2(1, 2)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8760
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
70 [Vrms]	1000 [Vrms]	400 [Vrms]

Description: Sets the drive unit supply voltage (3-ph. AC).
The value corresponds to the rms value of the phase-to-phase rated line voltage.

Dependency: The parameter can be reduced to p0210 = 70 V if p0212.0 is set.

Notice: When connected to 3-ph. 230 V AC (only booksize units) the following must be observed:
- the undervoltage and overvoltage limits change (r0296, r0297).
- when using the internal braking chopper of Basic Line Modules (20 or 40 kW) the threshold when the braking chopper becomes active is reduced to 385 V. When using an external braking chopper, it must be ensured that a suitable activation threshold is used.
- all of the components connected to this DC link must also be adapted to the low line voltage. It is especially important that the rated DC voltage of all of the drives connected to this DC link is set with p0210 (e.g. p0210(SERVO) = 1.35 x p0210(B_INF) = 310 V).
- it is not possible to use a Control Supply Module (CSM) to generate a 24 V supply from the DC link, as the minimum continuous DC link voltage should not be below 430 V.

Note: The supply voltage range depends on the voltage class of the power unit.
400 V chassis units: 380 V <= p0210 <= 480 V
690 V chassis units: 500 V <= p0210 <= 690 V
400 V booksize units can also be connected to 3-ph. 230 V AC:
400 V booksize units: 180 V <= p0210 <= 480 V
A reduced supply voltage up to 70 V is possible if p0212.0 = 1 has been set.

p0211 Rated line frequency / Rated line freq

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
10 [Hz]	100 [Hz]	60 [Hz]

Description: Sets the rated line frequency.
Note: The frequency corresponds to the stator frequency of the exciter when supplied from a three-phase AC power controller for a separately excited synchronous machine with reverse field excitation.

p0212 Power unit configuration / PU config

VECTOR_G

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 bin

Description: Sets the power unit configuration.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Drive unit supply voltage reduced	Yes	No	-
01	External precharging present	Yes	No	-
03	Automatically adapt Vdc_max limit	No	Yes	-
05	Contactor display inputs/outputs status	Yes	No	9814

Dependency: For bit 00:
Reduced supply voltages are only possible for booksize and chassis power units (DC/AC).
Bit 0 = 1 can only be set if r0192.22 = 1.
For bit 01 = 1:
The external precharging setting only affects the DC/AC power units.
For bit 03 = 1:
The automatic adaptation (reduction) of the Vdc max limit is deactivated (only for chassis power units). Bit 3 only has an effect, if bit 0 is simultaneously set.
See also: r0192, p0210

Caution: For bit 00:
Working with reduced input voltages deactivates undervoltage detection.
For bit 03:
If the automatic setting of the Vdc max limit is deactivated, then all of the components connected to the DC link must be suitable for the maximum DC link voltage of the power unit (e.g. 820 V for 400 V units).

Note:
For bit 00 = 0:
It is not possible to reduce the supply voltage in p0210.
For bit 00 = 1:
With this setting the supply voltage in p0210 can be reduced to 100 V.
Booksize PU: only for operating mode p1300 = 19
Chassis PU: only for operating mode p1300 > 19 and closed-loop DC voltage control
For bit 01 = 0:
There is no external precharging of the DC/AC Motor Modules. The precharging monitoring is bypassed.
For bit 01 = 1:
There is external precharging of the DC/AC Motor Modules. The precharging monitoring is calculated.
For bit 03 = 0:
The DC link voltage limit is calculated from p0210.
For bit 03 = 1:
The DC link voltage limit is set to the maximum value of the power unit.
For bit 05 = 1:
The status of the inputs/outputs for the power unit contactors is displayed in r0256.
This only applies to chassis power units with 3 AC line connection and line contactors.
The status display is only effective after parameter save and POWER ON.

p0212 Power unit configuration / PU config

VECTOR_G (n/M)

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 bin

Description: Sets the power unit configuration.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Drive unit supply voltage reduced	Yes	No	-
01	External precharging present	Yes	No	-
03	Automatically adapt Vdc_max limit	No	Yes	-
05	Contactor display inputs/outputs status	Yes	No	9814
06	Reduction of the permissible minimum voltage during precharging	Yes	No	-

Dependency:
For bit 00:
Reduced supply voltages are only possible for booksize and chassis power units (DC/AC).
Bit 0 = 1 can only be set if r0192.22 = 1.
For bit 01 = 1:
The external precharging setting only affects the DC/AC power units.
For bit 03 = 1:
The automatic adaptation (reduction) of the Vdc max limit is deactivated (only for chassis power units). Bit 3 only has an effect, if bit 0 is simultaneously set.
See also: r0192, p0210

Caution:

For bit 00:
Working with reduced input voltages deactivates undervoltage detection.
For bit 03:
If the automatic setting of the Vdc max limit is deactivated, then all of the components connected to the DC link must be suitable for the maximum DC link voltage of the power unit (e.g. 820 V for 400 V units).

Note: For bit 00 = 0:
It is not possible to reduce the supply voltage in p0210.
For bit 00 = 1:
With this setting the supply voltage in p0210 can be reduced to 100 V.
Booksize PU: only for operating mode p1300 = 19
Chassis PU: only for operating mode p1300 > 19 and closed-loop DC voltage control
For bit 01 = 0:
There is no external precharging of the DC/AC Motor Modules. The precharging monitoring is bypassed.
For bit 01 = 1:
There is external precharging of the DC/AC Motor Modules. The precharging monitoring is calculated.
For bit 03 = 0:
The DC link voltage limit is calculated from p0210.
For bit 03 = 1:
The DC link voltage limit is set to the maximum value of the power unit.
For bit 05 = 1:
The status of the inputs/outputs for the power unit contactors is displayed in r0256.
This only applies to chassis power units with 3 AC line connection and line contactors.
The status display is only effective after parameter save and POWER ON.
For bit 06:
Precharging via the Motor Module is activated using this bit. To do this, while precharging, the undervoltage threshold for the pulse enable is reduced.
Precharging via the Motor Module can only be activated for S120 devices for separately excited synchronous generators where the DC link voltage control has been preselected (technology controller function module).

p0212 Power unit configuration / PU config

B_INF

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 bin

Description: Sets the power unit configuration.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Drive unit supply voltage reduced	Yes	No	-
02	Reserved	Yes	No	-
05	Contactor display inputs/outputs status	Yes	No	9814

Dependency: For bit 00:
Reduced supply voltages are only possible on booksize power units.
Bit 0 = 1 can only be set if r0192.22 = 1.
See also: r0192, p0210

Caution: For bit 00:
Working with reduced input voltages correspondingly reduces undervoltage detection.
This function may only be used by personnel with expert knowledge!

Note: For bit 00 = 0:
It is not possible to reduce the supply voltage in p0210 to below 180 V.
For bit 00 = 1:
With this setting the supply voltage in p0210 can be reduced to 70 V.
Bit 0 = 1 can only be set for booksize power units with a rated power of up to 40 kW.
The activation of this function is retentively saved in the unit and for incorrect design of the application can result in loss of warranty!
For bit 02:
Reserved. It is not permissible to set to 1.
For bit 05 = 1:
The status of the inputs/outputs for the power unit contactors is displayed in r0256.
This only applies to chassis power units with 3 AC line connection and line contactors.
The status display is only effective after parameter save and POWER ON.

p0230 Drive filter type motor side / Drv filt type mot

VECTOR_G

Can be changed: C2(1, 2)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	4	0

Description: Sets the type of the filter at the motor side.

Value:
0: No filter
1: Motor reactor
2: dv/dt filter
3: Sine-wave filter Siemens
4: Sine-wave filter third-party

Dependency: The following parameters are influenced using p0230:
p0230 = 1:
--> p0233 (power unit, motor reactor) = filter inductance
p0230 = 3:
--> p0233 (power unit, motor reactor) = filter inductance
--> p0234 (power unit sine-wave filter capacitance) = filter capacitance
--> p0290 (power unit overload response) = inhibit pulse frequency reduction
--> p1082 (maximum speed) = Fmax filter / pole pair number
--> p1800 (pulse frequency) >= nominal pulse frequency of the filter
--> p1802 (modulator modes) = space vector modulation without overcontrol
--> p1811 (modulator configuration) = wobbulation amplitude
--> p1909 (motor data identification, control word) = only Rs measurement
p0230 = 4:
--> p0290 (power unit overload response) = inhibit pulse frequency reduction
--> p1802 (modulator modes) = space vector modulation without overcontrol
--> p1811 (modulator configuration) = wobbulation amplitude
--> p1909 (motor data identification, control word) = only Rs measurement
The user must set the following parameters according to the data sheet of the sine-wave filter and also the user must check whether they are permitted.
--> p0233 (power unit, motor reactor) = filter inductance
--> p0234 (power unit sine-wave filter capacitance) = filter capacitance
--> p1082 (maximum speed) = Fmax filter / pole pair number
--> p1800 (pulse frequency) >= nominal pulse frequency of the filter
See also: p0233, p0234, p0290, p1082, p1800, p1802

Note: Only motor reactor filter type can be selected for a synchronous reluctance motor (RESM).
if a filter type cannot be selected, then this filter type is not permitted for the Motor Module.
p0230 = 1:
The output frequency of booksize power units with output reactors is restricted to 120 Hz, for blocksize and chassis power units, to 150 Hz. The maximum pulse frequency for booksize and blocksize power units is 4 kHz, for chassis power units, twice the rated pulse frequency (2.5 kHz or 4 kHz).
p0230 = 2:
Chassis power units with dv/dt filter, depending on the rated pulse frequency, may be operated with a maximum pulse frequency of p1800 = 2.5 kHz or 4 kHz. The output frequency is limited to 150 Hz.
p0230 = 3:
Sine-wave filters with a rated pulse frequency of 1.25 or 2.5 kHz should only be operated with a current controller sampling time p0115[0] = 400 µs, sine-wave filters with a rated pulse frequency of 2 or 4 kHz with p0115[0] = 250 µs.
The sine-wave filter cannot be selected if the current controller sampling time has not been appropriately set.
Chassis power units with sine-wave filter are limited to output frequencies of 115 Hz or 150 Hz.

p0233 Power unit motor reactor / PU mot reactor

VECTOR_G

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [mH]	1000.000 [mH]	0.000 [mH]

Description: Enter the inductance of a filter connected at the power unit output.

Dependency: This parameter is automatically pre-set when you select a filter via p0230 if a SIEMENS filter is defined for the power unit.
See also: p0230

Note: When exiting the quick commissioning using p3900 = 1, the parameter value is set to the value of the defined SIEMENS filter or to zero. In this specific case, the parameter value of a third-party filter has to be entered outside the commissioning phase (p0010 = 0). For p3900 = 3, the value is kept.

p0234 Power unit sine-wave filter capacitance / PU sine filter C

VECTOR_G

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [µF]	2000.000 [µF]	0.000 [µF]

Description: Enters the capacitance of a sine-wave filter connected at the power unit output.

Dependency: This parameter is automatically pre-set when you select a filter via p0230 if a SIEMENS filter is defined for the power unit.
See also: p0230

Note: The parameter value includes the sum of all of the capacitances of a phase connected in series (phase - ground).
When exiting the quick commissioning using p3900 = 1, the parameter value is set to the value of the defined SIEMENS filter or to zero. In this specific case, the parameter value of a third-party filter has to be entered outside the commissioning phase (p0010 = 0). For p3900 = 3, the value is kept.

p0235 Motor reactor in series number / L_mot in SeriesQty

VECTOR_G

Can be changed: C2(1, 2)	**Calculated:** -	**Access level:** 1
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	3	1

Description: Sets the number of reactors connected in series at the power unit output.

Dependency: See also: p0230

Notice: The reactor inductances should be the same.
If the number of motor reactors connected in series does not correspond to this parameter value, then this can result in an unfavorable control behavior.

r0238 Internal power unit resistance / PU R internal

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the internal resistance of the power unit (IGBT and line resistance).
Note: For a parallel circuit, the value corresponds to the resistance of a power unit.

p0247 Voltage measurement configuration / U_mes config

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 bin

Description: Sets the configuration for the voltage measurement.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
05	Use voltage measured values for flying restart	Yes	No	-

Warning:

For p0247.5 = 1 (only for induction motors):
If the Voltage Sensing Module (VSM) is connected to the line voltage, then the line frequency is interpreted as speed. In this case, the flying restart function cannot be used together with VSM and the bit should be set to 0.
If only one VSM is connected at the Motor Module, line synchronization must be deactivated (p3800 = 0), in order to be able to use flying restart together with VSM. If two VSMs are connected, the second VSM is used for flying restart.

Note: The functions are only available if the Motor Module is assigned a Voltage Sensing Module (VSM) (p0150, p0151).

p0249 Power unit cooling type / PU cool type

VECTOR_G

Can be changed: C2(1, 2)	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Sets the cooling type for booksize compact power units.
This therefore defines whether for these power units, the internal air cooling is shut down and instead, the "Cold-Plate" cooling type is used.

Value:
0: Air cooling int
1: Cold-Plate

Note: For booksize compact power units, there is a 4 at the 5th position of the Article number.
The parameter is irrelevant for all other power unit types.

p0251[0...n] Power unit heat sink fan operating hours counter / PU fan t_op

VECTOR_G, B_INF	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** PDS, p0120	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [h]	4294967295 [h]	0 [h]

Description: Displays the operating hours of the heat sink fan in the power unit.
The number of hours operated can only be reset to 0 in this parameter (e.g. after a fan has been replaced).

Dependency: See also: p0252, r0277
See also: A30042

Note: For r0193.13 = 0, the following applies:
For liquid-cooled chassis power units, the operating hours of the inner fan are displayed in p0251 and not in p0254.

p0252 Power unit heat sink fan operating time maximum / PU fan t_op max

VECTOR_G, B_INF	**Can be changed:** T	**Calculated:** -	**Access level:** 4
	Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [h]	500000 [h]	40000 [h]

Description: Sets the maximum operating time of the heat sink fan in the power unit.
The monitoring is deactivated with p0252 = 0.

Dependency: See also: p0251, r0277
See also: A30042

Notice: For firmware version < 5.1 of the power unit, the value is limited to 65535 hours.
For multi-axis power units, the same value must be entered for all axes.

Note: For power units with a model for the fan service life, the shortest conceivable service life is permanently saved. If p0252 is set to a value not equal to 0, then this saved value is always indicated in p0252.

p0254[0...n] Operating hours counter power unit fan inside the converter / PU inner fan t_op

VECTOR_G, B_INF	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** PDS, p0120	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [h]	4294967295 [h]	0 [h]

Description: Displays the power unit fan operating hours of the internal fan in the power unit.
The number of hours operated can only be reset to 0 in this parameter (e.g. after a fan has been replaced).

Dependency: See also: A30042

Note: For r0193.13 = 0, the following applies:
For liquid-cooled chassis power units, the operating hours of the inner fan are displayed in p0251 and not in p0254.

p0255[0...7] Power unit contactor monitoring time / PU cont t_mon

VECTOR_G, B_INF	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-1 [ms]	65535 [ms]	[0] 0 [ms] [1] 0 [ms] [2] -1 [ms] [3] -1 [ms] [4...7] 0 [ms]

Description: Sets the monitoring time for internal monitoring of the contactor feedback contacts.
For a value 0.0 or negative values, the particular monitoring is deactivated.
For index [0...3]:
Used to monitor the delay time between the control signal and feedback signals of the particular contactor.
For index [2, 3]:
The value -1.0 means that the particular opening time is taken from Index 0 or 1.
For index [4...7]:
Is used for simultaneity monitoring for a parallel connection. After a contactor has been opened or closed, this checks whether, after the monitoring time has expired, all contactors of the parallel connection have assumed the same state.

Index:
[0] = Precharging contactor closing time
[1] = Bypass contactor closing time
[2] = Precharging contactor opening time
[3] = Bypass contactor opening time
[4] = Simultaneity precharging contactor closing time
[5] = Simultaneity bypass contactor closing time
[6] = Simultaneity precharging contactor opening time
[7] = Simultaneity bypass contactor opening time

Dependency: See also: r0256
See also: F05118, F05119, F30060, F30061

Notice: For index [4...7]:
The simultaneity monitoring is only activate after parameter save and POWER ON.

Note:
- this parameter is only effective for chassis power units with 3 AC line connection and line contactors.
- the simultaneity monitoring can only be activated for a parallel connection.
- the feedback signal input of an open bypass contactor must be displayed in r0256 = 0.
- the feedback signal input of an open precharging contactor must be displayed in r0256 = 1.
- Determining practical monitoring times can be supported by a tracing r0256.

For power unit firmware version less than 4.6, the following applies:
There are no separate monitoring times for the delay time between opening and closing. In this case, the maximum of the opening time and closing time is effective.
For index [0...3]:
For Active Line Modules in the Chassis-2 format, the delay time monitoring is active and preset as follows:
- p0255[0, 2] = 250 ms
- p0255[1, 3] = 3000 ms

r0256.0...31 CO/BO: Power unit contactor inputs/outputs status / PU cont IO stat

VECTOR_G, B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 9814
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -

Dependency: See also: p0212

Note: This parameter is only effective for chassis power units with 3 AC line connection and line contactors.
PDS: Power unit Data Set

p0260 Cooling unit starting time 1 / RKA start time 1

VECTOR_G (Cool_unit), B_INF (Cool_unit)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** 9794, 9795
P group: Converter | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.0 [s]	60.0 [s]	5.0 [s]

Description: Sets starting time 1 to monitor the cooling unit after switch-on command.
After switching on, the following signals must be present within starting time 1:
- "RKA switched on"
- "RKA liquid flow OK"

When a fault occurs, an appropriate message is output.

Dependency: See also: F49152, F49153

Note: RKA: cooling unit

p0261 Cooling unit starting time 2 / RKA start time 2

VECTOR_G (Cool_unit), B_INF (Cool_unit)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** 9794, 9795
P group: Converter | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.0 [s]	1200.0 [s]	180.0 [s]

Description: Sets starting time 2 to monitor the cooling unit after switch-on command.
After switching on, the following signals must be present within starting time 2:
- "RKA conductivity, no fault"
- "RKA conductivity, no alarm"

When a fault occurs, an appropriate message is output.

Dependency: See also: p0266
See also: F49151

p0262 Cooling unit fault conductivity delay time / RKA cond t_del

VECTOR_G (Cool_unit), B_INF (Cool_unit)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** 9794, 9795

P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the status word of the cooling unit.

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	RKA switched on	Yes	No	-
	01	RKA ready for switching on	Yes	No	-
	02	RKA no alarm present	Yes	No	-
	03	RKA no fault present	Yes	No	-
	04	RKA no leaked fluid	Yes	No	-
	05	RKA liquid flow OK	Yes	No	-
	06	RKA conductivity no fault	Yes	No	9974
	07	RKA conductivity no alarm	Yes	No	9974

Dependency: See also: p0266

r0277[0...n] Power unit heat sink fan wear counter / PU fan wear_count

VECTOR_G, B_INF

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dyn. index:** PDS, p0120 **Function diagram:** -
P group: Modulation **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1
Min: **Max:** **Factory setting:**
- [%] - [%] - [%]

Description: Displays the wear counter of the heat sink fan in the power unit.
After a fan has been replaced, the wear can be reset by setting parameter p0251 to 0.
The wear counter is deactivated with p0252 = 0.

Dependency: See also: p0251, p0252
See also: A30042

Note: - for r0193.13 = 1, the wear counter is based on a model for the service life. For r0193.13 = 0, the value is determined as quotient from p0251 and p0252.
- for r0193.13 = 0, a 0 is displayed in the wear counter if the operating hours counter/wear counter was deactivated using p0252 = 0.

p0278 DC link voltage undervoltage threshold reduction / Vdc U_under red

VECTOR_G

Can be changed: T **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dyn. index:** - **Function diagram:** -
P group: Converter **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1
Min: **Max:** **Factory setting:**
-80 [V] 0 [V] 0 [V]

Description: Sets the absolute value by which the threshold to initiate the undervoltage fault (F30003) is reduced.

Dependency: See also: p0210, r0296
See also: F30003

Notice: When using a Control Supply Module (CSM) for 24 V supply from the DC link, the minimum continuous DC link voltage may not lie below 430 V.
DC link voltages in the range 300 ... 430 V are permissible up to a duration of 1 min.

Note: The resulting shutdown threshold can be read in r0296 and is dependent on the selected rated voltage (p0210) and the power unit being used.

p0279 DC link voltage offset alarm threshold / Vdc offs A thr

B_INF

Can be changed: T **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dyn. index:** - **Function diagram:** 8760, 8864, 8964
P group: Converter **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1
Min: **Max:** **Factory setting:**
0 [V] 500 [V] 0 [V]

Description: Sets the voltage threshold to initiate alarm A06810.
The value represents an offset so that the alarm threshold is obtained from the total of r0296 and p0279.

Dependency: See also: p0210, r0296
See also: A06810

Note: The absolute value of the undervoltage threshold r0296 depends on the selected unit supply voltage (p0210).

p0287[0...1] Ground fault monitoring shutdown threshold / Gnd flt threshold

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [%]	100.0 [%]	[0] 6.0 [%] [1] 16.0 [%]

Description: Sets the shutdown thresholds for the ground fault monitoring.
The setting is made as a percentage of the maximum current of the power unit (r0209).

Index: [0] = During precharging
[1] = Regular

Dependency: See also: F30021

Note: The parameter only applies to booksize and chassis power units.
Sets the thresholds:
- the prerequisite is at least firmware version 2.2 of the power unit.
Deactivate ground fault monitoring:
- Sequence: --> p0287[1] = 0 --> p0287[0] = 0
- irrespective of the firmware version of the power unit.

r0289 CO: Maximum power unit output current / PU I_outp max

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Display and connector output for the maximum actual output current of the power unit.
Derating factors must be taken into account for this value.

p0290 Power unit overload response / PU overl response

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** 8021
	P group: Converter	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	13	0

Description: Sets the response to a thermal overload condition of the power unit.

The following quantities can result in a response to thermal overload:

- heat sink temperature (r0037[0]).
- chip temperature (r0037[1]).
- power unit overload I2t (r0036).

Possible measures to avoid thermal overload:

- reduce the output current limit r0289 and r0067 (for closed-loop speed/velocity or torque/force control) or the output frequency (for U/f control indirectly via the output current limit and the intervention of the current limiting controller).
- reduce the pulse frequency.

A reduction, if parameterized, is always realized after an appropriate alarm is output.

For p0290 = 0:

When a temperature alarm threshold is exceeded, the output current is reduced, and in turn, the output frequency. If the current reduction is not sufficient to thermally relieve the power unit, when the drive reaches the temperature fault threshold it switches off.

This setting is not suitable for drives requiring a constant torque.

Application:

pumps, fans

For p0290 = 1:

The power unit operates at the required operating point. When the fault threshold is reached, the drive switches off and an appropriate fault is output.

Application:

Drive applications where, as a result of the underlying process, no setpoint deviations of individual drives in the group are permitted - or where the pulse frequency must be strictly maintained.

For p0290 = 2:

The pulse frequency is reduced to a permissible minimum when a temperature alarm threshold is exceeded. If the pulse frequency reduction is not sufficient to thermally relieve the power unit, then the output current is also reduced.

Application:

Drives with a low dynamic performance and occasional overload where speed deviations are permissible.

For p0290 = 3:

Only the pulse frequency is reduced to a permissible minimum when a temperature alarm threshold is exceeded.

Application:

Drives with a low dynamic performance and occasional overload where a speed deviation is not permissible.

For p0290 = 10:

For Booksize devices, in addition to the heat sink and chip temperatures, the difference between the two temperatures is monitored as an additional variable. When a temperature threshold is exceeded, the output current is reduced - and in turn, the output frequency.

This overload response is activated as default setting for Booksize devices with a pulse frequency higher than or equal to 16 kHz.

For p0290 = 12:

In this particular case, the chip temperature is evaluated based on the actual load. If the temperature exceeds this alarm threshold, then the pulse frequency is reduced to a permissible minimum. The output current is only reduced if the actual chip temperature increases above a certain temperature threshold.

Application:

Drives that are frequently started and accelerated - and which manifest a significantly fluctuating torque profile (e.g. centrifuges, flywheel presses, cranes).

For p0290 = 13:

In this particular case, the chip temperature is evaluated based on the actual load. If the temperature exceeds this alarm threshold, then the pulse frequency is reduced to a permissible minimum.

Application:

Drives that are frequently started and accelerated - and which manifest a significantly fluctuating torque profile, and where the output current is not to be reduced (e.g. centrifuges, flywheel presses, cranes).

Value:
0: Reduce output current
1: No reduction shutdown when overload threshold is reached
2: Reduce the pulse frequency and output current
3: Reduce the pulse frequency
10: Automatic output current reduction
12: Automatic pulse frequency and output current reduction
13: Automatic pulse frequency reduction

Dependency: If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), then only responses can be selected without reducing the pulse frequency (p0290 = 0, 1, 10).

For a thermal power unit overload, an appropriate alarm or fault is output, and r2135.15 or r2135.13 set.

For p0290 = 10:

This response is only applicable for booksize power units.

See also: r0036, r0037, r0108, p0230, r2135

See also: A05000, A05001, A07805

Notice: If the thermal overload of the power unit is not sufficiently reduced by the actions taken, the drive is always shut down. This means that the power unit is always protected irrespective of the setting of this parameter.

Note: Under overload conditions, the current and torque limit are reduced, and therefore the motor is braked and forbidden speed ranges (e.g. minimum speed p1080 and suppression [skip] speeds p1091 ... p1094) can be passed through.

When the motor data identification routine is selected, parameter p0290 cannot be changed.

For p0290 = 0, 2, 12:

This is setting is only practical if the load decreases with decreasing speed (e.g. for applications with variable torque such as for pumps and fans).

For p0290 = 2, 3, 12, 13:

The I2t overload detection of the power unit does not influence the response "Reduce pulse frequency".

For p0290 = 10, 12, 13:

The possible load duty cycles, calculated based on the previous model (p0290 = 0, 1, 2, 3) for booksize power units cannot be transferred in every case. This is the reason that we recommend that you contact our application support department if you are uncertain about dimensioning the device.

r0293 CO: Power unit alarm threshold model temperature / PU A_thr mod_temp

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8021
P group: Converter	**Unit group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [°C]	- [°C]	- [°C]

Description: Temperature alarm threshold for the difference from the chip and heat sink temperature in the thermal model.

Dependency: See also: r0037

See also: F30024

Note: The parameter is only relevant for chassis power units.

p0294 Power unit alarm with I2t overload / PU I2t alarm thr

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8021
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
10.0 [%]	100.0 [%]	95.0 [%]

Description: Sets the alarm threshold for the I2t power unit overload.

Drive:

If this threshold is exceeded, an overload alarm is generated and the system responds as parameterized in p0290.

Infeed:

When the threshold value is exceeded, only an overload alarm is output.

Dependency: See also: r0036, p0290
See also: A07805
Note: The I2t fault threshold is 100 %. If this value is exceeded, fault F30005 is output.

p0294 Power unit alarm with I2t overload / PU I2t alarm thr

B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8021
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
10.0 [%]	100.0 [%]	95.0 [%]

Description: Sets the alarm threshold for the I2t power unit overload.
Dependency: See also: r0036
See also: A07805
Note: The parameter is only relevant for booksize units!

p0295 Fan run-on time / Fan run-on time

VECTOR_G, B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [s]	600 [s]	0 [s]

Description: Sets the fan run-on time after the pulses for the power unit have been canceled.
Note: - Under certain circumstances, the fan can continue to run for longer than was set (e.g. as a result of the excessively high heat sink temperature).
- For values less than 1 s, a 1 s run on time for the fan is active.

r0296 DC link voltage undervoltage threshold / Vdc U_under_thr

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [V]	- [V]	- [V]

Description: Threshold to detect a DC link undervoltage.
If the DC link voltage falls below this threshold, the drive unit is tripped due to a DC link undervoltage condition.
Dependency: See also: p0278
See also: F30003
Note: The value depends on the device type and the selected device rated voltage (p0210).
For booksize drive units, the following applies:
The undervoltage threshold can be reduced with p0278.

r0296 DC link voltage undervoltage threshold / Vdc U_under_thr

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8750, 8760, 8850, 8864, 8950, 8964
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [V]	- [V]	- [V]

Description: Threshold to detect a DC link undervoltage.
If the DC link voltage falls below this threshold, the drive unit is tripped due to a DC link undervoltage condition.

Dependency: See also: F30003
Note: The value depends on the device type and the selected device rated voltage (p0210).

r0297 DC link voltage overvoltage threshold / Vdc U_over_thr

VECTOR_G, B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8750, 8760, 8850, 8864, 8950, 8964
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [V]	- [V]	- [V]

Description: Threshold to detect a DC link overvoltage.
If the DC link voltage exceeds the threshold specified here, the drive unit is tripped due to DC link overvoltage.
Dependency: See also: F30002

p0300[0...n] Motor type selection / Mot type sel

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** MDS, p0130	**Function diagram:** 6310
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	10001	0

Description: Selects the motor type or starts to read in the motor parameters for a motor with DRIVE-CLiQ (p0300 = 10000 or 10001, if there is a second data set).
For p0300 < 10000 the following applies:
The first digit of the parameter value always defines the general motor type and corresponds to the third-party motor belonging to a motor list:
1 = induction motor
2 = synchronous motor
5 = synchronous motor separately excited
7 = SIEMOSYN motor
8 = reluctance motor (for textile applications)
xx = motor without code number
xxx = motor with code number
The type information must be entered to filter motor-specific parameters and to optimize the operating characteristics and behavior. For example, for synchronous motors, power factor (p0308) is neither used nor displayed (in the BOP/AOP).
The following applies for values < 100:
Motor data must be manually entered.
The following applies for values >= 100:
Motor data are automatically loaded from an internal list.

Value:

0: No motor
1: Induction motor
2: Synchronous motor
6: Synchronous reluctance motor
7: SIEMOSYN synchronous motor
8: Reluctance motor textile
10: 1LE1 induction motor (not a code number)
11: 1LA1 induction motor (not a code number)
12: 1LE2 induction motor (not a code number)
13: 1LG6 induction motor (not a code number)
14: 1xx1 SIMOTICS FD induction motor (not a code number)
15: 1LA5 induction motor (not a code number)
16: 1LA6 induction motor (not a code number)
17: 1LA7 induction motor (not a code number)
18: 1xx8 SIMOTICS TN induction motor (not a code number)
19: 1LA9 induction motor (not a code number)
100: 1LE1 induction motor
101: 1PC1 induction motor
102: 1PH2 induction motor
104: 1PH4 induction motor
105: 1LE5 induction motor
106: 1LE6 induction motor
107: 1PH7 induction motor
108: 1PH8 induction motor
111: xxxx induction motor OEM
133: 2KJ3 induction motor
134: 1PM4 induction motor
136: 1PM6 induction motor
166: 1PL6 induction motor
222: xxxx synchronous motor OEM
264: 1FW4 synchronous motor
283: 1FW3 synchronous motor
600: 1FP1 standard reluctance motor
603: 1FP3 synchronous reluctance motor OEM
608: 1PH8 synchronous reluctance motor
632: 2KJ3 synchronous reluctance motor
10000: Motor with DRIVE-CLiQ
10001: Motor with DRIVE-CLiQ 2nd data set

Dependency:

Motors, selection 206, 236, 237 cannot be operated (also not as motor with DRIVE-CLiQ).

p0300 = 5 cannot be selected with SINAMICS G.

When the motor type is changed, the code number in p0301 may be reset to 0.

p0300 = 12 can only be selected for p0100 = 1 (NEMA).

When selecting p0300 = 10 ... 19, parameters p0335, p0626, p0627, and p0628 of the thermal motor model are pre-assigned as a function of p0307 and p0311.

When selecting a 1FW4 motor – if the motor database permits this – when exiting commissioning, then p1750.5 is automatically set. This is the reason that after exiting commissioning, all parameters must be saved and a warm restart must be initiated (e.g. p0009 = 30, p0976 = 3).

See also: p0301

Caution:

A permanent-magnet synchronous motor cannot be operated with an SSI encoder without HTL/TTL track.

A separately excited synchronous motor can only be operated with an SSI encoder if this is used as the second encoder and an HTL/TTL encoder is used as the first encoder.

Notice: If a catalog motor is selected (p0300 >= 100) and an associated motor code number (p0301), then the parameters that are associated with this list cannot be changed (write protection). The write protection is canceled if the motor type p0300 is set to a non-Siemens motor that matches p0301 (e.g. p0300 = 2 for p0301 = 2xxxx). Write protection is automatically canceled when the results of motor data identification are copied to the motor parameters.

The motor type of a catalog motor corresponds to the upper three digits of the code number or the following assignment (if the particular motor type is listed):

Type/code number ranges

100 / 100xx, 110xx, 120xx, 130xx, 140xx, 150xx, 160xx, 170xx, 180xx, 190xx

101 / 101xx

102 / 102xx, 122xx

104 / 104xx, 114xx, 124xx

105 / 105xx

107 / 107xx, 117xx, 127xx

108 / 108xx, 118xx, 128xx, 138xx, 148xx, 158xx

134 / 134xx, 144xx, 154xx

136 / 136xx, 146xx, 156xx

166 / 166xx, 176xx, 186xx

271 / 271xx, 281xx

264 / 264xx, 274xx, 284xx, 294xx

283 / 283xx, 293xx

600 / 600xx, 610xx, 620xx

603 / 603xx, 613xx, 623xx

608 / 608xx, 618xx, 628xx

For OEM motors:

111 / 111xx, 112xx, 113xx

222 / 222xx, 223xx, 224xx

For 1PQ8 motors (p0300 = 18) the fan type p0335 should be set to 5.

Note: With p0300 = 10000, for a motor with DRIVE-CLiQ, the motor parameters are automatically downloaded, with p0300 = 10001, the motor parameters of a second data set (if available).

If a motor type has not been selected (p0300 = 0), then the drive commissioning routine cannot be exited.

A motor type with a value above p0300 >= 100 describes motors for which a motor parameter list exists.

Motor types with a value below p0300 < 100 correspond to the selection of a third-party motor. When appropriately selected, this means that the motor parameters are pre-assigned the settings for a third-party motor.

This also applies for parameters for a motor with DRIVE-CLiQ. In this case p0300 can only be set to p0300 = 10000 or 10001 (read motor parameters) or to the corresponding non-Siemens motor (first digit of the motor code number) in order to be able to cancel the write protection.

p0301[0...n] Motor code number selection / Mot code no sel

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: SESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: The parameter is used to select a motor from a motor parameter list.

When changing the code number (with the exception to the value 0), all of the motor parameters are pre-assigned from the internally available parameter lists.

Dependency: Code numbers can only be selected for motor types that correspond to the motor type selected in p0300. For 1PH2, 1PH4, 1PH7, 1PM4, 1PM6, 1FT6 motors, code numbers are also possible, whose fourth decimal position is greater by a value of 1 or 2 than the matching motor type in p0300. For 1FE1 motors, the third decimal position can be higher by a value of 1.

See also: p0300

Note: The motor code number can only be changed if the matching catalog motor was first selected in p0300.

For a motor with DRIVE-CLiQ, p0301 cannot be changed. In this case, p0301 is automatically written to the code number of the motor parameter read in (r0302) if p0300 is set to 10000.

When selecting a catalog motor (p0300 >= 100), drive commissioning can only be exited if a code number is selected.

r0302[0...n] Motor code number of motor with DRIVE-CLiQ / Mot code mot w DQ

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the motor code number from the saved motor data from a motor with DRIVE-CLiQ.

Note: Drive commissioning can only be exited if the code number that was downloaded (r0302) matches the stored code number (p0301). If the numbers differ, then the motor data set should be re-loaded using p0300 = 10000.

The motor data are always expected from the first encoder that is assigned to the drive data sets (refer to p0187 = encoder 1) data set number.

The value is not updated cyclically but only on specific events (e.g. update DRIVE-CLiQ device).

r0302 = 0: No motor with DRIVE-CLiQ found

r0303[0...n] Motor with DRIVE-CLiQ status word / Motor w DQ ZSW

VECTOR_G

Note: SMI: SINAMICS Sensor Module Integrated

p0304[0...n] Rated motor voltage / Mot U_rated

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6301, 6724
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [Vrms]	20000 [Vrms]	0 [Vrms]

Description: Sets the rated motor voltage (rating plate).

Dependency: See also: p0349

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When the parameter value is entered the connection type of the motor (star-delta) must be taken into account.

When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).

p0305[0...n] Rated motor current / Mot I_rated

VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6301
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the rated motor current (rating plate).

Dependency: See also: p0349

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

If p0305 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

If the rated motor current exceeds twice the maximum drive converter current (r0209), then the maximum current is reduced due to the current harmonics that increase overproportionally (r0067).

Note: When the parameter value is entered the connection type of the motor (star-delta) must be taken into account.

When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).

p0306[0...n] Number of motors connected in parallel / Mot parallel qty

VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: Unsigned8	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: SESM, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1	50	1

Description: Number of motors that can be operated in parallel using one motor data set.

Depending on the motor number entered, internally an equivalent motor is calculated.

The following should be carefully observed for motors connected in series:

The following rating plate data should only be entered for one motor:

- resistances and inductances: p0350 ... p0361
- currents: p0305, p0320, p0323, p0325, p0329, p0389, p0390, p0391, p0392
- power ratings: p0307
- masses/moments of inertia: p0341, p0344

All other parameters take into account the replacement/equivalent motor (e.g. r0331, r0333).

Recommendation: For motors connected in parallel, external thermal protection should be provided for each individual motor.

Dependency: See also: r0331

Caution: The motors to be connected up in parallel must be of the same type and the same size (power rating) (identical Article No. [MLFB]).

The mounting regulations when connecting motors in parallel must be carefully maintained! Especially for synchronous motors, the pole position of motors that are rigidly coupled with one another (mechanically) must be identical.

The number of motors set must correspond to the number of motors that are actually connected in parallel.

After changing p0306, it is imperative that the control parameters are adapted (e.g. using automatic calculation with p0340 = 1).

For synchronous motors connected in parallel with p1300 >= 20, be following applies:

- the individual motors must be mechanically coupled with one another and the EMF must be aligned to one another.

For induction motors that are connected in parallel, but which are not mechanically coupled with one another, then the following applies:

- an individual motor must not be loaded beyond its stall point.

Notice: If p0306 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is appropriately pre-assigned. This is not the case when commissioning the motor (p0010 = 3).

Note: Only operation with U/f characteristic makes sense if more than 10 identical motors are connected in parallel.
Separately excited synchronous motors must not be connected in parallel.
Synchronous and reluctance motors that are not coupled with one another align themselves when the pulses are switched in. If the motors have different load levels, then equalization currents flow between the motors.

p0307[0...n] Rated motor power / Mot P_rated

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** 14_6	**Unit selection:** p0100
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-100000.00 [kW]	100000.00 [kW]	0.00 [kW]

Description: Sets the rated motor power (rating plate).

Dependency: IECdrives (p0100 = 0): Units kW
NEMA drives (p0100 = 1): Units hp
See also: p0100

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected.
Information in p0300 should be carefully observed when removing write protection.

Note: For generators, a negative rated power should be entered.
When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).

p0308[0...n] Rated motor power factor / Mot cos phi rated

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-0.990	1.000	0.000

Description: Sets the rated motor power factor (cos phi, rating plate).
For a parameter value of 0.000, the power factor is internally calculated and displayed in r0332.

Dependency: This parameter is only available for IEC motors (p0100 = 0).
See also: p0100, p0309, r0332

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected.
Information in p0300 should be carefully observed when removing write protection.
For separately excited synchronous motors (p0300 = 5) negative values for the power factor are interpreted as overexcitation.
For all other motor types, the sign is ignored.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).
When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).

p0309[0...n] Rated motor efficiency / Mot eta_rated

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [%]	99.9 [%]	0.0 [%]

Description: Sets the rated motor efficiency (rating plate).
For a parameter value of 0.0, the power factor is internally calculated and displayed in r0332.

Dependency: This parameter is only visible for NEMA motors (p0100 = 1, 2).
See also: p0100, p0308, r0332

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected.
Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

p0310[0...n] Rated motor frequency / Mot f_rated

VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6301
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [Hz]	3000.000 [Hz]	0.000 [Hz]

Description: Sets the rated motor frequency (rating plate).

Dependency: The number of pole pairs (r0313) is automatically re-calculated when the parameter is changed (together with p0311), if p0314 = 0.

The rated frequency is restricted to values between 1.00 Hz and 650.00 Hz.

See also: p0311, r0313, p0314

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

If p0310 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

Note: When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).

p0311[0...n] Rated motor speed / Mot n_rated

VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the rated motor speed (rating plate).

For VECTOR the following applies (p0107):

For p0311 = 0, the rated motor slip of induction motors is internally calculated and displayed in r0330.

It is especially important to correctly enter the rated motor speed for vector control and slip compensation for U/f control.

Dependency: If p0311 is changed and for p0314 = 0, the pole pair (r0313) is re-calculated automatically.

See also: p0310, r0313, p0314

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

If p0311 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

Note: When commissioned for the first time or after the factory settings have been restored, the parameter is preassigned a value that matches the power unit; this value also depends on the set standard (IEC/NEMA, p0100).

r0313[0...n] CO: Motor pole pair number, actual (or calculated) / MotPolePair no act

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Function diagram:** 5300
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the number of motor pole pairs. The value is used for internal calculations.

r0313 = 1: 2-pole motor

r0313 = 2: 4-pole motor, etc.

Dependency: For p0314 > 0, the entered value is displayed in r0313.
For p0314 = 0, the pole pair number (r0313) is automatically calculated from the rated power (p0307), rated frequency (p0310) and rated speed (p0311).
See also: p0307, p0310, p0311, p0314

Note: For the automatic calculation, the pole pair number is set to the value of 2 if the rated speed or the rated frequency is zero.

p0314[0...n] Motor pole pair number / Mot PolePair no

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	255	0

Description: Sets the motor pole pair number.
p0314 = 1: 2-pole motor
p0314 = 2: 4-pole motor, etc.

Dependency: For p0314 = 0, the pole pair number is automatically calculated from the rated frequency (p0310) and the rated speed (p0311) and displayed in r0313.

Notice: If p0314 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).
For induction motors, the value need only be input if the rated data of a generator is entered therefore resulting in a negative rated slip. In this case, the number of pole pairs in r0313 is too low by 1 and must be manually corrected.

p0316[0...n] Motor torque constant / Mot kT

VECTOR_G

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** 28_1	**Unit selection:** p0100
Not for motor type: ASM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [Nm/A]	400.000 [Nm/A]	0.000 [Nm/A]

Description: Sets the torque constant of the synchronous motor.
p0316 = 0:
The torque constant is calculated from the motor data.
p0316 > 0:
The selected value is used as torque constant.

Dependency: See also: r0334

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: This parameter is not used for induction motors (p0300 = 1xx).

p0318[0...n] Motor stall current / Mot I_standstill

VECTOR_G

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8017
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the stall current for synchronous motors (p0300 = 2xx), as well as for synchronous reluctance motors (p0300 = 6xx).

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is used for the I2t monitoring of the motor (refer to p0611).
This parameter is not used for induction motors (p0300 = 1xx).
For synchronous reluctance motors, the current corresponds to a winding temperature increase of 105 K at a speed of 20 % of the rated speed.

p0320[0...n] Motor rated magnetizing current/short-circuit current / Mot I_mag_rated

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 5722
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [Arms]	5000.000 [Arms]	0.000 [Arms]

Description: Induction motors:
Sets the rated motor magnetizing current.
For p0320 = 0.000 the magnetizing current is internally calculated and displayed in r0331.
Synchronous motors:
Sets the rated motor short-circuit current.

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The magnetization current p0320 for induction motors (not for catalog motors) is reset when quick commissioning is exited with p3900 > 0.
VECTOR:
If, for induction motors, the magnetizing current p0320 is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance p0360 is changed so that the EMF r0337 remains constant.

p0322[0...n] Maximum motor speed / Mot n_max

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]

Description: Sets the maximum motor speed.

Dependency: See also: p1082

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.
If p0322 is changed during quick commissioning (p0010 = 1), the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

Note: The parameter has no significance for a value of p0322 = 0.

p0323[0...n] Maximum motor current / Mot I_max

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [Arms]	20000.00 [Arms]	0.00 [Arms]

Description: Sets the maximum permissible motor current (e.g. de-magnetizing current for synchronous motors).

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.
If p0323 is changed during quick commissioning (p0010 = 1), then the maximum current p0640 is pre-assigned accordingly. This is not the case when commissioning the motor (p0010 = 3).

Note: The parameter has no effect for induction motors.
The parameter has not effect for synchronous motors if a value of 0.0 is entered. The user-selectable current limit is entered into p0640.

p0324[0...n] Winding maximum speed / Winding n_max

VECTOR_G

Can be changed: C2(1, 3)	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]

Description: Sets the maximum speed for the winding.
The following applies when calculating the maximum speed (p1082):
- for p0324 = 0 or p0532 = 0, p0322 is used.
- for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.

Dependency: See also: p0322, p0532, p1082

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.
If p0324 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).

p0325[0...n] Motor pole position identification current 1st phase / Mot PolID I 1st Ph

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [Arms]	10000.000 [Arms]	0.000 [Arms]

Description: Sets the current for the 1st phase of the two-stage technique for pole position identification routine.
The current of the 2nd phase is set in p0329.
The two-stage technique is selected with p1980 = 4.

Dependency: See also: p0329, p1980, p1982, r1984, r1985, r1987, p1990

Notice: When the motor code (p0301) is changed, it is possible that p0325 is not pre-assigned.
p0325 can be pre-assigned using p0340 = 3.

Note: The value is automatically pre-assigned for the following events:
- For p0325 = 0 and automatic calculation of the closed-loop control parameters (p0340 = 1, 2, 3).
- for quick commissioning (p3900 = 1, 2, 3).

p0327[0...n] Optimum motor load angle / Mot phi_load opt

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 5722, 6721
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [°]	135.0 [°]	90.0 [°]

Description: Sets the optimum load angle for synchronous motors with reluctance torque (e.g. 1FE motors).
SERVO: The load angle is measured at 1.5 x rated motor current.
VECTOR: The load angle is measured at the rated motor current.

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: This parameter has no significance for induction motors.
For synchronous motors without reluctance torque, a angle of 90 degrees must be set.
When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0328[0...n] Motor reluctance torque constant / Mot kT_reluctance

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-1000.00 [mH]	1000.00 [mH]	0.00 [mH]

Description: Sets the reluctance torque constant for synchronous motors with reluctance torque (e.g. 1FE ... motors).
This parameter has no significance for induction motors.

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: For synchronous motors without reluctance torque, the value 0 must be set.

p0329[0...n] Motor pole position identification current / Mot PolID current

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the current for the pole position identification routine (p1980 = 1).
For a two-stage technique (p1980 = 4), the current is set for the 2nd phase.
The current for the 1st phase is set in p0325.

Dependency: The following applies for vector drives:
If a maximum current (p0323) was not parameterized, then p0329 is limited to the rated motor current.
See also: p0325, p1980, p1982, r1984, r1985, r1987, p1990

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

r0330[0...n] Rated motor slip / Mot slip_rated

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the rated motor slip.

Dependency: The rated slip is calculated from the rated frequency, rated speed and number of pole pairs.
See also: p0310, p0311, r0313

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0331[0...n] Actual motor magnetizing current/short-circuit current / Mot I_mag_rtd act

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 5722, 6722, 6724
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Arms]	- [Arms]	- [Arms]

Description: Induction motor:
Displays the rated magnetizing current from p0320.
For p0320 = 0, the internally calculated magnetizing current is displayed.
Synchronous motor:
Displays the rated short-circuit current from p0320.

Dependency: If p0320 was not entered, then the parameter is calculated from the rating plate parameters.

Note: In the case of multi-motor operation r0331 is increased by the factor p0306 compared to p0320.

r0332[0...n] Rated motor power factor / Mot cos phi rated

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the rated power factor for induction motors.
For IEC motors, the following applies (p0100 = 0):
For p0308 = 0, the internally calculated power factor is displayed.
For p0308 > 0, this value is displayed.
For NEMA motors, the following applies (p0100 = 1, 2):
For p0309 = 0, the internally calculated power factor is displayed.
For p0309 > 0, this value is converted into the power factor and displayed.

Dependency: If p0308 is not entered, the parameter is calculated from the rating plate parameters.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0333[0...n] Rated motor torque / Mot M_rated

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 7_4	**Unit selection:** p0100
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Nm]	- [Nm]	- [Nm]

Description: Displays the rated motor torque.

Dependency: IEC drives (p0100 = 0): unit Nm
NEMA drives (p0100 = 1): unit lbf ft

Note: For induction and reluctance motors, r0333 is calculated from p0307 and p0311.
For synchronous motors, r0333 is calculated from p0305, p0316, p0327 and p0328. The result can deviate from the input in p0312. If p0316 = 0, then r0333 = p0312 is displayed.
In the case of multi-motor operation r0333 is increased by the factor p0306 compared to the rated torque of an individual motor.

r0334[0...n] Actual motor-torque constant / Mot kT act

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 28_1	**Unit selection:** p0100
	Not for motor type: ASM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Nm/A]	- [Nm/A]	- [Nm/A]

Description: Displays the torque constant of the synchronous motor used.

Dependency: IEC drives (p0100 = 0): unit Nm / A

NEMA drives (p0100 = 1): unit lbf ft / A

See also: p0316

Note: This parameter is not used for induction motors (p0300 = 1xx).

For synchronous motors, parameter r0334 = p0316 is displayed. For p0316 = 0, r0334 is calculated from p0305 and p0312 or p0305, p0307, and p0311.

p0335[0...n] Motor cooling type / Mot cool type

VECTOR_G	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	128	0

Description: Sets the motor cooling system used.

Value:
0: Natural ventilation
1: Forced cooling
2: Liquid cooling
4: Natural ventilation and internal fan
5: Forced cooling and internal fan
6: Liquid cooling and internal fan
128: No fan

Dependency: For 1LA5 and 1LA7 motors (p0300), the parameter is pre-set as a function of p0307 and p0311.

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter influences the thermal 3-mass motor model.

1LA1 and 1LA8 motors are characterized by the fact that they have an internal rotor fan. This "internal cooling" lies within the motor frame and is not visible. Air is not directly exchanged with the motor ambient air.

For 1PQ8 motors, p0335 should be set to 5 as these motors are force-ventilated motors.

The setting p0335 = 128 applies for 1LA7 motors, frame size 56 (these are operated without a fan).

r0336[0...n] Actual rated motor frequency / Mot f_rated act

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Hz]	- [Hz]	- [Hz]

Description: Displays the rated frequency of the motor.

For p0310 > 0, this value is displayed.

Dependency: See also: p0311, p0314

Note: For p0310 = 0 or for synchronous motors, the rated motor frequency r0336 is calculated from the rated speed and the pole pair number.

For p0310 > 0, this value is displayed (not for synchronous motors).

r0337[0...n] Rated motor EMF / Mot EMF_rated

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the rated EMF of the motor.

Note: EMF: Electromotive force

r0339[0...n] Rated motor voltage / Mot U_rated

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the rated motor voltage.

Note: For induction motors (p0300 = 1xx) the parameter is set to p0304.

For synchronous motors, parameter r0339 = p0304 is displayed. If p0304 = 0, then r0339 is calculated from p0305 and p0316.

p0340[0...n] Automatic calculation motor/control parameters / Calc auto par

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	5	0

Description: Setting to automatically calculate motor parameters and U/f open-loop and closed-loop control parameters from the rating plate data.

Value:
0: No calculation
1: Complete calculation
2: Calculation of equivalent circuit diagram parameters
3: Calculation of closed-loop control parameters
4: Calculation of controller parameters
5: Calculation of technological limits and threshold values

Notice:

After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

The following parameters are influenced using p0340:

The parameters designated with (*) are not overwritten for catalog motors (p0300 > 100).

SERVO:

p0340 = 1:

--> All of the parameters influenced for p0340 = 2, 3, 4, 5

--> p0341 (*)

--> p0344, p0600, p0640, p1082, p2000, p2001, p2002, p2003, p2005, p2007

p0340 = 2:

--> p0350 (*), p0354 (*), p0356 (*), p0358 (*), p0360 (*)

--> p0625 (matching p0350), p0626 ... p0628

p0340 = 3:

--> All of the parameters influenced for p0340 = 4, 5

--> p0344, p0600, p0640, p1082, p1145, p1231, p1232, p1281, p1333, p1335, p1349, p1360, p1362, p1441, p1442, p1576, p1577, p1609, p1610, p1611, p1619, p1620, p1621, p1654, p1726, p1825, p1828 ... p1832, p1901, p1909, p1959, p2000, p2001, p2002, p2003, p2005, p2007, p3806. p3927, p3928

p0340 = 2:

--> p0350 (*), p0354 ... p0361 (*), p0652 ... p0660

--> p0625 (matching p0350)

p0340 = 3:

--> All of the parameters influenced for p0340 = 4, 5

--> p0346, p0347, p0492, p0622, p1262, p1320 ... p1327, p1582, p1584, p1612, p1616, p1744, p1748, p1749, p1755, p1756, p2178

p0340 = 4:

--> p1290, p1292, p1293, p1299, p1338, p1339, p1340, p1341, p1345, p1346, p1460, p1461, p1462, p1463, p1464, p1465, p1470, p1472, p1590, p1592, p1600, p1628, p1629, p1630, p1643, p1703, p1715, p1717, p1740, p1756, p1757, p1760, p1761, p1764, p1767, p1780, p1781, p1783, p1785, p1786, p1795, p7036, p7037, p7038

p0340 = 5:

--> p0260 ... p0264, p1037, p1038, p1520, p1521, p1530, p1531, p1574, p1750, p1802, p1803, p2140, p2141, p2142, p2148, p2150, p2155, p2161 ... p2164, p2175, p2177, p2194, p3207, p3208, p3236, p3237, p3806, p3815, p3820 ... p3829

Note: The calculation is not performed, if the power unit is deactivated.

p0340 = 1 contains the calculations of p0340 = 2, 3, 4, 5 without overwriting the motor parameters from the Siemens motor lists (p0301 > 0).

p0340 = 2 calculates the motor parameters (p0350 ... p0360), but only if it does not involve a Siemens catalog motor (p0301 = 0).

p0340 = 3 contains the calculations of p0340 = 4, 5.

p0340 = 4 only calculates the controller parameters.

p0340 = 5 only calculates the controller limits.

When quick commissioning is exited using p3900 > 0, p0340 is automatically set to 1.

At the end of the calculations, p0340 is automatically set to 0.

If the STARTER commissioning tool writes a 3 into p0340 when "Downloading to target device", then this corresponds to a "Complete calculation of the motor/control parameters without equivalent circuit diagram data". The same calculations are carried out as for p0340 = 1, however, without the equivalent circuit diagram parameters of the motor (p0340 = 2), the motor moment of inertia (p0341) and the motor mass (p0344).

For third-party linear synchronous motors (p0300 = 4) equivalent circuit diagram data are not calculated (p0340 = 2).

p0341[0...n] Motor moment of inertia / Mot m_inert

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 5042, 5210, 6020, 6030, 6031
P group: Motor	**Unit group:** 25_1	**Unit selection:** p0100
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000000 [kgm²]	100000.000000 [kgm²]	0.000000 [kgm²]

Description: Sets the motor moment of inertia (without load).

Dependency: IEC drives (p0100 = 0): unit kg m^2

NEMA drives (p0100 = 1): unit lb ft^2

The parameter value is included, together with p0342, in the rated starting time of the motor.

See also: p0342, r0345

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: SERVO:

p0341 * p0342 + p1498 influence the speed/torque precontrol in encoderless operation.

VECTOR:

The product of p0341 * p0342 is used when the speed controller (p0340 = 4) is calculated automatically.

p0342[0...n] Ratio between the total and motor moment of inertia / Mot m_inert ratio

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6020, 6030, 6031
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1.000	10000.000	1.000

Description: Sets the ratio between the total moment of inertia (load + motor) and the intrinsic motor moment of inertia (no load).

Dependency: This means that together with p0341, the rated starting time of the motor is calculated.

See also: p0341, r0345, p1498

Note: The product of p0341 * p0342 is used when the speed controller (p0340 = 4) is calculated automatically.

p0343[0...n] Rated motor current identified / Mot I_rated ident

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -

Min:	**Max:**	**Factory setting:**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Displays the identified rated motor current.

p0344[0...n] Motor weight (for the thermal motor model) / Mot weightThermMod

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8018
P group: Motor	**Unit group:** 27_1	**Unit selection:** p0100
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [kg]	50000.0 [kg]	0.0 [kg]

Description: Sets the motor weight.

Dependency: IEC drives (p0100 = 0): unit kg
NEMA drives (p0100 = 1): unit lb

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter influences the thermal 3 mass model of the induction motor.
The parameter is not used for synchronous motors (p0300 = 2xx).

r0345[0...n] Nominal motor starting time / Mot t_start_rated

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [s]	- [s]	- [s]

Description: Displays the rated motor starting time.
This time corresponds to the time from standstill up to reaching the motor rated speed and the acceleration with motor rated torque (r0333).

Dependency: See also: r0313, r0333, r0336, p0341, p0342

p0346[0...n] Motor excitation build-up time / Mot t_excitation

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3

Min:	**Max:**	**Factory setting:**
-20.000 [s]	20.000 [s]	0.000 [s]

Description: Sets the excitation build-up time of the motor.
This involves the delay time between enabling the pulses and enabling the ramp-function generator. The induction motor is magnetized during this time.

Caution: If there is insufficient magnetization under load or if the acceleration rate is too high, then an induction motor can stall (refer to the note). This is especially true for sensorless vector control or U/f control.

Notice: If the parameter is set to 0 s for separately excited synchronous motors (p0300 = 5), then an excitation current setpoint is generated even if the drive is switched off. In the base speed range, this is the no-load excitation current (p0389). In the field-weakening range, the value is reduced with the inverse value of the actual speed. An excitation current setpoint is not generated during de-magnetizing (p0347) and if an encoder fault is detected.

When starting or executing a flying restart for a separately excited synchronous motor without encoder or with incremental encoder, then the voltage induced in the stator by the excitation current pulse is used to determine the rotor position.

The length of the ramp is pre-assigned from the motor data for p0346 = 0 s. If it crystallizes out that this time is too short, then it can be extended by entering a negative value in p0346, whereby otherwise, the excitation behavior corresponds with that for p0346 = 0 s.

For all other motor types, p0346 is internally limited downwards to 0 s.

Note: The parameter is calculated using p0340 = 1, 3.

For induction motors, the result depends on the rotor time constant (r0384). If this time is excessively reduced, this can result in an inadequate magnetizing of the induction motor. This is the case if the current limit is reached while building up magnetizing. For induction motors, the parameter cannot be set to 0 s (internal limit: 0.1 * r0384).

For permanent-magnet synchronous motors and vector control, the value depends on the stator time constant (r0386). Here, it defines the time to establish the current for encoderless operation immediately after the pulses have been enabled.

The current to excite the induction motor can be limited in p0644.

p0347[0...n] Motor de-excitation time / Mot t_de-excitat

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	20.000 [s]	0.000 [s]

Description: Sets the de-magnetizing time (for induction motors) after the inverter pulses have been canceled.

The inverter pulses cannot be switched in (enabled) within this delay time.

Note: The parameter is calculated using p0340 = 1, 3.

For induction motors, the result depends on the rotor time constant (r0384).

if this time is shortened too much, then this can result in an inadequate de-magnetizing of the induction motor and in an overcurrent condition when the pulses are subsequently enabled (only when the flying restart function is activated and the motor is rotating).

p0349 System of units motor equivalent circuit diagram data / Unit_sys mot ESB

VECTOR_G

Can be changed: C2(3)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	2	1

Description: Sets the actual system of units for motor equivalent circuit diagram data.

Value:
1: System of units, physical
2: System of units, referred

Dependency: The parameter can only be changed in an offline project using the commissioning tool.

See also: p0304, p0305, p0310

Note: The reference parameter for resistances of the rated motor impedance Z = p0304 / (1.732 * p0305) is in the % units system.

Inductances are converted into a resistance using the factor 2 * Pi * p0310.

If a reference parameter (p0304, p305, p0310) is zero, then it is not possible to make a changeover to "referred" values (per unit values).

p0350[0...n] Motor stator resistance cold / Mot R_stator cold

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [ohm]	2000.00000 [ohm]	0.00000 [ohm]

Description: Sets the stator resistance of the motor at ambient temperature p0625 (phase value).

Dependency: See also: p0625, r1912

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The motor identification routine determines the stator resistance from the total stator resistance minus the cable resistance (p0352).

p0352[0...n] Cable resistance / R_cable

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [ohm]	120.00000 [ohm]	0.00000 [ohm]

Description: Resistance of the power cable between the Motor Module and motor.

Dependency: See also: p7003

Caution: The cable resistance should be entered prior to motor data identification. If it is used subsequently, the difference by which p0352 was changed must be subtracted from the stator resistance p0350 or motor data identification must be repeated.

Notice: Parallel circuits with one winding system (p7003 = 0):

p0352 includes the feeder cable resistance of an individual Motor Module. The total feeder cable resistance is obtained from p0352 divided by the number of activated Motor Modules (refer to r0395).

Parallel circuits with multi-winding system (p7003 = 1):

p0352 includes the complete feeder cable resistance and is directly added to the stator resistance (refer to r0395).

Note: The parameter influences the temperature adaptation of the stator resistance.

The motor identification sets the cable resistance to 20% of the measured total resistance if p0352 is zero at the time that the measurement is made. If p0352 is not zero, then the value is subtracted from the measured total stator resistance to calculate stator resistance p0350. In this case, p0350 is a minimum of 10% of the measured value.

Exception:

For parallel circuit configurations with one winding system (p07003 = 0), the cable resistance is directly measured. It is important to note that only the component of an individual Motor Module is entered into p0352.

The cable resistance is reset when quick commissioning is exited with p3900 > 0.

p0353[0...n] Motor series inductance / Mot L_series

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [mH]	1000000.000 [mH]	0.000 [mH]

Description: Sets the series inductance.

Note: For the automatic calculation with p0340 = 1, 3 or 4, the calculation of p1715 is influenced by p0353.

The series inductance is reset when quick commissioning is exited with p3900 > 0.

p0354[0...n] Motor rotor resistance cold / damping resistance d axis / Mot R_r cold/R_D d

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
	Not for motor type: PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [ohm]	300.00000 [ohm]	0.00000 [ohm]

Description: Sets the rotor/secondary section resistance of the motor at the ambient temperature p0625.
For separately excited synchronous motors: Sets the damping resistance in the rotor direction (d-axis).
This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor data identification routine (p1910) (not for separately excited synchronous motors).

Dependency: See also: p0625

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

p0355[0...n] Motor damping resistance q axis / Mot R_damp q

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [ohm]	300.00000 [ohm]	0.00000 [ohm]

Description: Sets the damping resistance of the separately excited synchronous motor quadrature to the rotor direction (q axis).
This parameter value is automatically calculated using the motor model (p0340 = 1, 2).

p0356[0...n] Motor stator leakage inductance / Mot L_stator leak

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910).
Induction motor, separately excited synchronous motor: Sets the rotor leakage inductance of the motor.
Synchronous motor: Sets the stator quadrature axis inductance of the motor.

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: If the stator leakage inductance (p0356) for induction motors is changed outside the commissioning phase (p0010 > 0), the magnetizing inductance (p0360) is automatically adapted to the new EMF (r0337). You are then advised to repeat the measurement for the saturation characteristic (p1960).
For permanent-magnet synchronous motors (p0300 = 2), this is the non-saturated value and is, therefore, ideal for a low current.

p0357[0...n] Motor stator inductance d axis / Mot L_stator d

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: Sets the stator direct-axis inductance of the synchronous motor.

This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910).

Note: The parameter is not used for separately excited synchronous motors (p0300 = 5).

For permanent-magnet synchronous motors (p0300 = 2), this is the non-saturated value and is ideal for a low current.

p0358[0...n] Motor rotor leakage inductance / damping inductance d axis / Mot L_r leak / LDd

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: Sets the rotor/secondary section leakage inductance of the motor.

For separately excited synchronous motors: Sets the damping inductance in the rotor direction (d-axis).

This value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately excited synchronous motors).

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

VECTOR:

If the rotor leakage inductance (p0358) for induction motors is changed outside the commissioning phase (p0010 > 0), then the magnetizing inductance (p0360) is automatically adapted to the new EMF (r0337). You are then advised to repeat the measurement for the saturation characteristic (p1960).

p0359[0...n] Motor damping inductance q axis / Mot L_damp q

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: Sets the damping inductance of the separately excited synchronous motor quadrature to the rotor direction (q axis).

This parameter value is automatically calculated using the motor model (p0340 = 1, 2).

p0360[0...n] Motor magnetizing inductance/magn. inductance d axis saturated / Mot Lh/Lh d sat

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [mH]	10000.00000 [mH]	0.00000 [mH]

Description: Sets the magnetizing inductance of the motor.
For separately excited synchronous motors: Sets the saturated magnetizing inductance in the rotor direction (d-axis).
This parameter value is automatically calculated using the motor model (p0340 = 1, 2) or using the motor identification routine (p1910) (not for separately excited synchronous motors).

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

p0361[0...n] Motor magnetizing inductance q axis saturated / Mot L_magn q sat

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [mH]	10000.00000 [mH]	0.00000 [mH]

Description: Sets the saturated magnetizing inductance of the separately excited synchronous motor quadrature to the rotor direction (q axis).
This parameter value is automatically calculated using the motor model (p0340 = 1, 2).

p0362[0...n] Motor saturation characteristic flux 1 / Mot sat flux 1

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6723, 6726
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	10.0 [%]	800.0 [%]	60.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.
This parameter specifies the y coordinate (flux) for the 1st value pair of the characteristic.
Induction motors (ASM) and separately excited synchronous motors (SESM):
The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.
The parameter sets the first motor flux as a [%] referred to the rated motor flux.
Permanent magnet synchronous motors (PMSM):
The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.
The parameter sets the first stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.

Dependency: The following applies for the flux values:
p0362 < p0363 < p0364 < p0365
The following applies for the stator quadrature axis flux values (PMSM):
20 % < p0362 < p0363 < p0364 < p0365
See also: p0366

Notice: For permanent magnet synchronous motors (PMSM):
If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: For induction motors, p0362 = 100 % corresponds to the rated motor flux.
For separately excited synchronous motors p0362 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed).
With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305).
When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0363[0...n] Motor saturation characteristic flux 2 / Mot sat flux 2

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3

	Min:	**Max:**	**Factory setting:**
	10.0 [%]	800.0 [%]	115.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the y coordinate (flux) for the 3rd value pair of the characteristic.

Induction motors (ASM) and separately excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the third motor flux as a [%] referred to the rated motor flux.

Permanent magnet synchronous motors (PMSM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the third stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.

Dependency: The following applies for the flux values:

p0362 < p0363 < p0364 < p0365

The following applies for the stator quadrature axis flux values (PMSM):

20% < p0362 < p0363 < p0364 < p0365

See also: p0368

Notice: For permanent magnet synchronous motors (PMSM):

If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: For induction motors, p0364 = 100 % corresponds to the rated motor flux.

For separately excited synchronous motors p0364 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed).

With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305).

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0365[0...n] Motor saturation characteristic flux 4 / Mot sat flux 4

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3

	Min:	**Max:**	**Factory setting:**
	10.0 [%]	800.0 [%]	125.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the y coordinate (flux) for the 4th value pair of the characteristic.

Induction motors (ASM) and separately excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the fourth motor flux as a [%] referred to the rated motor flux.

Permanent magnet synchronous motors (PMSM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the fourth stator quadrature axis flux as a [%] referred to the product of the unsaturated quadrature inductance (p0356) and the rated motor current.

Dependency: The following applies for the flux values:
p0362 < p0363 < p0364 < p0365
The following applies for the stator quadrature axis flux values (PMSM):
20 % < p0362 < p0363 < p0364 < p0365
See also: p0369

Notice: For permanent magnet synchronous motors (PMSM):
If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: For induction motors, p0365 = 100 % corresponds to the rated motor flux.
For separately excited synchronous motors p0365 = 100% corresponds to an induced terminal voltage with the magnitude of the rated motor voltage (under no-load conditions at the synchronous speed).
With permanent-magnet synchronous motors, p0362 = 100 % corresponds to the product of the unsaturated quadrature inductance (p0356) and the rated motor current (p0305).
When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0366[0...n] Motor saturation characteristic I_mag 1 / Mot sat I_mag 1

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6723, 6726
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
5.0 [%]	800.0 [%]	50.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.
This parameter specifies the x coordinate for the 1st value pair of the characteristic.
Induction motors (ASM) and separately excited synchronous motors (SESM):
The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.
The parameter sets the first magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM).
Permanent magnet synchronous motors (PMSM):
The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.
The parameter sets the first stator quadrature axis current as a [%] referred to the rated motor current (p0305).

Dependency: The following applies for the magnetizing currents:
p0366 < p0367 < p0368 < p0369
The following applies for the stator quadrature axis current values (PMSM):
20 % < p0366 < p0367 < p0368 < p0369
See also: p0362

Notice: For permanent magnet synchronous motors (PMSM), the following applies:
If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0367[0...n] Motor saturation characteristic I_mag 2 / Mot sat I_mag 2

	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	5.0 [%]	800.0 [%]	75.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.
This parameter specifies the x coordinate for the 2nd value pair of the characteristic.
Induction motors (ASM) and separately excited synchronous motors (SESM):
The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.
The parameter sets the second magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM).
Permanent magnet synchronous motors (PMSM):
The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.
The parameter sets the second stator quadrature axis current as a [%] referred to the rated motor current (p0305).

Dependency: The following applies for the magnetizing currents:
p0366 < p0367 < p0368 < p0369
The following applies for the stator quadrature axis current values (PMSM):
20 % < p0366 < p0367 < p0368 < p0369
See also: p0363

Notice: For permanent magnet synchronous motors (PMSM), the following applies:
If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0368[0...n] Motor saturation characteristic I_mag 3 / Mot sat I_mag 3

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6723, 6726
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	5.0 [%]	800.0 [%]	150.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.
This parameter specifies the x coordinate for the 3rd value pair of the characteristic.
Induction motors (ASM) and separately excited synchronous motors (SESM):
The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.
The parameter sets the third magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM).
Permanent magnet synchronous motors (PMSM):
The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.
The parameter sets the third stator quadrature axis current as a [%] referred to the rated motor current (p0305).

Dependency: The following applies for the magnetizing currents:
p0366 < p0367 < p0368 < p0369
The following applies for the stator quadrature axis current values (PMSM):
20 % < p0366 < p0367 < p0368 < p0369
See also: p0364

Notice: For permanent magnet synchronous motors (PMSM), the following applies:
If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0369[0...n] Motor saturation characteristic I_mag 4 / Mot sat I_mag 4

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6723, 6726
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
5.0 [%]	800.0 [%]	210.0 [%]

Description: The saturation characteristic (flux as mapping of current) is defined using 4 points.

This parameter specifies the x coordinate for the 4th value pair of the characteristic.

Induction motors (ASM) and separately excited synchronous motors (SESM):

The saturation characteristic describes the mapping of the magnetizing current onto the motor flux.

The parameter sets the fourth magnetizing current as a [%] referred to the rated magnetizing current r0331 (ASM), which in turn is referred to the no-load excitation current (SESM).

Permanent magnet synchronous motors (PMSM):

The saturation characteristic describes the mapping of the stator quadrature axis current onto the stator quadrature axis flux.

The parameter sets the fourth stator quadrature axis current as a [%] referred to the rated motor current (p0305).

Dependency: The following applies for the magnetizing currents:

p0366 < p0367 < p0368 < p0369

The following applies for the stator quadrature axis current values (PMSM):

20 % < p0366 < p0367 < p0368 < p0369

See also: p0365

Notice: For permanent magnet synchronous motors (PMSM), the following applies:

If the parameters are not set as specified, i.e. not in ascending order and to more than 20 %, the unsaturated quadrature inductance (p0356) is always used for quadrature axis flux calculation purposes.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

r0370[0...n] Motor stator resistance cold / Mot R_stator cold

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the motor stator resistance at an ambient temperature (p0625).

The value does not include the cable resistance.

Dependency: See also: p0625

r0372[0...n] Total power unit cable resistance / PU cable R tot

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the total cable resistance between Motor Module and motor, as well as the internal converter resistance.

Dependency: See also: r0238, p0352

r0373[0...n] Motor rated stator resistance / Mot R_stator rated

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
	Not for motor type: PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ohm]	- [ohm]	- [ohm]

Description: Displays the rated motor stator resistance at rated temperature (total of p0625 and p0627).
Dependency: See also: p0627
Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0374[0...n] Motor rotor resistance cold / damping resistance d axis / Mot R_r cold/R_D d

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
	Not for motor type: PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ohm]	- [ohm]	- [ohm]

Description: Displays the rotor/secondary section resistance of the motor for the ambient temperature p0625.
For separately excited synchronous motors:
Displays the damping resistance in the rotor direction (d-axis).
Dependency: See also: p0625
Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0375[0...n] Motor damping resistance q axis / Mot R_damp q

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ohm]	- [ohm]	- [ohm]

Description: Displays the damping resistance of the separately excited synchronous motor quadrature to the rotor direction (q axis).

r0376[0...n] Rated motor rotor resistance / Mot rated R_rotor

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
	Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ohm]	- [ohm]	- [ohm]

Description: Displays the nominal rotor / secondary section resistance of the motor at the rated temperature.
The rated temperature is the sum of p0625 and p0628.
Dependency: See also: p0628
Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0377[0...n] Motor leakage inductance total / Mot L_leak total

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6640
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [mH]	- [mH]	- [mH]

Description: Displays the total stray inductance of the motor.
Induction motor, separately excited synchronous motor:
Displays the stator leakage inductance of the motor, including the series inductance (p0353) and the motor reactor (p0233).
Synchronous motor:
Displays the stator quadrature inductance, including the series inductance (p0353) and the motor reactor (p0233).

r0378[0...n] Motor stator inductance d axis / Mot L_stator d

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [mH]	- [mH]	- [mH]

Description: Displays the stator longitudinal inductance of the synchronous motor including the series inductance (p0353) and the motor reactor (p0233).

Note: The parameter is not used for separately excited synchronous motors (p0300 = 5).

r0380[0...n] Motor damping inductance d axis / Mot L_damp d

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [mH]	- [mH]	- [mH]

Description: Displays the damping inductance of the separately excited synchronous motor in the rotor direction (d-axis).

r0381[0...n] Motor damping inductance q axis / Mot L_damp q

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 15_1	**Unit selection:** p0349
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [mH]	- [mH]	- [mH]

Description: Displays the damping inductance of a separately excited synchronous motor quadrature to the rotor direction (q axis).

r0382[0...n] Motor magnetizing inductance transformed / Lh d axis saturated / Mot L_m tr/Lhd sat

VECTOR_G

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dyn. index:** MDS, p0130 **Function diagram:** -
P group: Motor **Unit group:** 15_1 **Unit selection:** p0349
Not for motor type: PMSM, REL, RESM **Scaling:** - **Expert list:** 1
Min: **Max:** **Factory setting:**
- [mH] - [mH] - [mH]

Description: Displays the magnetizing inductance of the motor.
For separately excited synchronous motors:
Displays the saturated magnetizing inductance in the rotor direction (d-axis).

Note: The parameter is not used for synchronous motors (p0300 = 2xx).

r0383[0...n] Motor magnetizing inductance q axis saturated / Mot L_magn q sat

VECTOR_G

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dyn. index:** MDS, p0130 **Function diagram:** -
P group: Motor **Unit group:** 15_1 **Unit selection:** p0349
Not for motor type: ASM, PMSM, REL, RESM **Scaling:** - **Expert list:** 1
Min: **Max:** **Factory setting:**
- [mH] - [mH] - [mH]

Description: Displays the saturated magnetizing inductance of a separately excited synchronous motor quadrature to the rotor direction (q axis).

r0384[0...n] Motor rotor time constant / damping time constant d axis / Mot Tc_rotor/T_Dd

VECTOR_G

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dyn. index:** MDS, p0130 **Function diagram:** 6722
P group: Motor **Unit group:** - **Unit selection:** -
Not for motor type: PMSM, REL, RESM **Scaling:** - **Expert list:** 1
Min: **Max:** **Factory setting:**
- [ms] - [ms] - [ms]

Description: Displays the rotor time constant.
For separately excited synchronous motors:
Displays the damping time constant to the rotor direction (d axis).

Note: The parameter is not used for synchronous motors.
The value is calculated from the total of the inductances on the rotor side (p0358, p0360) divided by the rotor/damping resistance (p0354). The temperature adaptation of the rotor resistance for induction motors is not taken into account.

r0385[0...n] Motor damping time constant q axis / Mot L_damping q

VECTOR_G

Can be changed: - **Calculated:** - **Access level:** 4
Data type: FloatingPoint32 **Dyn. index:** MDS, p0130 **Function diagram:** -
P group: Motor **Unit group:** - **Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM **Scaling:** - **Expert list:** 1
Min: **Max:** **Factory setting:**
- [ms] - [ms] - [ms]

Description: Displays the damping time constant of a separately excited synchronous motor quadrature to the rotor direction (q axis).

Note: The value is calculated from the total of the inductances on the damping side (p0359, p0361) divided by the damping resistance (p0355).

r0386[0...n] Motor stator leakage time constant / Mot Tc_stator leak

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ms]	- [ms]	- [ms]

Description: Displays the stator leakage time constant.

Note: The value is calculated from the total of all leakage inductances (p0233*, p0353, p0356, p0358) divided by the total of all motor resistances (p0350, p0352, p0354). The temperature adaptation of the resistances is not taken into account.

* only applies for VECTOR (r0107).

r0387[0...n] Motor stator leakage time constant q axis / Mot Tc_Sleak /T_Sq

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ms]	- [ms]	- [ms]

Description: Displays the stator leakage time constant quadrature to the rotor direction (q axis).

Note: The value is calculated from the total of all leakage inductances (p0233, p0356, p0359) divided by the total of all motor resistances (p0350, p0352, p0355).

The temperature adaptation of the resistances is not taken into account.

p0389[0...n] Excitation rated no-load current / Exc I_noload_rated

VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [A]	10000.00 [A]	0.00 [A]

Description: Sets the rated no-load current (I_F0) for the excitation.

p0390[0...n] Rated excitation current / Exc I_rated

VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [A]	10000.00 [A]	0.00 [A]

Description: Setting the rated current (I_F) of the controlled excitation rectifier (DC master).

p0391[0...n] Current controller adaptation starting point Kp / I_adpt pt Kp

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6714
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]

Description: Sets the starting point of the current-dependent current controller adaptation where the current controller gain p1715 is effective.

Dependency: See also: p0392, p0393, p1402, p1715

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0392[0...n] Current controller adaptation starting point Kp adapted / I_adpt pt Kp adpt

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6714
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Arms]	6000.00 [Arms]	0.00 [Arms]

Description: Sets the starting point of the current-dependent current controller adaptation where the adapted current controller gain p1715 x p0393 is effective.

Dependency: See also: p0391, p0393, p1402, p1715

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0393[0...n] Current controller adaptation P gain scaling / I_adpt Kp scal

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6714
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the factor for the current controller P gain in the adaptation range (e.g. r0078 > p0392, if p0392 > p0391).

The value is referred to p1715.

Dependency: See also: p0391, p0392, p1402, p1715

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: For p0393 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1715 is effective over the entire range.

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

r0395[0...n] Actual stator resistance / R_stator act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6301, 6730, 6731, 6732
P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual stator resistance (phase value).
The parameter value also contains the temperature-independent cable resistance.

Dependency: In the case of induction motors the parameter is also affected by the motor temperature model.
See also: p0350, p0352, p0620

Note: In each case, only the stator resistance of the active Motor Data Set is included with the stator temperature of the thermal motor model.

r0396[0...n] Actual rotor resistance / R_rotor act

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6730
P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the actual rotor/secondary section resistance (phase value).
The parameter is affected by the motor temperature model.

Dependency: See also: p0354, p0620

Note: In each case, only the rotor resistance of the active Motor Data Set is included with the rotor temperature of the thermal motor model.
This parameter is not used for synchronous motors (p0300 = 2xx).

p0397[0...n] Angle magnetic decoupling maximum angle / Magn decpl max_ang

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-90.0 [°]	90.0 [°]	90.0 [°]

Description: Maximum angle when calculating the polynomial function to decouple the magnetic flux axes for permanent-magnet synchronous motors (see p0398, p0399).

p0398[0...n] Angle magn decoupling (cross saturation) coeff 1 / Magn decoupl C1

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-10.000000	10.000000	0.000000

Description: The magnetic cross coupling of the motor's d and q axes caused by saturation (current-dependent) leads to an angle offset affecting the axis system d'q'; this decouples the magnetic quantities.
The angle offset can be described as a 3rd order polynomial function of the load current consumed:
phiOffset = f(C1*iq + C3*iq^3)
This parameter is the coefficient C1; it describes the linear load impact effect.

p0399[0...n] Angle magn decoupling (cross saturation) coeff 3 / Magn decoupl C3

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-10.000000	10.000000	0.000000

Description: The magnetic cross coupling of the motor's d and q axes caused by saturation (current-dependent) leads to an angle offset affecting the axis system d'q'; this decouples the magnetic quantities.

The angle offset can be described as a 3rd order polynomial function of the load current consumed:

phiOffset = f(C1*iq + C3*iq^3)

This parameter is the coefficient C3; it describes the cubic load impact effect.

p0400[0...n] Encoder type selection / Enc_type sel

VECTOR_G	**Can be changed:** C2(1, 4)	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** EDS, p0140	**Function diagram:** 4700, 4704
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	10000	0

Description: Selects the encoder from the list of encoder types supported.

Value:
0: No encoder
3001: 1024 HTL A/B R
3002: 1024 TTL A/B R
3003: 2048 HTL A/B R
3005: 1024 HTL A/B
3006: 1024 TTL A/B
3007: 2048 HTL A/B
3008: 2048 TTL A/B
3009: 1024 HTL A/B unipolar
3011: 2048 HTL A/B unipolar
3020: 2048 TTL A/B R, with sense
9999: User defined
10000: Identify encoder

Notice: An encoder type with p0400 < 9999 defines an encoder for which there is an encoder parameter list.

When selecting a catalog encoder (p0400 < 9999) the parameters from the encoder parameter list cannot be changed (write protection). To remove write protection, the encoder type should be set to a third-party encoder (p0400 = 9999).

Note: The connected encoder can be identified by setting p0400 to 10000 or 10100. This means that the encoder must support this, and is possible in the following cases:

- motor with DRIVE-CLiQ
- encoder with EnDat interface
- DRIVE-CLiQ encoder
- encoder with SSI interface (only 10100)

The encoder data (e.g. pulse number p0408) can only be changed when p0400 = 9999.

When using an encoder with track A/B and zero pulse, as standard, fine synchronization is not set using a zero mark. If, for a synchronous motor, fine synchronization is to be realized using a zero mark, then the following must be executed:

- set p0400 to 9999
- set p0404.15 to 1

Prerequisite:

Coarse synchronization must be selected (e.g. pole position identification) and the zero pulse of the encoder must be either mechanically or electronically (p0431) adjusted to the pole position.

For p0400 = 9010 the following applies:

Further, for encoderless operation, the position actual value (r0482) is supplied from the motor model. This means that encoderless positioning/position control is possible.

For p0400 = 10000 the following applies:

The connected encoder is identified. If an identification is not possible, then p0400 is set to 0.

For p0400 = 10100 the following applies:

The connected encoder is identified. If identification is not possible, then p0400 remains set = 10100, and the system waits until identification is possible.

03	Track A/B square-wave	Yes	No	-
04	Track A/B sine	Yes	No	-
05	Track C/D	Yes	No	-
06	Hall sensor	Yes	No	-
08	EnDat encoder	Yes	No	-
09	SSI encoder	Yes	No	-
10	DRIVE-CLiQ encoder	Yes	No	-
11	Digital encoder	Yes	No	-
12	Equidistant zero mark	Yes	No	-
13	Irregular zero mark	Yes	No	-
14	Distance-coded zero mark	Yes	No	-
15	Commutation with zero mark (not ASM)	Yes	No	-
16	Acceleration	Yes	No	-
17	Track A/B analog	Yes	No	-
20	Voltage level 5 V	Yes	No	-
21	Voltage level 24 V	Yes	No	-
22	Remote sense (only SMC30)	Yes	No	-
23	Resolver excitation	Yes	No	-

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.
If an SSI encoder (bit 9 = 1) is used as motor encoder for permanent-magnet synchronous motors, then this is only permissible in conjunction with an additional A/B track (bit 3 = 1 or bit 4 = 1).

Note: ZM: Zero mark

SMC: Sensor Module Cabinet

If a technique to determine the commutation information/data has not been selected (e.g. track C/D, Hall sensor), and the encoder pulse number is an integer multiple of the pole number, then the following applies:

The track A/B is adjusted to match the magnetic position of the motor.

For bit 01, 02 (absolute encoder, multiturn encoder):

These bits can only be selected for EnDat encoders, SSI encoders or DRIVE-CLiQ encoders.

For bit 10 (DRIVE-CLiQ encoder):

This bit is only used for the large-scale integrated DRIVE-CLiQ encoders that provide their encoder data directly in DRIVE-CLiQ format without converting this data. This bit is not, therefore, set for first-generation DRIVE-CLiQ encoders.

For bit 12 (equidistant zero mark):

The zero marks occur at regular intervals (e.g. rotary encoder with 1 zero mark per revolution or linear encoder with constant zero mark distance).

The bit activates monitoring of the zero mark distance (p0424/p0425, linear/rotary) or in the case of the linear encoder with 1 zero mark and p0424 = 0 zero mark monitoring is activated.

For bit 13 (irregular zero mark):

The zero marks occur at irregular intervals (e.g. a linear scale with only 1 zero mark in the traversing range). The zero mark distance is not monitored.

For bit 14 (distance-coded zero mark):

The distance (clearance) between two or several consecutive zero marks allows the absolute position to be calculated.

For bit 15 (commutation with zero mark):

Only applicable for synchronous motors.

The function can be deselected by priority via p0430.23.

For distance-coded zero marks, the following applies:

The phase sequence of the C/D track (if available) must be the same as the phase sequence of the encoder (A/B track).

The phase sequence of the Hall signal (if available) must be the same as the phase sequence of the motor. Further, the position of the Hall sensor must be mechanically adjusted to the motor EMF.

The fine synchronization is only started after two zero marks have been passed.

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: ZM: Zero mark

SMC: Sensor Module Cabinet

If a technique to determine the commutation information/data has not been selected (e.g. track C/D, Hall sensor), and the encoder pulse number is an integer multiple of the pole number, then the following applies:

The track A/B is adjusted to match the magnetic position of the motor.

For bit 01, 02 (absolute encoder, multiturn encoder):

These bits can only be selected for EnDat encoders, SSI encoders or DRIVE-CLiQ encoders.

For bit 10 (DRIVE-CLiQ encoder):

This bit is only used for the large-scale integrated DRIVE-CLiQ encoders that provide their encoder data directly in DRIVE-CLiQ format without converting this data. This bit is not, therefore, set for first-generation DRIVE-CLiQ encoders.

For bit 12 (equidistant zero mark):

The zero marks occur at regular intervals (e.g. rotary encoder with 1 zero mark per revolution or linear encoder with constant zero mark distance).

The bit activates monitoring of the zero mark distance (p0424/p0425, linear/rotary) or in the case of the linear encoder with 1 zero mark and p0424 = 0 zero mark monitoring is activated.

For bit 13 (irregular zero mark):

The zero marks occur at irregular intervals (e.g. a linear scale with only 1 zero mark in the traversing range). The zero mark distance is not monitored.

For bit 14 (distance-coded zero mark):

The distance (clearance) between two or several consecutive zero marks allows the absolute position to be calculated.

For bit 15 (commutation with zero mark):

Only applicable for synchronous motors.

The function can be deselected by priority via p0430.23.

For distance-coded zero marks, the following applies:

The phase sequence of the C/D track (if available) must be the same as the phase sequence of the encoder (A/B track).

The phase sequence of the Hall signal (if available) must be the same as the phase sequence of the motor. Further, the position of the Hall sensor must be mechanically adjusted to the motor EMF.

The fine synchronization is only started after two zero marks have been passed.

p0405[0...n] Square-wave encoder track A/B / Sq-wave enc A/B

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** 4704
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 1111 bin

Description: Settings for the track A/B in a square-wave encoder.

For square-wave encoders, p0404.3 must also be 1.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Signal	Bipolar	Unipolar	-
01	Level	TTL	HTL	-
02	Track monitoring	A/B <> -A/B	None	-
03	Zero pulse	Same as A/B track	24 V unipolar	-
04	Switching threshold	High	Low	-
05	Pulse/direction	Active	Inactive	-

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For bit 02:
When the function is activated, track monitoring can be deactivated by setting p0437.26.
For bit 05:
When the function is activated, a frequency setpoint and a direction for traveling can be entered via an encoder interface.

p0407[0...n] Linear encoder grid division / Enc grid div

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** 4010, 4704
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [nm]	250000000 [nm]	16000 [nm]

Description: Sets the grid division for a linear encoder.
In conjunction with the values in p0418/p0419, the grid division defines the transfer format for position actual values Gn_XIST1 (r0482) and Gn_XIST2 (r0483).

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: The lowest permissible value is 250 nm.
This value does not always correspond to the grid division of the measuring device. For a DRIVE-CLiQ encoder, a value is entered here that facilitates optimum transfer of the resolution (p0422).

p0408[0...n] Rotary encoder pulse number / Rot enc pulse no

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** 4010, 4704
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	16777215	2048

Description: Sets the number of pulses for a rotary encoder.
In conjunction with the values in p0418/p0419, the pulse number defines the transfer format for position actual values Gn_XIST1 (r0482) and Gn_XIST2 (r0483).

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: The smallest permissible value is 1 pulse.
The number of pole pairs for a resolver is entered here.
This value does not always correspond to the pulse number of the measuring device. For a DRIVE-CLiQ encoder, a value is entered here that facilitates optimum transfer of the resolution (p0423).

p0410[0...n] Encoder inversion actual value / Enc inv ActV

VECTOR_G, ENC

Can be changed: C2(4) | **Calculated:** - | **Access level:** 3

Description: Setting to invert actual values.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Invert speed actual value	Yes	No	4710, 4711, 4715
01	Invert position actual value	Yes	No	4704

Note: The inversion influences the following parameters:
Bit 00: r0061, r0063 (exception: encoderless control), r0094
Bit 01: r0482, r0483

p0410[0...n] Encoder inversion actual value / Enc inv ActV

ENC (Lin_enc)

Can be changed: C2(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dyn. index:** EDS, p0140 | **Function diagram:** 4704, 4710, 4711, 4715
P group: Encoder | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0000 bin

Description: Setting to invert actual values.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Invert velocity actual value	Yes	No	4710, 4711, 4715
01	Invert position actual value	Yes	No	4704

Note: The inversion influences the following parameters:
Bit 00: r0061, r0063 (exception: encoderless control), r0094
Bit 01: r0482, r0483

p0411[0...n] Measuring gear configuration / Meas gear config

VECTOR_G, ENC

Can be changed: C2(4) | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dyn. index:** EDS, p0140 | **Function diagram:** 4704
P group: Encoder | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0000 bin

Description: Sets the configuration for position tracking of a measuring gear.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Measuring gear activate position tracking	Yes	No	-
01	Axis type	Linear axis	Rotary axis	-
02	Measuring gear reset position	Yes	No	-
03	Meas. gearbox, activate pos. tracking for incremental encoders	Yes	No	-

Notice: For p0411.3 = 1 the following applies:
If position tracking is activated for incremental encoders, only the position actual value is stored. Axis or encoder motion is not detected when deactivated! Any tolerance window entered in p0413 has no effect.

Note: For the following events, the non-volatile, saved position values are automatically reset:
- when an encoder replacement has been identified.
- when changing the configuration of the Encoder Data Set (EDS).

p0412[0...n] Measuring gear absolute encoder rotary revolutions virtual / Abs rot rev

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** 4704
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	4194303	0

Description: Sets the number of rotations that can be resolved for a rotary encoder with activated position tracking of the measuring gear.

Dependency: This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking (p0411.0 = 1) and for an incremental encoder with activated position tracking (p0411.3 = 1).

Note: The resolution that is set must be able to be represented using r0483.

For rotary axes/modulo axes, the following applies:

p0411.0 = 1:

This parameter is pre-set with p0421 and can be changed.

p0411.3 = 1:

The parameter value is pre-set to the highest possible value. The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).

For linear axes, the following applies:

p0411.0 = 1:

This parameter is pre-assigned with p0421, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.

p0411.3 = 1:

The parameter value is pre-set to the highest possible value. The highest possible value depends on the pulse number (p0408) and the fine resolution (p0419).

p0413[0...n] Measuring gear position tracking tolerance window / Pos track window

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00	4294967300.00	0.00

Description: Sets a tolerance window for position tracking.

After the system is switched on, the difference between the saved position and the actual position is determined, and depending on this, the following is initiated:

Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value.

Difference outside the tolerance window --> An appropriate message is output.

Dependency: See also: F31501, F32501, F33501

Caution: Rotation, for example through a complete encoder range is not detected.

Note: The value is entered in integer (complete) encoder pulses.

For p0411.0 = 1, the value is automatically pre-assigned quarter of the encoder range.

Example:

Quarter of the encoder range = (p0408 * p0421) / 4

It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

p0414[0...n] Redundant coarse position value relevant bits (identified) / Relevant bits

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	16	16

Description: Sets the number of relevant bits for the redundant coarse position value.

p0415[0...n] Gx_XIST1 Coarse position safe most significant bit (identified) / Gx_XIST1 safe MSB

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	31	14

Description: Sets the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.
Note: MSB: Most Significant Bit

p0416[0...n] Non safety-relevant meas. steps position value POS1 (detected) / nsrPos1

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	4294967295	22000

Description: Sets the non safety-relevant measuring steps of POS1.
Dependency: See also: r0473, p9513

p0417[0...n] Encoder safety comparison algorithm (detected) / Safety comp_algo

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	255	255

Description: Sets the comparison algorithm for the encoder position monitoring functions.
Value:
0: Reserved
10: Reserved
11: DQL linear non-binary safety algorithm
12: SMC30 safety algorithm
255: Safety algorithm unknown
Dependency: See also: p9541

p0418[0...n] Fine resolution Gx_XIST1 (in bits) / Enc fine Gx_XIST1

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** EDS, p0140	**Function diagram:** 4010, 4704
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	18	11

Description: Sets the fine resolution in bits of the incremental position actual values.

Note: The parameter applies for the following process data:
- Gx_XIST1
- Gx_XIST2 for reference mark or flying measurement

The fine resolution specifies the fraction between encoder pulses. Depending on the physical measurement principle, an encoder pulse can be broken down into a different number of fractions (e.g. square-wave encoder: 2 bit = resolution 4, sin/cos encoder: Typical 11 bit = resolution 2048).

For a square-wave encoder, with the factory setting, the least significant bits have the value zero, i.e. they do not supply any useful information.

For especially high quality measuring systems, the fine resolution must be increased corresponding to the available accuracy.

p0419[0...n] Fine resolution absolute value Gx_XIST2 (in bits) / Enc fine Gx_XIST2

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** EDS, p0140	**Function diagram:** 4704, 4710
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	18	9

Description: Sets the fine resolution in bits of the absolute position actual values.

Dependency: See also: p0418

Note: This parameter applies to process data Gx_XIST2 when reading the absolute value.

p0420[0...n] Encoder connection / Enc_connection

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 bin

Description: Selecting the encoder connection.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	SUB-D	Yes	No	-
01	Terminal	Yes	No	-

p0421[0...n] Absolute encoder rotary multiturn resolution / Enc abs multiturn

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** 4704
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	4294967295	4096

Description: Sets the number of rotations that can be resolved for a rotary absolute encoder.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).

When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0422[0...n] Absolute encoder linear measuring step resolution / Enc abs meas step

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** 4704
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [nm]	4294967295 [nm]	100 [nm]

Description: Sets the resolution of the absolute position for a linear absolute encoder.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: The serial protocol of an absolute encoder provides the position with a certain resolution (e.g. 100 nm). This value must be entered here.

p0423[0...n] Absolute encoder rotary singleturn resolution / Enc abs singleturn

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** 4704
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1073741823	8192

Description: Sets the number of measuring steps per revolution for a rotary absolute encoder.
The resolution refers to the absolute position.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0424[0...n] Encoder linear zero mark distance / Enc lin ZM_dist

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [mm]	65535 [mm]	20 [mm]

Description: Sets the distance between two zero marks for a linear encoder.
This information is used for zero mark monitoring.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For distance-coded zero marks this parameter signifies the basic distance.

p0425[0...n] Encoder rotary zero mark distance / Enc rot dist ZM

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** 4704, 8570
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	16777215	2048

Description: Sets the distance in pulses between two zero marks for a rotary encoder.
This information is used for zero mark monitoring.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For distance-coded zero marks this parameter signifies the basic distance.

p0426[0...n] Encoder zero mark differential distance / Enc ZM Dif_dist

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	65535	1

Description: Sets the differential pitch for distance-coded zero marks (signal periods).
The value corresponds to jump displacement of "zero mark with interference".

Dependency: This function can only be used when a Sensor Module property is available (r0459.9 = 1).

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0427[0...n] Encoder SSI baud rate / Enc SSI baud rate

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [kHz]	65535 [kHz]	100 [kHz]

Description: Sets the baud rate for an SSI encoder.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: SSI: Synchronous Serial Interface

p0428[0...n] Encoder SSI monoflop time / Enc SSI t_monoflop

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [µs]	65535 [µs]	30 [µs]

Description: Sets the minimum delay time between two data transfers of the absolute value for an SSI encoder.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0429[0...n] Encoder SSI configuration / Enc SSI config

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 bin

Description: Sets the configuration for an SSI encoder.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Transfer code	Binary code	Gray code	-
02	Transfer absolute value twice	Yes	No	-
06	Data line during the monoflop time	High level	Low level	-

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For bit 06:
The quiescent signal level of the data line corresponds to the inverted, set level.

p0430[0...n] Sensor Module configuration / SM config

VECTOR_G, ENC

Can be changed: C2(4) | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dyn. index:** EDS, p0140 | **Function diagram:** -
P group: Encoder | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: - | **Max:** - | **Factory setting:** 1110 0000 0000 1000 0000 0000 0000 0000 bin

Description: Sets the configuration of the Sensor Module.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
17	Burst oversampling	Yes	No	-
18	Continuous oversampling (reserved)	Yes	No	-
19	Safety position actual value sensing	Yes	No	-
20	Speed calculation mode (only SMC30)	Incremental diff	Flank time meas	-
21	Zero mark tolerance	Yes	No	-
22	Rotor position adaptation	Yes	No	-
23	Deselect commutation with zero mark	Yes	No	-
24	Commutation with selected zero mark	Yes	No	-
25	Switch off encoder voltage supply during parking	Yes	No	-
27	Extrapolate position values	Yes	No	-
28	Cubic correction	Yes	No	-
29	Phase correction	Yes	No	-
30	Amplitude correction	Yes	No	-
31	Offset correction	Yes	No	-

Notice: A bit-wise configuration is only possible if the corresponding property is also present in r0458.

Note:

For bit 17 (burst oversampling):
- if bit = 1, burst oversampling is switched on.

For bit 18 (continuous oversampling):
- if bit = 1, continuous oversampling is switched on.

For bit 19 (Safety position actual value sensing):
- if bit = 1, the Safety position actual value is transferred in the cyclic telegram.

For bit 20 (speed calculation mode):
- if bit = 1, the speed is calculated via incremental difference without extrapolation.
- if bit = 0, the speed is calculated via edge time measurement with extrapolation. p0453 is effective in this mode.

For bit 21 (zero mark tolerance):
- if bit = 1, a one-off zero mark distance error is tolerated. In the event of a defect, the fault F3x100/F3x101 does not appear, but alarm A3x400/A3x401 does.

For bit 22 (rotor position adaptation):
- if bit = 1, the rotor position is corrected automatically. The correction speed is +/-1/4 encoder pulse per zero mark distance.

For bit 23 (deselect commutation with zero mark):
- the bit should only be set for encoders that have not been adjusted.

For bit 24 (commutation with selected zero mark):
- if bit = 1, the commutation position is corrected via a selected zero mark.

For bit 25 (disconnect the encoder power supply on parking):
- if bit = 1, the encoder power supply is switched off on parking (0 V).
- if bit = 0, the encoder power supply is not switched off on parking, it is reduced from 24 V to 5 V.

For bit 27 (extrapolate position values):
- if bit = 1, the extrapolation of the position values is activated.

For bit 28 (cubic correction);
- if bit = 1, the cubic correction for track A/B sine is activated.

For bit 29 (phase correction):
- if bit = 1, the phase correction for track A/B sine is activated.

For bit 30 (amplitude correction):
- if bit = 1, the amplitude correction for track A/B sine is activated.

For bit 31 (offset correction):
- if bit = 1, the offset correction for track A/B sine is activated.

p0430[0...n] Sensor Module configuration / SM config

ENC (Lin_enc)

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1110 0000 0000 1000 0000 0000 0000 0000 bin

Description: Sets the configuration of the Sensor Module.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
17	Burst oversampling	Yes	No	-
18	Continuous oversampling (reserved)	Yes	No	-
19	Safety position actual value sensing	Yes	No	-
20	Velocity calculation mode (only SMC30)	Incremental diff	Flank time meas	-

21	Zero mark tolerance	Yes	No	-
22	Rotor position adaptation	Yes	No	-
23	Deselect commutation with zero mark	Yes	No	-
24	Commutation with selected zero mark	Yes	No	-
25	Switch off encoder voltage supply during parking	Yes	No	-
27	Extrapolate position values	Yes	No	-
28	Cubic correction	Yes	No	-
29	Phase correction	Yes	No	-
30	Amplitude correction	Yes	No	-
31	Offset correction	Yes	No	-

Notice: A bit-wise configuration is only possible if the corresponding property is also present in r0458.

Note: For bit 17 (burst oversampling):

- if bit = 1, burst oversampling is switched on.

For bit 18 (continuous oversampling):

- if bit = 1, continuous oversampling is switched on.

For bit 19 (Safety position actual value sensing):

- if bit = 1, the Safety position actual value is transferred in the cyclic telegram.

For bit 20 (speed calculation mode):

- if bit = 1, the speed is calculated via incremental difference without extrapolation.
- if bit = 0, the speed is calculated via edge time measurement with extrapolation. p0453 is effective in this mode.

For bit 21 (zero mark tolerance):

- if bit = 1, a one-off zero mark distance error is tolerated. In the event of a defect, the fault F3x100/F3x101 does not appear, but alarm A3x400/A3x401 does.

For bit 22 (rotor position adaptation):

- if bit = 1, the rotor position is corrected automatically. The correction speed is +/-1/4 encoder pulse per zero mark distance.

For bit 23 (deselect commutation with zero mark):

- the bit should only be set for encoders that have not been adjusted.

For bit 24 (commutation with selected zero mark):

- if bit = 1, the commutation position is corrected via a selected zero mark.

For bit 25 (disconnect the encoder power supply on parking):

- if bit = 1, the encoder power supply is switched off on parking (0 V).
- if bit = 0, the encoder power supply is not switched off on parking, it is reduced from 24 V to 5 V.

For bit 27 (extrapolate position values):

- if bit = 1, the extrapolation of the position values is activated.

For bit 28 (cubic correction);

- if bit = 1, the cubic correction for track A/B sine is activated.

For bit 29 (phase correction):

- if bit = 1, the phase correction for track A/B sine is activated.

For bit 30 (amplitude correction):

- if bit = 1, the amplitude correction for track A/B sine is activated.

For bit 31 (offset correction):

- if bit = 1, the offset correction for track A/B sine is activated.

p0431[0...n] Angular commutation offset / Ang_com offset

VECTOR_G

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-180.00 [°]	180.00 [°]	0.00 [°]

Description: Sets the angular commutation offset.

Dependency: The value is taken into account in r0094.

See also: r0094, r1778

Notice: When the firmware is upgraded from V2.3 to V2.4 or higher, the value must be reduced by 60° if all the following conditions are fulfilled:
- the motor is a synchronous motor (p0300 = 2, 2xx, 4, 4xx).
- the encoder is a resolver (p0404.23 = 1).
- the actual speed value is inverted (p0410.0 = 1).

The angular commutation offset cannot be generally taken from other drive systems. As a minimum - the sign of the offset determined for SIMODRIVE 611 digital and SIMODRIVE 611 universal must be reversed for SINAMICS (p0431 (SINAMICS) = -p1016 (SIMODRIVE)).

Note: Angular commutation offset, angular difference between electrical position of encoder and flux position.
For p0404.5 = 1 (track C/D) the following applies:
The angular offset in p0431 acts on track A/B, the zero mark on track C/D.
For p0404.6 = 1 (Hall sensor) the following applies:
The angular offset in p0431 acts on track A/B and the zero mark.

p0432[0...n] Gearbox factor encoder revolutions / Grbx_fact enc_rev

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	1048576	1

Description: Sets the encoder revolutions for the gearbox factor of the encoder evaluation.
The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.

Dependency: This parameter can only be set for p0402 = 9999.
See also: p0402, p0410, p0433

Note: Negative gearbox factors should be implemented with p0410.
For synchronous motors, the quotient of the pole pair number divided by the ratio of the measuring gear must be an integer number: (p0314 * p0433) / p0432

p0433[0...n] Gearbox factor motor/load revolutions / Grbx_fact mot/load

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	1048576	1

Description: Sets the motor and load revolutions for the gearbox factor of the encoder evaluation.
The gearbox factor specifies the ratio between the encoder shaft and motor shaft (for motor encoders) or between the encoder shaft and the load.

Dependency: This parameter can only be set for p0402 = 9999.
See also: p0402, p0410, p0432

Note: Negative gearbox factors should be implemented with p0410.
For synchronous motors, the quotient of the pole pair number divided by the ratio of the measuring gear must be an integer number:
(p0314 * p0433) / p0432

p0434[0...n] Encoder SSI error bit / Enc SSI error bit

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: Sets the position and level of the error bit in the SSI protocol.

Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.

Note: Value = dcba
ba: Position of the error bit in the protocol (0 ... 63).
c: Level (0: Low level, 1: High level).
d: Status of the evaluation (0: Off, 1: On with 1 error bit, 2: On with 2 error bits ... 9: On with 9 error bits).
For several error bits, the following applies:
- the position specified under ba and the additional bits are assigned increasing consecutively.
- the level set under c applies to all error bits.
Example:
p0434 = 1013
--> The evaluation is switched in and the error bit is at position 13 with a low level.
p0434 = 1113
--> The evaluation is switched in and the error bit is at position 13 with a high level.

p0435[0...n] Encoder SSI alarm bit / Enc SSI alarm bit

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: Sets the position and level of the alarm bit in the SSI protocol.

Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.

Note: Value = dcba
ba: Position of the alarm bit in protocol (0 ... 63).
c: Level (0: Low level, 1: High level).
d: Status of the evaluation (0: Off, 1: On with 1 alarm bit, 2: On with 2 alarm bits ... 9: On with 9 alarm bits).
The following applies for several alarm bits:
- the position specified under ba and the additional bits are assigned increasing consecutively.
- the level set under c applies to all error bits.
Example:
p0435 = 1014
--> The evaluation is switched in and the alarm bit is at position 14 with a low level.
p0435 = 1114
--> The evaluation is switched in and the alarm bit is at position 14 with a high level.

p0436[0...n] Encoder SSI parity bit / Enc SSI parity bit

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: Sets the position and parity of the parity bit in the SSI protocol.

Notice: The bit may only be positioned before (p0446) or after (p0448) the absolute value in the SSI protocol.

Note: Value = dcba
ba: Position of the parity bit in the protocol (0 ... 63).
c: Parity (0: even, 1: uneven).
d: State of the evaluation (0: Off, 1: On).
Example:
p0436 = 1015
--> The evaluation is switched in and the parity bit is at position 15 with even parity.
p0436 = 1115
--> The evaluation is switched in and the parity bit is at position 15 with uneven parity.

p0437[0...n] Sensor Module configuration extended / SM config ext

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0011 0000 0000 0000 0000 1000 0000 0000 bin

Description: Sets the extended configuration of the Sensor Module.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Data logger	Yes	No	-
01	Zero mark edge detection	Yes	No	-
02	Correction position actual value XIST1	Yes	No	-
04	Edge evaluation bit 0	Yes	No	-
05	Edge evaluation bit 1	Yes	No	-
06	Freeze the speed actual value for dn/dt errors	Yes	No	-
07	Do not accumulate the number of incorrect pulses	Yes	No	-
11	Fault handling after PROFIdrive	Yes	No	-
12	Activate additional messages	Yes	No	-
13	Support absolute position for incremental encoder	Yes	No	4750
22	Resolution absolute position as factor	Yes	No	-
25	Deselect monitoring multiturn representation in Gx_XIST2	Yes	No	-
26	Deselect track monitoring	Yes	No	-
28	EnDat linear encoder monitoring incremental/absolute	Yes	No	-
29	EnDat encoder initialization with high accuracy	Yes	No	-
31	Analog unipolar track monitoring	Yes	No	-

Dependency: See also: p0430, r0459

Note:

A value of zero is displayed if an encoder is not present.

For bit 00:

When the data logger (trace) is activated, in the case of a fault, data before and after the event are recorded (traced) and saved in files on the non-volatile memory medium. Experts can then evaluate this data.

For bit 01:

If bit = 0, the zero mark is evaluated by ANDing tracks A and B and the zero mark.

For bit = 1, the zero mark is evaluated depending on the direction of rotation detected. For a positive direction of rotation, the positive edge of the zero mark is considered and for a negative direction of rotation, the negative edge of the zero mark.

For bit 02:

When the bit is set, for a deviation less than the tolerance window for the zero mark (p4681, p4682), the pulse number is corrected. If the bit is not set, encoder fault F3x131 is triggered.

For bits 05, 04:

The actual hardware only supports 1x or 4x signal evaluation.

Bit 5/4 = 0/0: Signal evaluation per period, 4x.

Bit 5/4 = 1/0: signal evaluation per period, 4x with speed calculation over the complete pulse.

Bit 5/4 = 0/1: Signal evaluation per period, 1x.

Bit 5/4 = 1/1: Illegal setting.

For bit 06:

If the function is active, when dn/dt monitoring responds, the speed actual value is internally frozen for a time equivalent to two current controller sampling times. The rotor position continues to be integrated. The actual value is then re-enabled after this time has expired.

For bit 07:

When the bit is not set, the incorrect pulses that have occurred up until now are accumulated in p4688.

When the bit is not set, p4688 indicates the incorrect pulses that have still not been corrected.

For bit 11:

If the bit is set, the Sensor Module checks within a certain time grid whether the fault cause is still present. This enables the Sensor Module to switch from the fault state to the operating state and provide valid actual values automatically. The faults are displayed until the user acknowledges them.

For bit 12:

Additional fault messages can be activated for extended fault diagnostics.

For bit 13:

When the bit is set, for an incremental encoder with zero mark, the absolute value in Gn_XIST2 can be requested via Gn_STW.13. The absolute value is only valid after passing the zero mark.

For bit 22:

When the bit is set, the resolution of the absolute position in the serial protocol is set using distribution factor in p4630. The resolution for the absolute position is then calculated using p0407/p4630.

For bit 26:

Track monitoring is deactivated for the square-wave encoders when the bit is set, even if the monitoring function is selected in p0405.2.

For bit 28:

Monitoring of the difference between incremental and absolute position in the case of linear encoders.

For bit 29:

When the bit is set, the EnDat encoder is initialized under a certain speed and, therefore, with high accuracy. If initialization at a higher speed is requested, fault F31151, F32151, or F33151 is output.

For bit 31:

When monitoring is active, the levels of the individual track signals and the corresponding inverted track signals are monitored separately.

p0437[0...n] Sensor Module configuration extended / SM config ext

ENC (Lin_enc)

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -

31	Analog unipolar track monitoring	Yes	No	-

Dependency: See also: p0430, r0459

Note: A value of zero is displayed if an encoder is not present.

For bit 00:

When the data logger (trace) is activated, in the case of a fault, data before and after the event are recorded (traced) and saved in files on the non-volatile memory medium. Experts can then evaluate this data.

For bit 01:

If bit = 0, the zero mark is evaluated by ANDing tracks A and B and the zero mark.

For bit = 1, the zero mark is evaluated depending on the direction detected. For a positive direction, the positive edge of the zero mark is considered and for a negative direction, the negative edge of the zero mark.

For bit 02:

When the bit is set, for a deviation less than the tolerance window for the zero mark (p4681, p4682), the pulse number is corrected. If the bit is not set, encoder fault F3x131 is triggered.

For bits 05, 04:

Bit 5/4 = 0/0: Signal evaluation per period, 4x.

Bit 5/4 = 1/0: Signal evaluation per period, 4x.

Bit 5/4 = 0/1: Signal evaluation per period, 1x.

Bit 5/4 = 1/1: Illegal setting.

For bit 06:

If the function is active, when dn/dt monitoring responds, the velocity actual value is internally frozen for a time equivalent to two current controller sampling times. The rotor position continues to be integrated. The actual value is then re-enabled after this time has expired.

For bit 07:

When the bit is not set, the incorrect pulses that have occurred up until now are accumulated in p4688.

When the bit is not set, p4688 indicates the incorrect pulses that have still not been corrected.

For bit 29:

When the bit is set, the EnDat encoder is initialized under a certain velocity and, therefore, with high accuracy. If initialization at a higher velocity is requested, fault F31151, F32151, or F33151 is output.

For bit 31:

When monitoring is active, the levels of the individual track signals and the corresponding inverted track signals are monitored separately.

p0438[0...n] Square-wave encoder filter time / Enc t_filt

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [µs]	100.00 [µs]	0.64 [µs]

Description: Sets the filter time for a square-wave encoder.

The hardware of the square-wave encoder only supports the following values:

0: No filtering

0.04 µs

0.64 µs

2.56 µs

10.24 µs

20.48 µs

Dependency: See also: r0452

Notice: If the filter time is too long, the track signals A/B/R may be suppressed and the appropriate messages output.

Note: The most suitable filter time depends on the number of pulses and maximum speed of the square-wave encoder.

The filter time is automatically corrected to the next value when entering a non-specified value. In this case, no message is output.

The effective filter time is displayed in r0452.

p0439[0...n] Encoder ramp-up time / Enc ramp-up time

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	65535 [ms]	0 [ms]

Description: Sets the ramp-up time for the encoder.
The encoder supplies stable track signals once this time has elapsed.

Dependency: This function can only be used when a Sensor Module property is available (r0459.9 = 1).

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).

p0440[0...n] Copy encoder serial number / Copy enc ser_no

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Copies the actual serial number of the encoder belonging to this Encoder Data Set (EDS) to p0441 ... p0445.
Example:
For p0440[0] = 1, the serial number of the encoder belonging EDS0 is copied to p0441[0] ... p0445[0].

Value:
0: No action
1: Transfer serial number

Dependency: See also: p0441, p0442, p0443, p0444, p0445, r0460, r0461, r0462, r0463, r0464, p1990

Note: For encoders with serial number, encoder replacement is monitored in order to request angular commutation calibration (adjustment) for motor encoders and absolute calibration for direct measuring systems with absolute value data. The serial number, which from then onwards is used for monitoring purposes, can be transferred using p0440.
Copying is automatically started in the following cases:
1.) When commissioning 1FT6, 1FK6, 1FK7 motors.
2.) When writing into p0431.
3.) For p1990 = 1.
p0440 is automatically set to 0 when the copying has been completed.
In order to permanently accept the copied values, it is necessary to save in a non-volatile fashion (p0977).

p0441[0...n] Encoder commissioning serial number part 1 / Enc com ser_no 1

P group: Encoder **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1
Min: **Max:** **Factory setting:**
0000 hex FFFF FFFF hex 0000 hex

Description: Serial number part 5 of the encoder for the commissioning.
Dependency: See also: p0440, p0441, p0442, p0443, p0444, r0460, r0461, r0462, r0463, r0464
Note: A value of zero is displayed if an encoder is not present.

p0446[0...n] Encoder SSI number of bits before the absolute value / Enc SSI bit before

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: Sets the number of bits before the absolute value in the SSI protocol.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For example, error bit, alarm bit or parity bit can be positioned at these bits.

p0447[0...n] Encoder SSI number of bits absolute value / Enc SSI bit val

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	25

Description: Sets the number of bits for the absolute value in the SSI protocol.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

p0448[0...n] Encoder SSI number of bits after the absolute value / Enc SSI bit after

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: Sets the number of bits after the absolute value in the SSI protocol.

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: For example, error bit, alarm bit or parity bit can be positioned at these bits.

p0449[0...n] Encoder SSI number of bits filler bits / Enc SSI fill bits

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	1

Description: Sets the number of filler bits for double absolute value transfer in the SSI protocol.

Dependency: See also: p0429

Notice: This parameter is automatically preassigned for encoders from the encoder list and for identify encoder (p0400).
When selecting a catalog encoder, this parameter cannot be changed (write protection). Information in p0400 should be carefully observed when removing write protection.

Note: This parameter is only of significance for p0429.2 = 1.

r0451[0...2] Commutation angle factor / Enc commut_factor

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 4710

	Min:	**Max:**	**Factory setting:**
	- [µs]	- [µs]	- [µs]

Description: Displays the effective filter time for a square-wave encoder.
The filter time is set using p0438.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: See also: p0438

Note: A value of zero is displayed if an encoder is not present.

r0452 Square-wave encoder filter time display / Enc t_filt disp

ENC	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [µs]	- [µs]	- [µs]

Description: Displays the effective filter time for a square-wave encoder.
The filter time is set using p0438.

Dependency: See also: p0438

Note: A value of zero is displayed if an encoder is not present.

p0453[0...n] Pulse encoder evaluation zero speed measuring time / Enc_ev n_0 t_meas

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.10 [ms]	10000.00 [ms]	1000.00 [ms]

Description: Sets the measuring time for evaluating zero speed.
If no pulses are detected from track A/B during this time, a speed actual value of zero is output.

Dependency: See also: r0452

Note: This function is required for slow-running motors so that actual speeds close to zero can be output correctly.

p0454[0...n] Sensor Module configuration extended Part 2 / SM config ext 2

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 bin

Description: Sets the extended configuration Part 2 of the Sensor Module.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
04	Extended cyclic DRIVE-CLiQ telegram	Yes	No	-

Dependency: See also: r0457

Note: For bit 04:
The extended cyclic DRIVE-CLiQ telegram of the encoder should be used.
A power on is required after changing this setting.

r0455[0...2] Encoder configuration recognized / Enc_config recog

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the detected encoder configuration.
In this case, the encoder must automatically support the function (e.g. encoder with EnDat interface).

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Linear encoder	Yes	No	-
01	Absolute encoder	Yes	No	-
02	Multiturn encoder	Yes	No	-
03	Track A/B square-wave	Yes	No	-
04	Track A/B sine	Yes	No	-
05	Track C/D	Yes	No	-
06	Hall sensor	Yes	No	-
08	EnDat encoder	Yes	No	-
09	SSI encoder	Yes	No	-
10	DRIVE-CLiQ encoder	Yes	No	-
11	Digital encoder	Yes	No	-
12	Equidistant zero mark	Yes	No	-
13	Irregular zero mark	Yes	No	-
14	Distance-coded zero mark	Yes	No	-
15	Commutation with zero mark (not ASM)	Yes	No	-
16	Acceleration	Yes	No	-
17	Track A/B analog	Yes	No	-
20	Voltage level 5 V	Yes	No	-
21	Voltage level 24 V	Yes	No	-
22	Remote sense (only SMC30)	Yes	No	-
23	Resolver excitation	Yes	No	-

Dependency: See also: p0404

Note: ZM: Zero mark
This parameter is only used for diagnostics.
A value of zero is displayed if an encoder is not present.
For bit 20, 21 (voltage level 5 V, voltage level 24 V):
The voltage level cannot be detected. Therefore, these bits are always set to 0.

r0455 Encoder configuration recognized / Enc_config recog

ENC

Can be changed: - **Calculated:** - **Access level:** 3
Data type: Unsigned32 **Dyn. index:** - **Function diagram:** -
P group: Encoder **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1
Min: **Max:** **Factory setting:**
- - -

Description: Displays the detected encoder configuration.
In this case, the encoder must automatically support the function (e.g. encoder with EnDat interface).

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Linear encoder	Yes	No	-
01	Absolute encoder	Yes	No	-
02	Multiturn encoder	Yes	No	-

17	Track A/B analog	Yes	No	-
20	Voltage level 5 V	Yes	No	-
21	Voltage level 24 V	Yes	No	-
22	Remote sense (only SMC30)	Yes	No	-
23	Resolver excitation	Yes	No	-

Dependency: See also: p0404
Note: ZM: Zero mark
This parameter is only used for diagnostics.
A value of zero is displayed if an encoder is not present.
For bit 20, 21 (voltage level 5 V, voltage level 24 V):
The voltage level cannot be detected. Therefore, these bits are always set to 0.

Description: Displays the non safety-relevant measuring steps of POS1.

Dependency: See also: p0416, p9513

r0474[0...2] Redundant coarse position value configuration / Red pos config

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the encoder configuration for the redundant coarse position value.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Incrementer	Yes	No	-
01	Encoder CRC least significant byte first	Yes	No	-
02	Redundant coarse position val. most significant bit left-aligned	Yes	No	-
04	Binary comparison not possible	Yes	No	-
05	Single-channel encoder	Yes	No	-

Dependency: See also: p9315, p9515

r0474 Redundant coarse position value configuration / Red pos config

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the encoder configuration for the redundant coarse position value.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Incrementer	Yes	No	-
01	Encoder CRC least significant byte first	Yes	No	-
02	Redundant coarse position val. most significant bit left-aligned	Yes	No	-
04	Binary comparison not possible	Yes	No	-
05	Single-channel encoder	Yes	No	-

Dependency: See also: p9315, p9515

r0475[0...2] Gx_XIST1 coarse position safety most significant bit / Gx_XIST1 safe MSB

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Note: MSB: Most Significant Bit

r0475 Gx_XIST1 coarse position safety most significant bit / Gx_XIST1 safe MSB

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the bit number for the safe most significant bit (MSB) of the Gx_XIST1 coarse position.

Note: MSB: Most Significant Bit

r0477[0...2] CO: Measuring gear position difference / Meas gear pos diff

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the position difference before the measuring gear between switching off and switching on.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: See also: F31501, F32501, F33501

Note: The increments are displayed in the format the same as r0483. The position difference should be read in encoder increments.

r0477 CO: Measuring gear position difference / Meas gear pos diff

ENC

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Integer32	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the position difference before the measuring gear between switching off and switching on.

Dependency: See also: F31501, F32501, F33501

Note: The increments are displayed in the format the same as r0483. The position difference should be read in encoder increments.

r0479[0...2] CO: Diagnostics encoder position actual value Gn_XIST1 / Diag Gn_XIST1

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Function diagram:** 4704
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and connector output for the encoder actual position value Gn_XIST1 according to PROFIdrive for diagnostics.

In contrast to r0482, the value is updated in each DRIVE-CLiQ basic clock cycle and displayed with sign.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Caution:

Following ramping-up or after a data set changeover, the new value is present at connector inputs which are interconnected to connector output r0479 and under certain circumstances take 100 ms to become available.

Reason:

These interconnections are updated in the background, unlike interconnections involving other connector outputs (e.g. CO: r0482).

The value is immediately available when non-cyclically reading r0479 (e.g. via the expert list).

r0479 CO: Diagnostics encoder position actual value Gn_XIST1 / Diag Gn_XIST1

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Function diagram:** 4704
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and connector output for the encoder actual position value Gn_XIST1 according to PROFIdrive for diagnostics.

In contrast to r0482, the value is updated in each DRIVE-CLiQ basic clock cycle and displayed with sign.

Caution:

Following ramping-up or after a data set changeover, the new value is present at connector inputs which are interconnected to connector output r0479 and under certain circumstances take 100 ms to become available.

Reason:

These interconnections are updated in the background, unlike interconnections involving other connector outputs (e.g. CO: r0482).

The value is immediately available when non-cyclically reading r0479 (e.g. via the expert list).

p0480[0...2] CI: Encoder control word Gn_STW signal source / Enc Gn_STW s_s

VECTOR_G

Can be changed: T | **Calculated:** - | **Access level:** 3

Data type: Unsigned32 / Integer16 | **Dyn. index:** - | **Function diagram:** 4700, 4720, 4750

P group: Encoder | **Unit group:** - | **Unit selection:** -

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	0

Description: Sets the signal source for the encoder control word Gn_STW according to PROFIdrive.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established:
CI: p0480[0] = r2520[0], CI: p0480[1] = r2520[1] and CI: p0480[2] = r2520[2]

p0480 CI: Encoder control word Gn_STW signal source / Enc Gn_STW s_s

ENC

Can be changed: T | **Calculated:** - | **Access level:** 3

Data type: Unsigned32 / Integer16 | **Dyn. index:** - | **Function diagram:** 4700, 4720, 4750

P group: Encoder | **Unit group:** - | **Unit selection:** -

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	0

Description: Sets the signal source for the encoder control word Gn_STW according to PROFIdrive.

Note: When the function module "basic positioner" (r0108.4 = 1) is activated, the following BICO interconnection is established:
CI: p0480[0] = r2520[0], CI: p0480[1] = r2520[1] and CI: p0480[2] = r2520[2]

r0481[0...2] CO: Encoder status word Gn_ZSW / Enc Gn_ZSW

VECTOR_G

Can be changed: - | **Calculated:** - | **Access level:** 3

Data type: Unsigned16 | **Dyn. index:** - | **Function diagram:** 4010, 4704, 4730, 4750

P group: Encoder | **Unit group:** - | **Unit selection:** -

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	-

Description: Displays the encoder status word Gn_ZSW according to PROFIdrive.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Function 1 active	Yes	No	-
01	Function 2 active	Yes	No	-
02	Function 3 active	Yes	No	-
03	Function 4 active	Yes	No	-
04	Value 1	Displayed in r0483	Not present	-
05	Value 2	Displayed in r0483	Not present	-
06	Value 3	Displayed in r0483	Not present	-
07	Value 4	Displayed in r0483	Not present	-
08	Measuring probe 1 deflected	Yes	No	-
09	Measuring probe 2 deflected	Yes	No	-
11	Encoder fault acknowledge active	Yes	No	9676
13	Absolute value cyclically	Displayed in r0483	No	-
14	Parking encoder active	Yes	No	-
15	Encoder fault	Displayed in r0483	None	-

Notice: Information on Gn_STW/Gn_ZSW can, e.g. be found in the following literature:
SINAMICS S120 Function Manual Drive Functions

Note: For bit 14:
Displays the acknowledgment for "activate parking encoder" (Gn_STW.14 = 1) or encoder position actual value (Gn_XIST1) invalid.
For bit 14, 15:
r0481.14 = 1 and r0481.15 = 0 can have one of the following causes:
- the encoder is parked.
- the encoder is deactivated.
- the encoder is being commissioned.
- no parameterized encoder available.
- encoder data set is being changed over.

r0481.14 = 1 and r0481.15 = 1 has the following significance:
An encoder error has occurred and the encoder position actual value (Gn_XIST1) is invalid.

r0481 CO: Encoder status word Gn_ZSW / Enc Gn_ZSW

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3

08	Measuring probe 1 deflected	Yes	No	-
09	Measuring probe 2 deflected	Yes	No	-
11	Encoder fault acknowledge active	Yes	No	9676
13	Absolute value cyclically	Displayed in r0483	No	-
14	Parking encoder active	Yes	No	-
15	Encoder fault	Displayed in r0483	None	-

Notice: Information on Gn_STW/Gn_ZSW can, e.g. be found in the following literature:
SINAMICS S120 Function Manual Drive Functions

Note: For bit 14:
Displays the acknowledgment for "activate parking encoder" (Gn_STW.14 = 1) or encoder position actual value (Gn_XIST1) invalid.
For bit 14, 15:
r0481.14 = 1 and r0481.15 = 0 can have one of the following causes:
- the encoder is parked.
- the encoder is deactivated.
- the encoder is being commissioned.
- no parameterized encoder available.
- encoder data set is being changed over.

r0481.14 = 1 and r0481.15 = 1 has the following significance:
An encoder error has occurred and the encoder position actual value (Gn_XIST1) is invalid.

r0482[0...2] CO: Encoder actual position value Gn_XIST1 / Enc Gn_XIST1

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 4700, 4702, 4704, 4735, 4740, 4750
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and connector output for the encoder actual position value Gn_XIST1 according to PROFIdrive.

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Note:
- this value is reset if necessary when the "parking encoder" (r0481.14) function is deselected.
- in this value, the measuring gear (p0432, p0433) is only taken into account when the position tracking is activated (p0411.0 = 1).
- the update time for the position control (EPOS) corresponds to the position controller clock cycle (p0115[4]).
- the update time in isochronous operation corresponds to the bus cycle time r2064[1].
- the update time in isochronous operation and with position control (EPOS) corresponds to the position controller sampling time (p0115[4]).
- the update time in non-isochronous operation or without position control (EPOS) must be determined from the default bus cycle time and the minimum cycle time:

The default bus cycle time is the lowest common multiple (LCM) of all current controller sampling times (p0115[0]) in the drive group (infeed + drives).

The minimum cycle time is four times the maximum of all current controller sampling times (p0115[0]) in the drive group (infeed + drives).

If the minimum cycle time is greater than the default bus cycle time, then the update time corresponds to the minimum cycle time; otherwise, the update time corresponds to the default bus cycle time.

The minimum update time is 1 ms.

Example 1: infeed, servo

Default bus cycle time = KGV(250 µs, 125 µs) = 250 µs

Minimum cycle time = 4 * MAX(250 µs, 125 µs) = 4 * 250 µs = 1 ms

-> update time = 1 ms

Example 2: infeed, servo, vector

Default bus cycle time = KGV(250 µs, 125 µs, 400 µs) = 2 ms

Minimum cycle time = 4 * MAX(250 µs, 125 µs, 400 µs) = 4 * 400 µs = 1.6 ms

-> update time = 2 ms

r0482 CO: Encoder actual position value Gn_XIST1 / Enc Gn_XIST1

ENC

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 4704, 4735, 4740, 4750

p0488[0...2] Measuring probe 1 input terminal / Meas probe 1 inp

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 3

Data type: Integer16 | **Dyn. index:** - | **Function diagram:** 4740

P group: Encoder | **Unit group:** - | **Unit selection:** -

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	8	0

Description: Sets the input terminal to connect probe 1.

Value:
0: No measuring probe
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: See also: p0489, p0728

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice:
Regarding the terminal designation:
The first designation is valid for CU320-2, the second for CU310-2.
To select the values:
For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note:
DI/DO: Bidirectional Digital Input/Output
The terminal must be set as input (p0728).
Refer to the encoder interface for PROFIdrive.
If parameterization is rejected, check whether the terminal is already being used in p0580, p0680, p2517 or p2518.

p0491 Motor encoder fault response ENCODER / Fault resp ENCODER

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	6	0

Description: Sets the behavior for the ENCODER fault response (motor encoder).
This means, for example, if an encoder fault occurs, encoderless operation can be automatically selected with a shutdown behavior that can be selected.

Value:
0: Encoder fault results in OFF2
1: Enc fault results in encoderless oper. and oper. continues
2: Encoder fault results in encoderless operation and OFF1
3: Encoder fault results in encoderless operation and OFF3
4: Encoder fault results in an armature short-cct int/DC braking
5: Enc fault results in encoderless op, operation continues, alarm
6: An encoder fault results in encoderless operation, alarm

Dependency: The following parameters are relevant for encoderless operation.
See also: p0341, p0342, p1470, p1472, p1517, p1612, p1755
See also: F07575

Caution: For a value = 1, 2, 3, 5, 6 the following applies:
- encoderless operation must have been started.
For a value = 1, 5, 6, the following applies:
- the motor continues to operate in spite of the incorrect motor encoder function.

Note: For a value = 1, 2, 3, 5, 6 the following applies:

- Refer to the status signal "encoderless operation due to a fault" (BO: r1407.13).
- if, with r1407.13 = 1, a different drive data set is selected (e.g. interconnection from p0820), then the open-loop/closed-loop control mode p1300 of this data set must match that of the original data set (e.g. p1300 = 21). Encoderless closed-loop controlled operation is kept when changing over.

For a value = 4, the following applies:

- the value can only be set for all motor data sets when p1231 = 3, 4.
- for permanent magnet synchronous motors, an armature short circuit is initiated when an encoder fault occurs.
- For induction motors, DC braking is initiated on an encoder fault. DC braking must be commissioned (p1232, p1233, p1234).

For a value = 5, the following applies:

Same function as for value = 1.

However, in operation, encoder malfunctions that occur are only output as alarm and the message bit "Fault active" (r2139.3) is not set. Fault F07575 is set after the drive axis has been shut down.

The active malfunction of the encoder must be acknowledged via the encoder interface before the system can be switched on again.

For a value = 6, the following applies:

Same function as for value = 1.

Encoder malfunctions that occur are only output as alarm and the message bit "Fault active" (r2139.3) is not set. After shutting down the drive axis, in spite of an active encoder malfunction, the drive can restart without switching over to encoderless operation (except if an active topology error is involved).

The active encoder malfunction must be acknowledged via the encoder interface before operation can be resumed for operation with the encoder.

p0492 Maximum speed difference per sampling cycle / n_dif max/samp_cyc

VECTOR_G

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the maximum permissible speed difference within the current controller sampling time.

Dependency: See also: r1408

See also: F07902, F31118, A31418, F32118, A32418, F33118, A33418

Note: For a value of 0.0, the speed change monitoring is disabled.

The following applies for square-wave encoders:

If the speed difference exceeds the threshold value p0492, depending on p0491, either encoderless closed-loop speed/torque control is selected or the drive is switched off with fault F3x118.

The following applies for other speed encoders:

If the speed difference exceeds threshold value p0492, in order to avoid subsequent faults, the old speed actual value is kept and after time p2178 shut down with fault F07902 (motor stalled).

p0492 Square-wave encoder maximum speed difference per sampling cycle / n_dif max/samp_cyc

ENC

Description: Sets the maximum permissible velocity difference within the current controller sampling time for square-wave encoders.

Dependency: See also: F31118, A31418

Note: For a value of 0.0, velocity change monitoring is disabled.
if the set maximum velocity difference is only exceeded for one sampling time of the current controller, then an appropriate alarm is output. However, if the maximum speed difference is exceeded over several sampling times, then a corresponding fault is output.

p0493[0...n] Zero mark selection input terminal / ZM_sel inp_term

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	8	0

Description: Sets the input terminal for selecting the reference mark via BERO/switching signal when performing referencing with several zero marks.
The encoder interface supplies the position of the reference mark, which was detected immediately after the positive edge of the BERO signal.

Value:
0: No selection via BERO
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
Regarding the terminal designation:
The first designation is valid for CU320-2, the second for CU310-2.

Note: Refer to the encoder interface for PROFIdrive.
The terminal must be set as input (p0728).
For p0493 = 0 (factory setting) the following applies:
- there is no logic operation between the reference mark search and an input signal.
For p0493 > 0, the following applies:
- the positive edge of the input signal is evaluated. If the negative edge is to be evaluated, signal inversion must be parameterized via p0490.
- if a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0580, p0680, p2517, or p2518.

p0493 Zero mark selection input terminal / ZM_sel inp_term

ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 3

P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	211	0

Description: Sets the input terminal for selecting the reference mark via BERO/switching signal when performing referencing with several zero marks.

The encoder interface supplies the position of the reference mark, which was detected immediately after the positive edge of the BERO signal.

Value:
0: No selection via BERO
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)
210: DI 0 (X130 / 1.2)
211: DI 1 (X130 / 1.5)

Caution:

In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Regarding the terminal designation:

The first designation is valid for CU320-2, the second for CU310-2.

Note: Refer to the encoder interface for PROFIdrive.

The terminal must be set as input (p0728).

For p0493 = 0 (factory setting) the following applies:

- there is no logic operation between the reference mark search and an input signal.

For p0493 > 0, the following applies:

- the positive edge of the input signal is evaluated. If the negative edge is to be evaluated, signal inversion must be parameterized via p0490.

- if a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0580, p0680, p2517, or p2518.

p0494[0...n] Equivalent zero mark input terminal / ZM_equiv inp_term

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3

P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	8	0

Description: Selects the input terminal for connecting an equivalent zero mark (external encoder zero mark).

Value:
0: No equivalent zero mark (evaluation of the encoder zero mark)
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Caution:

In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
For p0494 = 0 (factory setting), the setting in p0495 is effective.
Regarding the terminal designation:
The first designation is valid for CU320-2, the second for CU310-2.

Note: Refer to the encoder interface for PROFIdrive.
The terminal must be set as input.

p0495[0...2] Equivalent zero mark input terminal / ZM_equiv input

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** 4735
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	8	0

Description: Selects the input terminal for connecting an equivalent zero mark (external encoder zero mark).

Value:
0: No equivalent zero mark (evaluation of the encoder zero mark)
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Index:
[0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: See also: p0494

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).
For p0494 > 0, the setting in p0494 is effective and p0495 is invalid.
Regarding the terminal designation:
The first designation is valid for CU320-2, the second for CU310-2.

Note: Refer to the encoder interface for PROFIdrive.
The terminal must be set as input.
For p0495 = 0 (factory setting), the encoder zero mark is evaluated as zero mark.
For p0495 > 0, the following applies:
Depending on the direction of motion, the positive or negative edge at the appropriate input is evaluated.
- increasing position actual values (r0482) --> the 0/1 edge is evaluated.
- decreasing position actual values (r0482) --> the 1/0 edge is evaluated.
Only one zero mark is supported. If function 2, 3 or 4 is selected, this results in a fault message in Gn_ZSW.
The inversion of the inputs via p0490 affects the function "referencing with equivalent zero mark". This is the reason that the edge evaluation is interchanged as a function of the direction of motion.
An input can only be assigned to one encoder as measuring probe 1, 2 or equivalent zero mark.
Exception:
Simultaneous use as measuring probe and equivalent zero mark is possible for the same encoder, as both functions cannot be simultaneously requested.

p0495 Equivalent zero mark input terminal / ZM_equiv input

p0500 Technology application / Tec application

VECTOR_G

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Applications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	6	1

Description: Sets the technology application.
The parameter influences the calculation of open-loop and closed-loop control parameters that is initiated using p0578, for example.

Value:
0: Standard drive (VECTOR)
1: Pumps and fans
2: Sensorless closed-loop control down to f = 0 (passive loads)
4: Dynamic in the field weakening range
5: Starting with a high break loose torque
6: High load moment of inertia

Dependency: See also: p2175, p2177

Note: The calculation of parameters dependent on the technology application can be called up as follows:
- when exiting quick commissioning using p3900 > 0
- when writing p0340 = 1, 3, 5 (for p0500 = 6: p0340 = 1, 3, 4)
- when writing p0578 = 1

For p0500 = 0 and when the calculation is initiated, the following parameters are set:
- p1574 = 10 V (separately excited synchronous motor: 20 V)
- p1750.2 = 0
- p1802 = 4 (SVM/FLB without overcontrol)
- p1803 = 106 %
- p1610 = 50 %
- p1611 = 30 %
- p1310 = 50 %
- p1311 = 0 %
- p1381 = 0 %

For p0500 = 1 and when the calculation is initiated, the following parameters are set:
- p1574 = 2 V (separately excited synchronous motor: 4 V)
- p1750.2 = 0
- p1802 = 9 (edge modulation), if r0192.0 = 1
- p1802 = 4, if r0192.0 = 0
- p1803 = 106 %
- p1310, p1311, p1381, p1611, p1610 the same as for p0500 = 0

For p0500 = 2 and when the calculation is initiated, the following parameters are set:
- p1574 = 2 V (separately excited synchronous motor: 4 V)
- p1750.2 = 1: Encoderless control of the induction motor is effective down to zero frequency.

This operating mode is possible for passive loads. These include applications where the load does not generate regenerative torque when breaking away and the motor comes to a standstill (zero speed) itself when the pulses are inhibited.
- p1802, p1803, p1310, p1311, p1381, p1610, p1611 the same as for p0500 = 0

The setting of p1750 is only relevant for induction motors.

p1802 and p1803 are only changed, in all cases, if a sine-wave output filter (p0230 = 3, 4) has not been selected.

For p0500 = 4: (presetting for VECTOR with PM250 power unit)
- p1574 = 30 V
- p1750.2 = 0
- p1802 = 2 (SVM with overcontrol)
- p1803 = 106 %
- p1381 = 6 % (to avoid overcontrol)
- p1654 = p0115[1]
- p1402.11 = 1
- p1310, p1311, p1610, p1611 the same as for p0500 = 0

For p0500 = 5: (for speed-controlled starting for vector control without encoder)
- p1574, p1750.2, p1802, p1803, p1381 the same as for p0500 = 0
- p1610 = 80 % (separately excited synchronous motor: 50 %)
- p1611 = 80 % (separately excited synchronous motor: 50 %)
- p1310 minimum 80%
- p1311 at least 30 %

For p0500 = 6: (for high moments of inertia with/without gearbox coupling)
- p1574, p1750.2, p1802, p1803, p1610, p1611, p1310, p1311 the same as for p0500 = 0

The following settings change the speed control for p0340 = 1, 3, 4

They are only reset using p0340 = 1 or p3900 > 0.
- p0342 = 10 (motor moment of inertia factor, if previously p0342 = 1)

The real factor can be entered in the commissioning tool.
- p1400.20 = 1 (acceleration model)
- p1441, p1442, p1452 calculated
- p1496 = 100 %
- p1959.14 = 1 (speed actual value smoothing is calculated)

- p1967 = 80 %

The following settings are only reset again using p3900 = 1.

- p1115 = 1

- p1130, p1131 ramp-function generator rounding calculated from p1120, p1121 and r0345.

The moment of inertia estimator (p1400.18, p5310) can be activated, depending on the specific application, to adaptively determine the load moment of inertia in operation.

p0505 Selecting the system of units / Unit sys select

VECTOR_G, B_INF, ENC

Can be changed: C2(5)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Applications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	4	1

Description: Sets the actual system of units.

Value:
1: SI system of units
2: System of units referred/SI
3: US system of units
4: System of units referred/US

Dependency: The parameter can only be changed in an offline project using the commissioning tool.

Caution: If a per unit representation is selected and if the reference parameters (e.g. p2000) are subsequently changed, then the physical significance of several control parameters is also adapted at the same time. As a consequence, the control behavior can change (see p1576, p1621, p1744, p1752, p1755 and p1609, p1612, p1619, p1620).

Note: Reference parameter for the unit system % are, for example, p2000 ... p2004. Depending on what has been selected, these are displayed using either SI or US units.

p0514[0...9] Scaling-specific reference values / Scal spec ref val

VECTOR_G, B_INF

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000001	10000000.000000	1.000000

Description: Sets the reference values for the specific scaling of BICO parameters.

The specific scaling is active when interconnecting with other BICO parameters, and can be used in the following cases:

1. Parameter with the marking "Scaling: p0514".

2. Changing the standard scaling for parameters with the marking "Scaling: p2000" ... "Scaling: p2007".

Relative values refer to the corresponding reference value. The reference value corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

To specifically scale BICO parameters, proceed as follows:

- set the reference value (p0514[0...9]).

- set the numbers of the parameters, which should be active for the scaling, corresponding to the index of p0514 (p0515[0...19] ... p0524[0...19]).

For parameters with the marking "Scaling: p0514", which are not entered in p0515[0...19] to p0524[0...19], the reference value 1.0 (factory setting) applies.

Index:
[0] = Parameters in p0515[0...19]

Note: The parameter is pre-assigned a value of 0 and cannot be changed.

p0530[0...n] Bearing version selection / Bearing vers sel

VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 1
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: SESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	104	0

Description: Sets the bearing version.
Corresponding to the bearing version entered, its code number (p0531) is automatically set.
0 = No data
1 = Manual entry
101 = STANDARD
102 = PERFORMANCE
103 = HIGH PERFORMANCE
104 = ADVANCED LIFETIME

Dependency: See also: p0301, p0531, p0532, p1082

Notice: For p0530 = 101, 102, 103, 104, the maximum bearing speed (p0532) is write protected. Write protection is withdrawn with p0530 = 1.
If p0530 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3). The maximum speed of the bearing is factored into the limit for the maximum speed p1082.

Note: For a motor with DRIVE-CLiQ, p0530 can only be set to 1.

p0531[0...n] Bearing code number selection / Bearing codeNo sel

VECTOR_G	**Can be changed:** C2(3)	**Calculated:** -	**Access level:** 1
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	65535	0

Description: Display and setting the code number of the bearing.
When setting p0301 and p0530 the code number is automatically pre-assigned and is write protected. The information in p0530 should be observed when removing write protection.

Dependency: See also: p0301, p0530, p0532, p1082

Notice: If p0531 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3). The maximum speed of the bearing is factored into the limit for the maximum speed p1082.

Note: p0531 cannot be changed on a motor with DRIVE-CLiQ.

p0532[0...n] Bearing maximum speed / Bearing n_max

VECTOR_G	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [rpm]	210000.0 [rpm]	0.0 [rpm]

Description: Sets the maximum speed of the bearing.
The following applies when calculating the maximum speed (p1082):
- for p0324 = 0 or p0532 = 0, p0322 is used.
- for p0324 > 0 and p0532 > 0, the minimum value from the two parameters is used.

Dependency: See also: p0301, p0322, p0324, p0530, p1082

Notice: This parameter is pre-assigned in the case of motors from the motor list (p0301) if a bearing version (p0530) is selected.

When selecting a catalog motor, this parameter cannot be changed (write protection). The information in p0530 should be observed when removing write protection.

If p0532 is changed during quick commissioning (p0010 = 1), then the maximum speed p1082, which is also associated with quick commissioning, is pre-assigned appropriately. This is not the case when commissioning the motor (p0010 = 3).

r0565[0...15] CO: Probe time stamp / Probe t_stamp

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and connector output for the time stamp MT_ZS_1 up to MT_ZS_16.

Displays the measuring time for an edge at the digital input for the "central measuring probe evaluation stage 3" function.

The measuring time is specified as 16-bit value with a resolution of 0.25 µs.

Priority:

MT1 ... MT8, oldest ... newest time stamp

r0566[0...3] CO: Probe time stamp reference / Probe t_stamp name

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and connector output for the time stamp reference MT_ZSB1 up to MT_ZSB4.

r0567 CO: Probe diagnostics word / Probe diag_word

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and connector output for diagnostics word MT_DIAG.

p0570 Inhibit list values effective number / Inhib list no

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: Applications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	50	0

Description: Sets the number of parameters in the inhibit list p0571.

This number of parameters can be automatically excluded from the calculation of the motor and control parameters (see p0340, p0578), starting from index 0.

Note: Defines the number of entries in p0571 that should be taken into account.

The inhibit list is deactivated for a value of 0.

p0571[0...49] Inhibit list motor/closed-loop control parameter calculation / Inhib list calc

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
	P group: Applications	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	2142	0

Description: The inhibit list contains parameters that should be withdrawn from the automatic motor and closed-loop control parameter calculation (p0340, p0578).

Value:
0: No parameter
600: Motor temperature sensor
640: Current limit
1082: Maximum speed
1460: Speed controller P gain
1462: Speed controller integral time
1470: Speed controller P gain encoderless
1472: Speed controller integral time encoderless
1520: Torque limit upper/motoring
1521: Torque limit lower/regenerative
1530: Power limit motoring
1531: Power limit regenerative
1590: Flux controller P gain
1592: Flux controller integral time
2141: Speed threshold 1
2142: Hysteresis speed 1

Note: Parameter p0570 defines the number of entries (starting at index 0) in the inhibit list. p0572 can be used to define for which drive data sets the inhibit list should apply.

If a motor data set is entered into a parameter number, then this is not overwritten as soon as only one drive data set refers to the motor data set (p0186).

p0572[0...n] Activate/deactivate inhibit list / Inh_list act/deact

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Applications	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Setting for activating/deactivating the inhibit list.

Depending on the setting, the parameters of the inhibit list (p0571) should be overwritten when calculating the motor and closed-loop control parameters for the particular drive data set (DDS).

Value:
0: No
1: Yes

Note: If value = 0:

The automatic calculation (p0340, p0578) also overwrites the parameters of the inhibit list (p0571).

If value = 1:

The automatic calculation (p0340, p0578) does not overwrite the parameters of the inhibit list (p0571).

p0573 Inhibit automatic reference value calculation / Inhibit calc

VECTOR_G, B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
	P group: Applications	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Setting to inhibit the calculation of reference parameters (e.g. p2000) when automatically calculating the motor and closed-loop control parameters (p0340, p3900).

Value: 0: No
1: Yes

Notice: The inhibit for the reference value calculation is canceled when new motor parameters (e.g. p0305) are entered and only one drive data set exists (p0180 = 1). This is the case during initial commissioning.
Once the motor and control parameters have been calculated (p0340, p3900), the inhibit for the reference value calculation is automatically re-activated.

Note: If value = 0:
The automatic calculation (p0340, p3900) overwrites the reference parameters.
If value = 1:
The automatic calculation (p0340, p3900) does not overwrite the reference parameters.

p0578[0...n] Calculate technology-dependent parameters / Calc tec par

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Applications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: This parameter is used to calculate all parameters that depend on the technology of the application (p0500).
All of the parameters are calculated that can also be determined using p0340 = 5.

Value: 0: No calculation
1: Complete calculation

Note: At the end of the calculations, p0578 is automatically set to 0.

p0595 Technological unit selection / Tec unit sel

VECTOR_G (Tech_ctrl)

Can be changed: C2(5)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Applications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	32	1

Description: Selects the units for the parameters of the technology controller.
For p0595 = 1, 2, the reference variable set in p0596 is not active.

Value:

1: %
2: 1 referred no dimensions
3: bar
4: °C
5: Pa
6: ltr/s
7: m³/s
8: ltr/min
9: m³/min
10: ltr/h
11: m³/h
12: kg/s
13: kg/min
14: kg/h
15: t/min
16: t/h
17: N
18: kN
19: Nm
20: psi
21: °F
22: gallon/s
23: inch³/s
24: gallon/min
25: inch³/min
26: gallon/h
27: inch³/h
28: lb/s
29: lb/min
30: lb/h
31: lbf
32: lbf ft

Dependency: Only the unit of the technology controller parameters are switched over (unit group 9_1).

See also: p0596

Note: When switching over from % into another unit, the following sequence applies:

- set p0596
- set p0595 to the required unit

p0596 Technological unit reference quantity / Tec unit ref qty

VECTOR_G (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.01	340.28235E36	1.00

Description: Sets the reference quantity for the technological units.

When changing over using changeover parameter p0595 to absolute units, all of the parameters involved refer to the reference quantity.

Dependency: See also: p0595

Notice: When changing over from one technological unit into another, or when changing the reference parameter, a changeover is not made.

p0600[0...n] Motor temperature sensor for monitoring / Mot temp_sensor

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Function diagram:** 8016
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	21	0

Description: Sets the sensor to monitor the motor temperature.

The sensor type used is set in p0601.

Value:
0: No sensor
1: Temperature sensor via encoder 1
2: Temperature sensor via encoder 2
3: Temperature sensor via encoder 3
10: Temperature sensor via a BICO interconnection
11: Temperature sensor via Motor Module / CU terminals
20: Temperature sensor via a BICO interconnection p0608
21: Temperature sensor via a BICO interconnection p0609

Dependency: See also: r0458, p0601, p0603

Caution: If, for a selected temperature sensor (p0600 > 0), the motor temperature sensor is not connected but another sensor, then the temperature adaptation of the motor resistances must be switched out. Otherwise, in controlled-loop operation, torque errors will occur that will mean that the drive will not be able to be stopped.

Notice: The parameter is calculated in the drive using p0340 and is inhibited for p0340 > 0.

For operation with a braking resistor (p1300 = 15), p0600 = 11 is automatically set when commissioning.

Note: For p0600 = 0:

With induction motors, the motor temperature is calculated using the motor temperature model (see also p0612.1).

For p0600 = 1, 2, 3:

Bimetallic switch (p0601 = 4) and PT100 temperature sensor (p0601 = 5) are not supported.

For p0600 = 10:

The BICO interconnection should be executed via connector input p0603.

For p0600 = 11:

For SINAMICS S120 AC Drive (AC/AC) and using the Control Unit Adapter CUA31, the temperature sensor is connected at the adapter (X210).

For p0600 = 20, 21:

The BICO interconnection should be executed via connector input p0608 or p0609.

Associated parameters: p0601, p4600 ... p4603, p4610 ... p4613

p0601[0...n] Motor temperature sensor type / Mot_temp_sens type

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Function diagram:** 8016
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	11	2

Description: Sets the sensor type for the motor temperature monitoring.

Value:
0: No sensor
1: PTC alarm & timer
2: KTY84
3: KTY84 and PTC (only for motors with DRIVE-CLiQ):
4: Bimetallic NC contact alarm & timer
5: PT100
6: PT1000
7: PT1000 and PTC (only for motors with DRIVE-CLiQ):
10: Evaluation via several temperature channels SME12x
11: Evaluation via several temperature channels BICO

Dependency: A thermal motor model is calculated corresponding to p0612.

See also: r0458, p0600, p0612

Note: The temperature sensor for the temperature evaluation is set in p0600.
For p0600 = 10 (temperature sensor via a BICO interconnection), the setting in p0601 has no significance.
Information on using temperature sensors is provided in the following literature:
- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual
For p0601 = 1:
Tripping resistance = 1650 Ohm.
After the tripping resistance has been exceeded, an appropriate alarm is output and after the delay time set in p0606 has expired, an appropriate fault is output.
For p0601 = 3, 7:
For motors with DRIVE-CLiQ and two temperature sensors, the value is automatically set.
For p0601 = 4:
Tripping resistance = 100 Ohm.
After tripping, an appropriate alarm is output and after the delay time set in p0606 has expired, an appropriate fault is output.
For p0601 = 5:
It is only possible to evaluate a PT100 for p0600 = 11 and r0192.15 = 1.
For p0601 = 10:
Not permitted for p0600 = 0, 10, 11.
Associated parameters: p4600 ... p4603 (can be switched via EDS)
For r0458.8 = 1, a temperature evaluation is supported through several temperature channels.
Examples:
When evaluating using SME120 or SME125, 4 temperature channels are available (parameterized using p4600, p4601, p4602, p4603).
When evaluating using CU310 and CUA32, 2 temperature channels are available (encoder interface: parameterization via p4600, terminal block: parameterization via p4601).
For p0601 = 11:
Not permitted for p0600 = 0, 10, 11.
Associated parameters: p4610 ... p4613 (can be switched via MDS)

p0601 Temperature sensor, sensor type / Temp_sens type

B_INF			
	Can be changed: U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	6	0

Description: Sets the sensor type for the temperature measurement at input X21 (booksize) or X41 (chassis).
The measured value is displayed in r0035.

Value:
0: No sensor
1: PTC alarm & timer
2: KTY84
4: Bimetallic NC contact alarm & timer
6: PT1000

Dependency: See also: r0035

Note: The measured value display depends on the selected sensor type.
For p0601 = 0:
--> r0035 = -200 °C
For p0601 = 1:
Tripping resistance = 1650 Ohm (lower resistance --> r0035 = -50 °C, higher resistance --> r0035 = 250 °C).
For p0601 = 2, 6:
Displays the temperature in °C.
For p0601 = 4:
r0035 = -50 °C
--> The tripping resistance is less than 100 Ohm (bimetallic NC contact is closed or has a short-circuit).
r0035 = 250 °C
--> The tripping resistance is greater than 100 Ohm (bimetallic NC contact is open, not connected or has a wire breakage).
When using the following components, a value of 4 is set as the factory setting and can no longer be changed:
- Basic Line Module (BLM) with internal Braking Module.
- Active Line Module (ALM) with line filter Active Interface Module (AIM, p0220[0] = 41 ... 45).
In these cases, in addition to the temperature display, the temperature is also monitored.

p0602 Par_connection power unit number, temperature sensor / PU_no temp_sensor

VECTOR_G (Parallel)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	10	0

Description: Sets the power unit number to which the temperature sensor is connected. The value corresponds to the Power unit Data Set number (PDS) of the power unit. The number of power unit data sets is defined in p0120.

p0603 CI: Motor temperature signal source / Mot temp s_s

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8016
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source to evaluate the motor temperature via a BICO interconnection.
Dependency: See also: p0600
Note: Temperature sensor KTY/PT1000: Valid temperature range -48 °C ... 248 °C.
Temperature sensor PTC/bimetallic switch with NC contact:
For a value of -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC/bimetal contact closed.
For a value of 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC/bimetal contact open.
Note:
When using a Terminal Module 31 (TM31), the following applies:
- the sensor type used is set using p4100.
- the temperature signal is interconnected using CO: r4105.

p0604[0...n] Mot_temp_mod 2: sensor alarm threshold / Mod 2: sens A_thr

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8016
	P group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [°C]	200.0 [°C]	130.0 [°C]

Description: Sets the alarm threshold for monitoring the motor temperature for motor temperature model 2 or KTY/PT1000.

After the alarm threshold is exceeded, alarm A07910 is output and timer (p0606) is started.

If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output.

Dependency: See also: p0606, p0612

See also: F07011, A07910

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The hysteresis is 2 K.

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0605[0...n] Mot_temp_mod 1/2 sensor threshold and temperature value / Mod 1/2 sens thr_T

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8016, 8017
	P group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [°C]	240.0 [°C]	145.0 [°C]

Description: Sets the threshold and temperature value to monitor the motor temperature.

Temperature model 1 (I2t, p0612.0 = 1):

The following applies for firmware version < 4.7 SP6 or p0612.8 = 0:

- sets the alarm threshold. If the model temperature (r0034) exceeds the alarm threshold, then alarm A07012 is output.
- this value is simultaneously used as rated winding temperature.

The following applies from firmware version 4.7 SP6 and p0612.8 = 1:

- p5390: when commissioning a catalog motor for the first time, p0605 is copied to p5390.
- p5390: p5390 is of significance when evaluating the alarm threshold.
- p5390: the stator winding temperature (r0632) is used to initiate the signal.
- p0627: when a catalog motor is commissioned for the first time, p0605 - 40 °C is copied to p0627.
- p0627: p0627 is of significance for the rated temperature.

Motor temperature model 2 (p0612.1 = 1) or measurement:

- sets the fault threshold. If the temperature (r0035) exceeds the fault threshold, then fault F07011 is output.

Dependency: See also: r0034, p0606, p0611, p0612

See also: F07011, A07012

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Motor temperature model 1 (I2t):

The following applies for firmware version < 4.7 SP6 or p0612.8 = 0:

p0605 also defines the final temperature of the model for r0034 = 100 %. Therefore, p0605 has no influence on the time up to alarm A07012 being issued. The time is only determined by time constant p0611, the actual current and the reference value p0318. For p0318 = 0, the rated motor current is used as reference value.

Note: The hysteresis is 2 K.

When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0606[0...n] Mot_temp_mod 2: sensor timer / Mod 2:sens timer

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8016
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [s]	600.000 [s]	0.000 [s]

Description: Sets the timer for monitoring the motor temperature for motor temperature model 2 or KTY/PT1000.

This timer is started when the temperature alarm threshold (p0604) is exceeded.

If the timer has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F07011 is output.

If the temperature fault threshold (p0605) is prematurely exceeded before the timer has expired, then fault F07011 is immediately output.

Dependency: See also: p0604, p0605

See also: F07011, A07910

Note: With p0606 = 0 s, the timer is deactivated and only the fault threshold is effective.

KTY/PT1000: When setting the minimum value, the timer is disabled and a fault is not output until p0605 is exceeded.

PTC, bimetallic NC contact: The timer minimum value has no special significance.

p0607[0...n] Temperature sensor fault timer / Sensor fault time

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8016
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [s]	600.000 [s]	0.100 [s]

Description: Sets the timer between the output of alarm and fault for a temperature sensor fault.

If there is a sensor fault, this timer is started.

If the sensor fault is still present after the timer has expired, a corresponding fault is output.

Notice: The parameterized time is internally rounded-off to an integer multiple of 48 ms.

Note: If the motor is an induction motor, the timer is switched off when setting the minimum value and no alarm is output. Temperature monitoring is then based on the thermal model.

p0608[0...3] CI: Motor temperature signal source 2 / Mot_temp s_s 2

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8016

	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets signal source 2 to evaluate the motor temperature via a BICO interconnection.

Index: [0] = Motor temperature channel 1
[1] = Motor temperature channel 2
[2] = Motor temperature channel 3
[3] = Motor temperature channel 4

Dependency: See also: p0600

Note: Temperature sensor KTY/PT1000:
Valid temperature range -48 °C ... 248 °C.
Temperature sensor PTC/bimetallic switch with NC contact:
For a value of -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC/bimetal contact closed.
For a value of 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC/bimetal contact open.
Note:
When using a Terminal Module 120 (TM120), the following applies:
- the sensor type used is set using p4100.
- the temperature signal is interconnected using connector output r4105.

p0609[0...3] CI: Motor temperature signal source 3 / Mot_temp s_s 3

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8016
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets signal source 3 to evaluate the motor temperature via a BICO interconnection.
Index: [0] = Motor temperature channel 1
[1] = Motor temperature channel 2
[2] = Motor temperature channel 3
[3] = Motor temperature channel 4
Dependency: See also: p0600
Note: Temperature sensor KTY/PT1000:
Valid temperature range -48 °C ... 248 °C.
Temperature sensor PTC/bimetallic switch with NC contact:
For a value of -50 °C, the following applies: Motor temperature < nominal response temperature of the PTC/bimetal contact closed.
For a value of 250 °C, the following applies: Motor temperature >= nominal response temperature of the PTC/bimetal contact open.
Note:
When using a Terminal Module 120 (TM120), the following applies:
- the sensor type used is set using p4100.
- the temperature signal is interconnected using connector output r4105.

p0610[0...n] Motor overtemperature response / Mot temp response

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Function diagram:** 8016, 8017, 8018, 8019
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	12	12

Description: Sets the system response when the motor temperature reaches the alarm threshold.
Value: 0: No response only alarm no reduction of I_max
1: Messages, reduction of I_max
2: Messages, no reduction of I_max
12: Messages, no reduction of I_max, temperature storage
Dependency: See also: p0601, p0604, p0605, p0614, p0615, p5390
See also: F07011, A07012, A07910

Note: The relevant alarm threshold (p0604, p0605, p5390) depends on the setting in p0600, p0601 and p0612. If the temperature measurement and temperature model are simultaneously active, then the temperature provided by the temperature model is used.

If value = 0:

An alarm is output and I_max is not reduced.

If value = 1:

An alarm is output and a timer is started. A fault is output if the alarm is still active after this timer has expired.

The I_max reduction can result in a lower output frequency.

- for KTY/PT1000/PT100, the following applies: reduction of I_max.

- for PTC (p0601 = 1) or bimetallic NC contact (p0601 = 4) the following applies: I_max is not reduced.

If value = 2:

An alarm is output and a timer is started. A fault is output if the alarm is still active after this timer has expired.

If value = 12:

Behavior is always the same as for value 2.

For motor temperature monitoring without temperature sensor, when switching off, the model temperature is saved in a non-volatile fashion. When switching on, the same value (reduced by p0614) is taken into account in the model calculation. As a consequence, the UL508C specification is fulfilled.

p0611[0...n] I2t motor model thermal time constant / I2t MotMod Tc

VECTOR_G

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8017
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [s]	20000 [s]	0 [s]

Description: Sets the winding time constant.

The time constant specifies the warm-up time of the cold stator winding when loaded with the motor standstill current (rated motor current, if the motor standstill current is not parameterized) up until a temperature rise of 63 % of the continuously permissible winding temperature has been reached.

Dependency: The parameter is only used for synchronous motors (p0300 = 2xx, 4) and synchronous reluctance motors (p0300 = 6xx).

See also: r0034, p0612, p0615

See also: F07011, A07012, A07910

Notice: This parameter is automatically pre-set from the motor database for motors from the motor list (p0301).

When selecting a catalog motor, this parameter cannot be changed (write protection). Information in p0300 should be carefully observed when removing write protection.

When exiting commissioning, p0612 is checked, and where relevant, is pre-assigned to a value that matches the motor power, if a temperature sensor was not parameterized (see p0601).

Note: When parameter p0611 is reset to 0, then this switches out the thermal I2t motor model (refer to p0612).

If no temperature sensor is parameterized, then the ambient temperature for the thermal motor model is referred to p0625.

p0612[0...n] Mot_temp_mod activation / Mot_temp_mod act

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Function diagram:** 8017, 8018, 8019
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0010 0000 0010 bin

Description: Setting to activate the motor temperature model.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Activate mot_temp_mod 1 (I2t)	Yes	No	-
01	Activate mot_temp_mod 2	Yes	No	-
02	Activate mot_temp_mod 3	Yes	No	-
08	Activate mot_temp_mod 1 (I2t) extensions	Yes	No	-
09	Activate mot_temp_mod 2 extensions	Yes	No	-
12	Mot_temp_mod 1 (I2t) ambient temperature can be adjusted	Yes (via p0613)	No (fixed 20 °C)	-

Dependency: For synchronous motors and synchronous reluctance motors, when exiting commissioning, temperature model 1 is automatically activated if a time constant has been entered in p0611.

See also: r0034, p0604, p0605, p0606, p0611, p0613, p0615, p0625, p0626, p0627, p0628, r0630, r0631, r0632, r0633, p5350, r5389, p5390, p5391

See also: F07011, A07012, A07014, A07910

Notice: For bit 00:

It is only possible to activate this motor temperature model (I2t) for a time constant greater than zero (p0611 > 0).

Note:

Mot_temp_mod: motor temperature model

To comply with standard UL 61800-5-1 Ed. 2, bit 13 and bit 14 must be set.

These bits activate electronic motor overload protection according to IEC 61800-5-1 Ed. 3 / UL 61800-5-1 Ed. 2, with the emulation of an electronic overload relay, Class 20 and the speed sensitivity.

For bit 00 (see also bit 8):

This bit is used to activate/deactivate the motor temperature model for permanent-magnet synchronous motors and synchronous reluctance motors.

For bit 01 (see also bit 9):

This bit is used to activate/deactivate the motor temperature model for induction motors.

For bit 02:

This bit is used to activate/deactivate the motor temperature model for 1FK7/1FG1 motors without encoder, 1FK2 and 1FL6.

Motor temperature model 3 cannot be simultaneously activated with another motor temperature model.

For bit 08:

This bit is used to extend the motor temperature model 1 (I2t).

The following applies for firmware version < 4.7 SP6 (only bit 0):

- this bit has no function. Temperature model 1 operates in the standard mode.

Overtemperature at rated load: p0605 - 40 °C

Alarm threshold: p0605

Fault threshold: p0615

The following applies from firmware version 4.7 SP6 (bits 0 and 8):

- temperature model 1 operates in the extended mode.

Overtemperature at rated load: p0627

Alarm threshold: p5390

Fault threshold: p5391

For bit 09:

This bit is used to extend the motor temperature model 2.

For firmware version < 4.7 following applies (only bit 1):

- this bit has no function. Temperature model 2 operates in the standard mode.

From firmware version 4.7 the following applies (bits 1 and 9):

- this bit should be set. Temperature model 2 then operates in the extended mode and the result of the model is more precise.

For bit 12 (only effective if a temperature sensor has not been parameterized):

This bit is used to set the ambient temperature for the motor temperature model 1 (I2t).

The following applies for firmware version < 4.7 SP6 (only bit 0):

- this bit has no function. Temperature model 1 operates with an ambient temperature of 20 °C.

The following applies from firmware version 4.7 SP6 (bits 0 and 12):

- the ambient temperature can be adapted to the conditions using p0613.

For bit 13:

This bit activates electronic motor overload protection with emulation of an electronic overload relay, Class 20.

For bit 14:

This bit activates the speed dependency of the electronic motor overload protection. Only active if bit 13 is also set.

For bit 15:

At standstill, this bit means that the motor model temperature no longer tracks the temperature measurement.

p0613[0...n] Mot_temp_mod 1/3 ambient temperature / Mod 1/3 amb_temp

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8017, 8019
	P group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-40 [°C]	100 [°C]	20 [°C]

Description: Sets the ambient temperature for motor temperature model 1 or 3.
- temperature model 1 (I2t, p0612.0 = 1):
For firmware version < 4.7 SP6 or p0612.12 = 0, the following applies:
The parameter is not relevant.
From firmware version 4.7 SP6 and p0612.12 = 1, the following applies:
The parameter defines the current ambient temperature.
- temperature model 3 (p0612.2 = 1):
The parameter defines the current ambient temperature.

Dependency: See also: p0612
See also: F07011, A07012

p0614[0...n] Thermal resistance adaptation reduction factor / Therm R_adapt red

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [%]	100 [%]	30 [%]

Description: Sets the reduction factor for the overtemperature of the thermal adaptation of the stator/rotor resistance.
The value is a starting value when switching on. Internally, after switch-on, the reduction factor has no effect corresponding to the thermal time constant.

Dependency: See also: p0610

Note: The reduction factor is only effective for p0610 = 12, and refers to the overtemperature.

p0615[0...n] Mot_temp_mod 1 (I2t) fault threshold / I2t F thr

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8017
	P group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [°C]	220.0 [°C]	180.0 [°C]

Description: Sets the fault threshold for monitoring the motor temperature for motor temperature model 1 (I2t).
The following applies for firmware version < 4.7 SP6:
- fault F07011 is output after the fault threshold is exceeded.
- fault threshold for r0034 = 100 % * (p0615 - 40 °C) / (p0605 - 40 °C).
The following applies from firmware version 4.7 SP6 and p0612.8 = 1:
- the fault threshold in p0615 is preset when commissioning.
- when a catalog motor with motor temperature model 1 (I2t) is being commissioned for the first time, the threshold value is copied from p0615 to p5391.
- p5391 is of significance for evaluating the fault threshold.

Dependency: The parameter is only used for motor temperature model 1 (I2t).
See also: r0034, p0611, p0612
See also: F07011, A07012

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: The hysteresis is 2 K.

p0616[0...n] Motor overtemperature alarm threshold 1 / Mot temp alarm 1

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dyn. index:** MDS, p0130 | **Function diagram:** 8016
P group: Motor | **Unit group:** 21_1 | **Unit selection:** p0505
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.0 [°C]	200.0 [°C]	130.0 [°C]

Description: Sets the alarm threshold 1 for monitoring the motor temperature.

Note: The alarm threshold is not, as for p0604, coupled to the timer p0606. The hysteresis for canceling the fault is 2 K.

p0620[0...n] Thermal adaptation, stator and rotor resistance / Mot therm_adpt R

VECTOR_G

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 2
Data type: Integer16 | **Dyn. index:** MDS, p0130 | **Function diagram:** -
P group: Motor | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	2	1

Description: Sets the thermal adaptation of the stator/primary section resistance and rotor/secondary section resistance according to r0395 and r0396.

Value:
0: No thermal adaptation of stator and rotor resistances
1: Resistances adapted to the temperatures of the thermal model
2: Resistances adapted to the measured stator winding temperature

Note: For p0620 = 1, the following applies:

The stator resistance is adapted using the temperature in r0035 and the rotor resistance together with the model temperature in r0633.

For p0620 = 2, the following applies:

The stator resistance is adapted using the temperature in r0035. If applicable, the rotor temperature for adapting the rotor resistance is calculated from the stator temperature (r0035) as follows:

theta_R = (r0628 + r0625) / (r0627 + r0625) * r0035

For separately excited synchronous motors and p0620 = 1, p0620 = 2 is internally and automatically used for calculating. There is no thermal model to adapt the damping resistances.

p0621[0...n] Identification stator resistance after restart / ID rst restart

VECTOR_G (n/M)

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dyn. index:** MDS, p0130 | **Function diagram:** -
P group: Motor | **Unit group:** - | **Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	2	0

Description: Selects the identification of the stator resistance after booting the Control Unit (only for vector control).

The identification is used to measure the actual stator resistance and from the ratio of the result of motor data identification (p0350) to the matching ambient temperature (p0625) the actual mean temperature of the stator winding is calculated. The result is used to initialize the thermal motor model.

p0621 = 1:

Identification of the stator resistance only when switching on the drive for the first time (pulse enable) after the Control Unit powers up.

p0621 = 2:

Identification of the stator resistance every time the drive is switched on (pulse enable).

p0621 = 3:

One-time identification of the cable resistance p0352 without making a change in the thermal motor model (also suitable for synchronous motors).

Value:
0: No Rs identification
1: Rs identification after switching-on again
2: Rs identification after switching-on each time

Dependency: - perform motor data identification (see p1910) with cold motor.
- enter ambient temperature at time of motor data identification in p0625.
See also: p0622, r0623

Notice: The calculated stator temperature can only be compared with the measured value of a temperature sensor (KTY/PT1000) to a certain extent, as the sensor is usually the warmest point of the stator winding, whereas the measured value of identification reflects the average value of the stator winding.
Furthermore this is a short-time measurement with limited accuracy that is performed during the magnetizing phase of the induction motor.

Note: The measurement is performed in the following cases:
- an induction motor is being used.
- vector control is active (see p1300).
- temperature sensor (KTY/PT1000) is not connected.
- when switching on, the motor remains at standstill.

When a flying restart is performed on a rotating motor, the temperatures of the thermal motor model are set to a third of the overtemperatures. However, this occurs only once when the Control Unit has powered up (e.g. after a power failure).
If identification is activated, the magnetizing time is determined via p0622 and not via p0346. Quick magnetizing (p1401.6) is internally deactivated and alarm A07416 is output. The speed is enabled after completion of the measurement.

p0622[0...n] Motor excitation time for Rs_ident after switching on again / t_excit Rs_id

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	20.000 [s]	0.000 [s]

Description: Sets the excitation time of the motor for the stator resistance identification after switching on again (restart).

Dependency: See also: p0621, r0623

Note: For p0622 < p0346 the following applies:
If identification is activated, the magnetizing time is influenced by p0622. The speed is enabled after measurement is complete, but not before the time in p0346 has elapsed (see r0056 bit 4). The time taken for measurement also depends on the settling time of the measured current.
For p0622 >= p0346 the following applies:
Parameter p0622 is internally limited to the magnetizing time p0346, so that p0346 represents the maximum possible magnetizing time during identification. The entire measurement period (magnetizing plus measurement settling time plus measuring time) will always be greater than p0346.

r0623 Rs identification stator resistance after switch on again / Rs-id Rs aft sw-on

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [ohm]	- [ohm]	- [ohm]

Description: Displays the stator resistance determined using the Rs identification after switching on again.

Dependency: See also: p0621, p0622

p0624[0...n] Motor temperature offset PT100 / Mot T_offset PT100

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8016
	P group: Motor	**Unit group:** 21_2	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-100.0 [K]	100.0 [K]	0.0 [K]

Description: Sets the temperature offset for the PT100 measured value.

If there is a difference between the motor temperature displayed in r0035 and the actual motor temperature, then this offset can be entered into this parameter. thereby compensating for the difference.

Dependency: See also: p0600, p0601, p0602

Note: The parameter only has an influence with the following settings:

- Temperature sensor of the power unit detected (p0600 = 11).
- Sensor type PT100 selected (p0601 = 5).

If the resistance in series with the PT100 (e.g. the cable resistance of the feeder cable) is known, the following conversion formula must be used:

Offset in p0624 = Measured resistance in ohms x 2.5 K/Ohm

Example:

Measured cable resistance = 2 Ohm

--> 2 Ohm x 2.5 K / Ohm = 5.0 K

p0625[0...n] Motor ambient temperature during commissioning / Mot amb_temp com

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8017, 8018
	P group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-40 [°C]	80 [°C]	20 [°C]

Description: Defines the ambient temperature of the motor for calculating the motor temperature model.

Dependency: See also: p0350, p0354

Note: The parameters for stator and rotor resistance (p0350, p0354) refer to this temperature.

If the thermal I2t motor model is activated for permanent-magnet synchronous motors (refer to p0611), p0625 is included in the model calculation if a temperature sensor is not being used (see p0601).

p0626[0...n] Motor overtemperature, stator core / Mot T_over core

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8018
	P group: Motor	**Unit group:** 21_2	**Unit selection:** p0505
	Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	10 [K]	200 [K]	50 [K]

Description: Defines the rated overtemperature of the stator iron referred to ambient temperature in the motor temperature model 2 (p0612.1 = 1).

Dependency: For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311.

See also: p0625

Notice: When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0627[0...n] Motor overtemperature, stator winding / Mot T_over stator

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8017, 8018
	P group: Motor	**Unit group:** 21_2	**Unit selection:** p0505
	Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	15 [K]	200 [K]	80 [K]

Description: Defines the rated overtemperature of the stator winding referred to the ambient temperature.
- motor temperature model 1 (I2t, p0612.0 = 1):
The following applies for firmware version < 4.7 SP6 or p0612.8 = 0:
p0605 is of significance for the rated temperature.
The following applies from firmware version 4.7 SP6 and p0612.8 = 1:
Overtemperature at the rated operating point.
- motor temperature model 2 (p0612.1 = 1):
Overtemperature at the rated operating point.

Dependency: For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311.
See also: p0625

Notice: When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).
The signal is not suitable as a process quantity and may only be used as a display quantity.

p0628[0...n] Motor overtemperature rotor / Mot T_over rotor

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8018
	P group: Motor	**Unit group:** 21_2	**Unit selection:** p0505
	Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	20 [K]	200 [K]	100 [K]

Description: Defines the rated overtemperature of the squirrel cage rotor referred to ambient temperature in the motor temperature model 2 (p0612.1 = 1).

Dependency: For 1LA5 and 1LA7 motors (p0300 = 15, 17), the parameter is pre-set as a function of p0307 and p0311.
See also: p0625

Notice: When selecting a standard induction motor listed in the catalog (p0300 > 100, p0301 > 10000), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: When quick commissioning is exited with p3900 > 0, then the parameter is reset if a catalog motor has not been selected (p0300).

p0629[0...n] Stator resistance reference / R_stator ref

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** 16_1	**Unit selection:** p0349
	Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000 [ohm]	2000.00000 [ohm]	0.00000 [ohm]

Description: Reference value for the identification of the stator resistance every time the drive is switched on.

Dependency: The measurement of the reference value is activated by the automatic calculation (p0340 = 1, 2), if the following conditions apply:
- the motor temperature is at this instant in time less than 30 °C (r0035).
- a temperature sensor is not being used (p0601).

See also: p0621, r0623

Note: The reference value to identify the stator resistance should be manually entered after the first identification (p0629 = r0623). The identification must be realized when the motor is in a cold state, as the value refers to the ambient temperature p0625. The feeder cable resistance should be entered into p0352 before the measurement.

The result must be saved after the first measurement so that the reference is available after the CU has powered up. When changing p0350 or p0352, the reference value p0629 should be re-determined.

r0630[0...n] Mot_temp_mod ambient temperature / Mod T_ambient

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8018
	P group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: SESM, REL	**Scaling:** p2006	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [°C]	- [°C]	- [°C]

Description: Displays the ambient temperature of the motor temperature model (models 2 and 3).

r0631[0...n] Mot_temp_mod stator iron temperature / Mod T_stator

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8018, 8019
	P group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: SESM, REL	**Scaling:** p2006	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [°C]	- [°C]	- [°C]

Description: Displays the stator iron temperature of the motor temperature model (models 2 and 3).

Note: For motor temperature model 1 (p0612.0 = 1), this parameter is not valid:

r0632[0...n] Mot_temp_mod stator winding temperature / Mod T_winding

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8017, 8018, 8019
	P group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: SESM, REL	**Scaling:** p2006	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [°C]	- [°C]	- [°C]

Description: Displays the stator winding temperature of the motor temperature model.

Dependency: See also: F07011, A07012, A07910

r0633[0...n] Mot_temp_mod rotor temperature / Mod rotor temp

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8018, 8019
	P group: Motor	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: SESM, REL	**Scaling:** p2006	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [°C]	- [°C]	- [°C]

Description: Displays the rotor temperature of the motor temperature model (models 2 and 3).

Note: For motor temperature model 1 (p0612.0 = 1), this parameter is not valid:

p0634[0...n] Q flux flux constant unsaturated / PSIQ KPSI UNSAT

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [Vsrms]	100.000 [Vsrms]	0.000 [Vsrms]

Description: The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients.
The parameter weights the unsaturated component of the quadrature axis flux function.

p0635[0...n] Q flux quadrature axis current constant unsaturated / PSIQ KIQ UNSAT

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients.
This parameter describes the interdependency of the unsaturated component of the quadrature axis current.

Dependency: See also: p0634

p0636[0...n] Q flux direct axis current constant unsaturated / PSIQ KID UNSAT

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients.
This parameter describes the interdependency of the unsaturated component of the direct axis current.

Dependency: See also: p0634

p0637[0...n] Q flux flux gradient saturated / PSIQ Grad SAT

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [mH]	10000.00 [mH]	0.00 [mH]

Description: The non-linear and cross-coupled quadrature axis flux functions are defined using 4 coefficients.
This parameter describes the gradients of the saturated component over the quadrature axis current.

Dependency: See also: p0634, p0635, p0636

p0640[0...n] Current limit / Current limit

VECTOR_G	**Can be changed:** C2(1), U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 5722, 6640
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the current limit.

Dependency: See also: r0209, p0323

Note: The parameter is part of the quick commissioning (p0010 = 1); this means that it is appropriately pre-assigned when changing p0305, p0323 and p0338.

The current limit p0640 is limited to r0209 and p0323. The limit to p0323 is not realized if a value of zero is entered there.

The resulting current limit is displayed in r0067 and if required, r0067 is reduced by the thermal model of the Motor Module.

The torque and power limits (p1520, p1521, p1530, p1531) matching the current limit are automatically calculated when exiting the quick commissioning using p3900 > 0 or using the automatic parameterization with p0340 = 3, 5.

For VECTOR the following applies (p0107):

p0640 is limited to 4.0 x p0305.

p0640 is pre-assigned for the automatic self commissioning routine (e.g. to 1.5 x p0305, with p0305 = r0207[1]).

p0640 must be entered when commissioning the system. This is the reason that p0640 is not calculated by the automatic parameterization when exiting the quick commissioning (p3900 > 0).

For SERVO the following applies (p0107):

p0640 is pre-assigned as follows using the automatic parameterization (p0340 = 1, p3900 > 0) taking into account the limits r0209 and r0323:

- for induction motors: p0640 = 1.5 x p0305
- for synchronous motors: p0640 = p0338

p0641[0...n] CI: Current limit scaling signal source / I_lim scal s_s

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6300, 6640
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for scaling the current limit (p0640).

p0643[0...n] Overvoltage protection for synchronous motors / U_over_protect

VECTOR_G (n/M)	**Can be changed:** C2(3)	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Sets the overvoltage protection for synchronous motors in the field-weakening range.

Value:
0: No measure
1: Voltage Protection Module (VPM)

Dependency: See also: p0316, p1082, p1231, p9601, p9801

See also: F07906, F07907

Danger: Danger to life as a result of electric shock due to incorrect parameterization.

When in the generating mode above the speed at the start of field weakening, synchronous motors can generate hazardous high voltages is in the DC link. An excessively high DC link voltage will damage the drive system insulation resulting in death or severe injury.

Before you set parameter p0643=1, carefully ensure that a Voltage Protection Module is correctly connected according to the current version of Equipment Manual SINAMICS S120 Power Units Booksize, and that a Voltage Protection Module that matches the motor is used according to the Configuration Manuals SIMOTICS M-1FE1 synchronous built-in motors.

Note: In the field-weakening range, synchronous motors can, when a fault condition exists, generate high DC link voltages. The following possibilities exist to protect the drive system from being destroyed due to overvoltage:
- limit the maximum speed (p1082) without any additional protection.
The maximum speed without protection is calculated as follows:
p1082 [rpm] <= 11.695 * r0297 / p0316 (or r0334) [Nm/A]
- use a Voltage Protection Module (VPM) in conjunction with the function "Safe Torque Off" (p9601, p9801).
When a fault condition exists, the VPM short-circuits the motors. During the short-circuit, the pulses must be suppressed - this means that the terminals for the function "Safe Torque Off" must be connected to the VPM.
- activating the internal voltage protection (IVP) with p1231 = 3.

p0644[0...n] Current limit excitation induction motor / Imax excit ASM

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
50.0 [%]	300.0 [%]	300.0 [%]

Description: Maximum excitation current of the induction motor referred to the permissible rated current of the power unit (r0207[0]).

Dependency: Only effective for vector control.
See also: p1401, p1573

Note: The parameter is pre-assigned in the automatic calculation for chassis power units.

p0650[0...n] Actual motor operating hours / Mot t_op act

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [h]	4294967295 [h]	0 [h]

Description: Displays the operating hours for the corresponding motor.
The motor operating time counter continues to run when the pulses are enabled. When the pulse enable is withdrawn, the counter is held and the value saved.

Dependency: The following prerequisites must be fulfilled in order to be able to save the operating hours counter in a non-volatile fashion:
- firmware with V2.2 or higher.
- Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).
See also: p0651
See also: A01590

Note: For p0651 = 0, the operating hours counter is disabled.
The operating hours counter in p0650 can only be reset to 0.
The operating hours counter only runs with motor data set 0 and 1 (MDS).

p0651[0...n] Motor operating hours maintenance interval / Mot t_op maint

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [h]	150000 [h]	0 [h]

Description: Sets the service/maintenance intervals in hours for the appropriate motor.
An appropriate message is output when the operating hours set here are reached.

Dependency: See also: p0650
See also: A01590

Note: For p0651 = 0, the operating hours counter is disabled.
When setting p0651 to 0, then p0650 is automatically set to 0.
The operating hours counter only runs with motor data set 0 and 1 (MDS).

p0652[0...n] Motor stator resistance scaling / Mot R_stator scal

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_EQU	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -

Min:	Max:	Factory setting:
10.0 [%]	300.0 [%]	100.0 [%]

Description: Factor to evaluate the damping resistance in the direction of the rotor axis (d axis).
Dependency: See also: p0354, r0374

p0660[0...n] Motor damping resistance q axis scaling / Mot R_damp q scal

VECTOR_G

Can be changed: U, T | **Calculated:** CALC_MOD_EQU | **Access level:** 4
Data type: FloatingPoint32 | **Dyn. index:** MDS, p0130 | **Function diagram:** 6727
P group: Motor | **Unit group:** - | **Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
10.0 [%]	300.0 [%]	100.0 [%]

Description: Factor to evaluate the damping resistance quadrature to the rotor axis (q axis).
Dependency: See also: p0355, r0375

p0680[0...7] Central measuring probe input terminal / Cen meas inp

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	8	0

Description: Sets the digital input used for the function "central measuring probe evaluation".
p0680[0]: Digital input, measuring probe 1
p0680[1]: Digital input, measuring probe 2
...
p0680[7]: Digital input, measuring probe 8

Value:
0: No measuring probe
1: DI/DO 9 (X122.10/X121.8)
2: DI/DO 10 (X122.12/X121.10)
3: DI/DO 11 (X122.13/X121.11)
4: DI/DO 13 (X132.10/X131.2)
5: DI/DO 14 (X132.12/X131.4)
6: DI/DO 15 (X132.13/X131.5)
7: DI/DO 8 (X122.9/X121.7)
8: DI/DO 12 (X132.9/X131.1)

Dependency: See also: p0728

Caution: In order to prevent incorrect measurement values, these parameters may not be written during an active measurement.

Notice: Regarding the terminal designation:
The first designation is valid for CU320-2, the second for CU310-2.
To select the values:
For CX32, NX10 and NX15, only DI/DO 8, 9, 10, 11 can be selected as fast inputs (refer to the Equipment Manual).

Note: DI/DO: Bidirectional Digital Input/Output
Prerequisite: The DI/DO must be set as input (p0728.x = 0).
If a parameter change is rejected, a check should be performed as to whether the input terminal is already being used in p0488, p0489, p0493, p0494, p0495, p0580, p2517 or p2518.

p0681 BI: Central measuring probe synchronizing signal signal source / Cen meas sync_sig

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**

Description: Sets the signal source for the control word of the function "central measuring probe evaluation".

p0684 Central measuring probe evaluation technique / Cen meas eval_tech

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	16	0

Description: Sets the evaluation technique for the "central measuring probe evaluation" function.

Value:
0: Measurement with handshake
1: Measurement without handshake 2 edges
16: Measurement without handshake more than 2 edges

Notice:
For p0684 = 16:
This evaluation procedure is only activated after parameter save and POWER ON.

Note:
During measurement without a handshake, the probe may have a higher evaluation frequency.
The setting "Measurement without handshake" must be supported by the higher-level control. This setting cannot be used for SIMOTION D with integrated SINAMICS or with CX32.
For p0684 = 0:
Changing this evaluation procedure to p0684 = 1 is possible in the RUN state.
Changing this evaluation procedure to p0684 = 16 is only activated after parameter save and POWER ON.
Permissible combinations in p0922 are:
p0922 = 391, 392, 393, 394
For p0684 = 1:
Changing this evaluation procedure to p0684 = 0 is possible in the RUN state.
Changing this evaluation procedure to p0684 = 16 is only activated after parameter save and POWER ON.
Permissible combinations in p0922 are:
p0922 = 391, 392, 393, 394
For p0684 = 16:
Changing this evaluation procedure to p0684 = 0 or to p0684 = 1 is only activated after parameter save and POWER ON.
Permissible combinations in p0922 are:
p0922 = 395

p0690[0...n] Brushless excitation rated current / BLE I_rated

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [A]	1000.00 [A]	0.00 [A]

Description: Sets the rated current of the excitation equipment for the exciter for brushless excitation with a rotating-armature synchronous machine or reverse field induction machine.

Dependency: See also: p0699, r1626
See also: A49205

Notice: For a value = 0, brushless excitation is not activated.

Note: BLE: brushless excitation

p0691[0...n] Reverse field excitation correction factor / RFE correction

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
10 [%]	1000 [%]	100 [%]

Description: Sets the correction factor for the calculated excitation current setpoint of the reverse field exciter for reverse field excitation.

Dependency: See also: p0311, p0390, p0690, p0699
See also: A49205

Note: The correction factor specifies the ratio between the rated excitation current and the rated current of the exciter (p0690). The rated excitation current is the current that flows at the rated operating point of the main machine as stamped on the rating plate.

p0692[0...n] Reverse field excitation iron resistance / RFE iron R

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-100000.00000 [ohm]	100000.00000 [ohm]	0.00000 [ohm]

Description: Sets the ohmic iron resistance of the rotor for the main machine for reverse field excitation.

Dependency: See also: p0699

Note: For a value of 0, it is assumed that the iron resistance is infinitely high.

p0693[0...n] Brushless excitation inductance d-axis saturated / BLE L_d sat

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-1000.00000 [mH]	1000.00000 [mH]	0.00000 [mH]

Description: Sets the saturated inductance of the exciter for brushless excitation with rotating-armature synchronous machine or reverse field induction machine.

A negative value can also be entered as part of optimizing coefficients.

Dependency: See also: p0699

See also: A49205

Notice: For a value = 0, brushless excitation is not activated.

Note: For excitation using a rotating-armature synchronous machine, the equivalent circuit diagram data should be entered, referred to the rotor.

For excitation using a reverse field induction machine, the equivalent circuit diagram data should be entered, referred to the stator.

BLE: brushless excitation

p0694[0...n] Reverse field excitation leakage inductance / RFE L_leak

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-10.00000 [mH]	10.00000 [mH]	0.00000 [mH]

Description: Sets the leakage inductance of the reverse field exciter in mH for reverse field excitation.

A negative value can also be entered as part of optimizing coefficients.

Dependency: See also: p0699

See also: A49205

p0696[0...n] Brushless excitation ratio / BLE ratio

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000	1000.000	0.000

Description: Sets the ratio between the stator and rotor of the exciter for brushless excitation.
For excitation using a rotating-armature synchronous machine, the ratio of the rated excitation current of the main machine to the associated excitation current of the exciter at the rated point of the machine is entered.
For excitation using a reverse field induction machine, the physical ratio at standstill is specified.

Dependency: See also: p0311, p0390, p0699
See also: A49205

Notice: For a value = 0, brushless excitation is not activated.

Note: BLE: brushless excitation

p0697[0...n] Brushless excitation number of pole pairs / BLE PolePair no

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 4
	Data type: Unsigned32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	20	0

Description: Sets the pole pair number of the exciter for brushless excitation using a rotating- armature synchronous machine or using a reverse field induction machine.

Dependency: See also: p0699
See also: A49205

Notice: For a value = 0, brushless excitation is not activated.

Note: BLE: brushless excitation

p0698[0...n] Brushless excitation, excitation resistance / BLE exc_R

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 6727
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-100.00000 [ohm]	100.00000 [ohm]	0.00000 [ohm]

Description: Sets the ohmic excitation resistance of the main machine for brushless excitation for a rotating-armature synchronous machine or reverse field induction machine.

Dependency: See also: p0699
See also: A49205

Notice: For a value = 0, brushless excitation is not activated.

Note: When the rotor resistance is known, this value can be added to the excitation resistance. For excitation using a reverse field induction machine, it should be noted that the rotor resistance specified in the data sheet is referred to the stator; however, the excitation resistance of the main machine is referred to the rotor.
BLE: brushless excitation

p0699[0...n] Excitation configuration / Exc config

VECTOR_G (n/M)	**Can be changed:** C2(1, 3)	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	20	0

Description: Configuration of the excitation.

0:

Excitation via sliprings, default setting.

10:

Brushless excitation for rotating-armature synchronous motor with excitation current setpoint input (FCR).

11:

Brushless excitation for rotating-armature synchronous motor with independently controlled stator voltage (AVR).

20:

Brushless excitation using a reverse field induction machine where the exciter is fed from a SIMOTRAS three-phase AC power controller.

Value:

0: Excitation via sliprings
10: Brushless excitation via rotating-armature synchr. machine (FCR)
11: Brushless excitation via rotating-armature synchr. machine (AVR)
20: Brushless excit. via reverse field induction machine (SIMOTRAS)

Dependency: See also: p0690, p0691, p0692, p0693, p0694, p0696, p0697, p0698

See also: A49205

Warning:

For values = 10, 11:

For excitation using a rotating-armature synchronous machine, it is not permissible that a standing measurement is used for motor data identification, as this can damage the excitation winding of the main machine.

Notice: The following parameters must be assigned values that are not equal to zero in order that the speed-dependent transmission ratio for brushless excitation (p0699 > 0) can be calculated:

p0699 = 10:

p0690, p0693, p0696, p0697, p0698

p0699 = 11:

No excitation current setpoint input

p0699 = 20:

p0690, p0692, p0693, p0696, p0697, p0698

Otherwise, the speed-dependent transmission ratio for brushless excitation as well as for slipring excitation is assumed to be 1.

Note: FCR: field current control

AVR: autonomous voltage control

SIMOTRAS: Siemens three-phase AC power controller

U/f MM: SINAMICS Motor Module in U/f control as excitation controller

p0700[0...n] Macro Binector Input (BI) / Macro BI

VECTOR_G, B_INF	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 1

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 8134
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Sets the limit for a signal to be output via test sockets.

Value: 0: Limiting off
1: Limiting on

Index: [0] = T0
[1] = T1
[2] = T2

Note: Limiting on:

If signals are output outside the permissible measuring range, the signal is limited to 4.98 V or to 0 V.

Limiting off:

If signals are output outside the permissible measuring range, this causes signal overflow. In the case of signal overflow, the signal jumps from 0 V to 4.98 V or from 4.98 V to 0 V.

r0786[0...2] Test socket scaling per volt / TestSktScal/Volt

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8134
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the scaling of the signal to be output.

A change in the output voltage by 1 volt corresponds to the value in this parameter. The units are determined by the interconnected test signal.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: See also: p0771, r0772, r0774, p0777, p0778, p0779, p0780, p0783, p0784

Note: Example:

r0786[0] = 1500.0 and the measuring signal is r0063 (CO: Actual speed smoothed [rpm]).

A change of 1 V at the output of test socket T0 corresponds to 1500.0 [rpm].

p0788[0...2] Test sockets physical address / Test skt PhyAddr

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin

Description: Sets the physical address to output signals via the test sockets.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: Changes only become effective if p0776 does not equal 99.
See also: p0789, r0790

p0789[0...2] Test sockets physical address gain / TestSktPhyAddrGain

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-340.28235E36	340.28235E36	1.00000

Description: Sets the gain of a signal output of a physical address via test sockets.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: Changes only become effective if p0776 does not equal 99.
See also: p0788

r0790[0...2] Test sockets physical address signal value / TestSktsPhyAddrVal

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the actual value of a signal determined via a physical address.

Index: [0] = T0
[1] = T1
[2] = T2

Dependency: Only effective when p0776 = 97 or p0776 = 96.
See also: p0788

p0795 CU digital inputs simulation mode / CU DI simulation

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 2020, 2030, 2031, 2100, 2119, 2120, 2130, 2131, 2132, 2133
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the simulation mode for digital inputs.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	DI 0 (X122.1/X121.1)	Simulation	Terminal eval	-
01	DI 1 (X122.2/X121.2)	Simulation	Terminal eval	-
02	DI 2 (X122.3/X121.3)	Simulation	Terminal eval	-
03	DI 3 (X122.4/X121.4)	Simulation	Terminal eval	-
04	DI 4 (X132.1 / -)	Simulation	Terminal eval	-
05	DI 5 (X132.2 / -)	Simulation	Terminal eval	-
06	DI 6 (X132.3 / -)	Simulation	Terminal eval	-
07	DI 7 (X132.4 / -)	Simulation	Terminal eval	-
08	DI/DO 8 (X122.9/X121.7)	Simulation	Terminal eval	-
09	DI/DO 9 (X122.10/X121.8)	Simulation	Terminal eval	-
10	DI/DO 10 (X122.12/X121.10)	Simulation	Terminal eval	-
11	DI/DO 11 (X122.13/X121.11)	Simulation	Terminal eval	-
12	DI/DO 12 (X132.9/X131.1)	Simulation	Terminal eval	-
13	DI/DO 13 (X132.10/X131.2)	Simulation	Terminal eval	-
14	DI/DO 14 (X132.12/X131.4)	Simulation	Terminal eval	-
15	DI/DO 15 (X132.13/X131.5)	Simulation	Terminal eval	-
16	DI 16 (X122.5/X120.3)	Simulation	Terminal eval	-
17	DI 17 (X122.6/X120.4)	Simulation	Terminal eval	-
20	DI 20 (X132.5/X120.9)	Simulation	Terminal eval	-
21	DI 21 (X132.6/X120.10)	Simulation	Terminal eval	-

Dependency: The setpoint for the input signals is specified using p0796.

See also: p0796, p9620

Notice: If a digital input is used as signal source for the function "STO" (BI: p9620) then it is not permissible to select the simulation mode and this is rejected.

Regarding the terminal designation:

The first designation stands for CU320-2, the second for CU310-2.

Note: This parameter is not saved when data is backed-up (p0971, p0977).

DI: Digital Input

DI/DO: Bidirectional Digital Input/Output

p0796 CU digital inputs simulation mode setpoint / CU DI sim set

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T | **Calculated:** - | **Access level:** 2

Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** 2020, 2030, 2031, 2100, 2119, 2120, 2130, 2131, 2132, 2133

09	DI/DO 9 (X122.10/X121.8)	High	Low	-

10	DI/DO 10 (X122.12/X121.10)	High	Low	-
11	DI/DO 11 (X122.13/X121.11)	High	Low	-
12	DI/DO 12 (X132.9/X131.1)	High	Low	-
13	DI/DO 13 (X132.10/X131.2)	High	Low	-
14	DI/DO 14 (X132.12/X131.4)	High	Low	-
15	DI/DO 15 (X132.13/X131.5)	High	Low	-
16	DI 16 (X122.5/X120.3)	High	Low	-
17	DI 17 (X122.6/X120.4)	High	Low	-
20	DI 20 (X132.5/X120.9)	High	Low	-
21	DI 21 (X132.6/X120.10)	High	Low	-

Dependency: The simulation of a digital input is selected using p0795.
See also: p0795

Notice: Regarding the terminal designation:
The first designation is valid for CU320-2, the second for CU310-2.

Note: This parameter is not saved when data is backed-up (p0971, p0977).
DI: Digital Input
DI/DO: Bidirectional Digital Input/Output

p0799[0...2] CU inputs/outputs sampling time / CU I/O t_samp

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2020, 2030, 2031
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of the Control Unit.

Index: [0] = Digital inputs/outputs (DI/DO)
[1] = Not available - analog inputs (AI)
[2] = Not available - analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.
See also: p0009

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).

p0806 BI: Inhibit master control / PcCtrl inhibit

VECTOR_G, B_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source to block the master control.

Dependency: See also: r0807

Note: The commissioning tool (drive control panel) uses the master control, for example.

r0807.0 BO: Master control active / PcCtrl active

VECTOR_G, B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays what has the master control.
The drive can be controlled via the BICO interconnection or from external (e.g. the commissioning tool).

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	Master control active	Yes	No	5030, 6031

Dependency: See also: p0806

Notice: The master control only influences control word 1 and speed setpoint 1. Other control word/setpoints can be transferred from another automation device.

Note: Bit 0 = 0: BICO interconnection active

Bit 0 = 1: Master control for PC/AOP

The commissioning tool (drive control panel) uses the master control, for example.

p0809[0...2] Copy Command Data Set CDS / Copy CDS

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8560
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	15	0

Description: Copies one Command Data Set (CDS) into another.

Index: [0] = Source Command Data Set
[1] = Target Command Data Set
[2] = Start copying procedure

Note: When copying a command data set (CDS), the values in p0700, p1000 and p1500 are not accepted. As a consequence, the associated macros are not executed and inconsistencies are avoided.

Procedure:

1. In Index 0, enter which command data set should be copied.
2. In index 1, enter the command data set that is to be copied into.
3. Start copying: set index 2 from 0 to 1.

p0809[2] is automatically set to 0 when copying is completed.

p0810 BI: Command data set selection CDS bit 0 / CDS sel, bit 0

VECTOR_G, B_INF	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 8560
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to select the Command Data Set bit 0 (CDS bit 0).

Dependency: See also: r0050, p0811, r0836

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The Command Data Set selected using the binector inputs is displayed in r0836.

The currently effective command data set is displayed in r0050.

A Command Data Set can be copied using p0809.

p0811 BI: Command data set selection CDS bit 1 / CDS sel, bit 1

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 8560
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to select the Command Data Set bit 1 (CDS bit 1).

Dependency: See also: r0050, p0810, r0836

Note: The Command Data Set selected using the binector inputs is displayed in r0836.
The currently effective command data set is displayed in r0050.
A Command Data Set can be copied using p0809.

p0819[0...2] Copy Drive Data Set DDS / Copy DDS

VECTOR_G

Can be changed: C2(15)	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8565
P group: Data sets	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	31	0

Description: Copies one Drive Data Set (DDS) into another.
Index: [0] = Source Drive Data Set
[1] = Target Drive Data Set
[2] = Start copying procedure
Note: Procedure:
1. In Index 0, enter which drive data set is to be copied.
2. In index 1, enter the drive data set data that is to be copied into.
3. Start copying: set index 2 from 0 to 1.
p0819[2] is automatically set to 0 when copying is completed.

p0820[0...n] BI: Drive Data Set selection DDS bit 0 / DDS sel, bit 0

	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to select the Drive Data Set, bit 3 (DDS, bit 3).
Dependency: See also: r0051, r0837
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0824[0...n] BI: Drive Data Set selection DDS bit 4 / DDS sel, bit 4

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 8565, 8575
	P group: Data sets	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to select the Drive Data Set, bit 4 (DDS, bit 4).
Dependency: See also: r0051, r0837
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0826[0...n] Motor changeover motor number / Mot_chgov mot no

VECTOR_G	**Can be changed:** C2(3)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Function diagram:** 8575
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	15	0

Description: Sets the freely assignable motor number for the motor changeover.
Dependency: See also: p0827
Notice: When changing over motor data sets with the same motor number (e.g. star-delta changeover) and for a motor with brake, the motor brake remains open during the changeover.
Note: When the motor data sets are changed over, the following applies:
The same motor number signifies the same thermal model.
For the same motor number, the correction values of the Rs, Lh or kT adaptation are applied for the data set changeover (refer to r1782, r1787, r1797).

p0827[0...n] Motor changeover status word bit number / Mot_chg ZSW bit no

VECTOR_G	**Can be changed:** C2(3)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** MDS, p0130	**Function diagram:** 8575
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	15	0

Description: Sets the bit number for every motor data set.
Example:
p0827[0] = 0: For MDS0, r0830.0 is switched.
p0827[1] = 5: For MDS1, r0830.5 is switched.
Dependency: See also: p0826, r0830

Note: A motor is only changed over (a new motor selected) after the pulses have been suppressed.
When the motor data sets are changed over, the following applies:
Bit numbers that are not identical, signify that the motor must be changed over.

p0828[0...n] BI: Motor changeover feedback signal / Mot_chgov fdbk sig

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 8575
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the feedback signal when changing over the motor.
For p0833.0 = 1 the following applies:
This feedback signal (0/1 edge) is required after a motor changeover to enable the pulses.

Dependency: See also: p0833

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

r0830.0...15 CO/BO: Motor changeover status word / Mot_chgov ZSW

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8575
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the status word of the motor changeover.
These signals can be connected to digital outputs to change over the motor.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Motor selection bit 0	High	Low	-
01	Motor selection bit 1	High	Low	-
02	Motor selection bit 2	High	Low	-
03	Motor selection bit 3	High	Low	-
04	Motor selection bit 4	High	Low	-
05	Motor selection bit 5	High	Low	-
06	Motor selection bit 6	High	Low	-
07	Motor selection bit 7	High	Low	-
08	Motor selection bit 8	High	Low	-
09	Motor selection bit 9	High	Low	-
10	Motor selection bit 10	High	Low	-
11	Motor selection bit 11	High	Low	-
12	Motor selection bit 12	High	Low	-
13	Motor selection bit 13	High	Low	-
14	Motor selection bit 14	High	Low	-
15	Motor selection bit 15	High	Low	-

Dependency: See also: p0827

p0831[0...15] BI: Motor changeover contactor feedback / Mot_chg cont fdbk

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 8575
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description:

Sets the signal source for the feedback signal of the contactors when changing over motors.

There is a fixed inter-relationship between energizing the contactor and the feedback signal.

Example:

A changeover is to be made between MDS0 (motor 0) and MDS1 (motor 1). The contactors should be switched using bit 4 (contactor 0) and 5 (contactor 1). The changeover should be made with an interconnection of the feedback signal.

Implementation:

MDS0: p0827[0] = 4, interconnect output to switch contactor 0 to r0830.4, p0831[4] = "input, feedback signal, contactor 0"

MDS1: p0827[1] = 5, interconnect output to switch contactor 1 to r0830.5, p0831[5] = "input, feedback signal, contactor 1"

The following sequence applies when changing over from MDS0 to MDS1:

1. Status bit r0830.4 is deleted. When the feedback signal (p0831[4]) is connected, the system waits until the feedback signal "contactor open" is displayed. If the feedback signal is not connected, then the system waits for the switch-off interlocking time of 320 ms.

2. Status bit r0830.5 is set. If the feedback signal (p0831[5]) is connected, the system waits until the feedback signal "contactor closed" is displayed. If the feedback signal is not connected, then the system waits for the switch-on interlocking time of 160 ms.

Index:

[0] = Feedback signal contactor 0

p0833 Data set changeover configuration / DS_chgov config

VECTOR_G

Can be changed: C2(15) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dyn. index:** - | **Function diagram:** 8575
P group: Data sets | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	0010 bin

Description: Sets the configuration for the motor and encoder changeover.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Contactor changeover from the application/drive	Application	Drive	-
01	Pulse suppression by application/drive	Application	Drive	-
02	Suppress drive parking for EDS changeover	Yes	No	-

Note:

For bit 00:

When the bit is set and the motor has to be changed over, then p0827 must be set differently in the appropriate motor data sets.

For bit 02:

The bit defines whether, for an EDS changeover, the status signal Gn_ZSW.14 is suppressed (parking encoder active).

For motor changeover to running motor:

The "flying restart" function should also be activated (p1200) when changing over to a motor that is already running.

r0835.0...12 CO/BO: Data set changeover status word / Data set sw ZSW

VECTOR_G

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dyn. index:** - | **Function diagram:** 8575
P group: Displays, signals | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	-

Description: Display and BICO output for the status word of the data set switchover.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Motor changeover active	Yes	No	8575

01	Encoder changeover active	Yes	No	-
02	Internal parameter calculation active	Yes	No	-
04	Armature short circuit active	Yes	No	-
05	Identification running	Yes	No	-
06	Friction characteristic plot running	Yes	No	-
07	Rotating measurement running	Yes	No	-
08	Motor data identification running	Yes	No	-
10	Wait for pulse suppression	Yes	No	-
11	Wait for motor changeover feedback signal	Yes	No	-
12	Frequency response measurement running	Yes	No	-

Note: This parameter is only supplied with up-to-date values if data set changeover has been selected or is running.

For bit 00:

The signal is only influenced when a motor changeover is set via p0827 (unequal bit numbers).

For bit 01:

The signal is only influenced when an encoder changeover is set via p0187, p0188, or p0189.

For bit 02:

A data set changeover is delayed by the time required for the internal parameter calculation.

For bit 04:

A data set changeover is only carried out when the armature short circuit is not activated.

For bit 05:

The following applies for SERVO:

A data set changeover is only carried out when pole position identification, encoder adjustment, motor data identification, and rotating measurement are not running.

The following applies for VECTOR:

A data set changeover is only carried out when pole position identification is not running.

For bit 06:

A data set switchover is only carried out when the friction characteristic is not being plotted.

For bit 07 (VECTOR only):

A data set changeover is only carried out when rotating measurement is not running.

For bit 08 (VECTOR only):

A data set changeover is only carried out when motor data identification is not running.

For bit 10:

A motor changeover is set with p0833.1 = 1. It can only be carried out when the application performs pulse suppression.

For bit 11:

A motor changeover is set with p0833.0 = 1. The pulses are only enabled when the "Motor changeover feedback" signal is detected.

For bit 12:

A data set switchover is only carried out when the moment of inertia determination (p5320 = 0) is not activated.

r0835.2 CO/BO: Data set changeover status word / Data set sw ZSW

ENC

P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the command data set (CDS) selected via the binector input.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	CDS selection bit 0	ON	OFF	-
01	CDS selection bit 1	ON	OFF	-
02	CDS selection bit 2	ON	OFF	-
03	CDS selection bit 3	ON	OFF	-

Dependency: See also: r0050, p0810, p0811

Note: Command data sets are selected via binector input p0810 and following.
The currently effective command data set is displayed in r0050.

r0837.0...4 CO/BO: Drive Data Set DDS selected / DDS selected

VECTOR_G, ENC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8565
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the drive data set (DDS) selected via the binector input.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	DDS selection bit 0	ON	OFF	-
01	DDS selection bit 1	ON	OFF	-
02	DDS selection bit 2	ON	OFF	-
03	DDS selection bit 3	ON	OFF	-
04	DDS selection bit 4	ON	OFF	-

Dependency: See also: r0051, p0820, p0821, p0822, p0823, p0824

Note: Drive data sets are selected via binector input p0820 and following.
The currently effective drive data set is displayed in r0051.
If there is only one data set, then a value of 0 is displayed in this parameter and not the selection via binector inputs.

r0838[0...3] Motor/Encoder Data Set selected / MDS/EDS selected

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8565
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the selected Motor Data Set (MDS) and the selected Encoder Data Sets (EDS).

Index: [0] = Motor Data Set MDS selected
[1] = Encoder 1 Encoder Data Set EDS selected
[2] = Encoder 2 Encoder Data Set EDS selected
[3] = Encoder 3 Encoder Data Set EDS selected

Dependency: See also: r0049, p0186, p0187, p0188, p0189

Note: Value 99 means the following: No encoder assigned (not configured).

p0839 Motor changeover contactor control delay time / Mot_chg ctrl t_del

VECTOR_G	**Can be changed:** C2(3)	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	500 [ms]	0 [ms]

Description: Sets the delay time for the contactor control for the motor changeover.

Note: The delay time is taken into account in the following cases:

- for feedback signal, previous contactor "Open". The new motor contactor is controlled (energized) after the delay time has expired.
- for the feedback signal, new motor contactor "Closed". The pulses are enabled after the delay time has expired.

p0840[0...n] BI: ON / OFF (OFF1) / ON / OFF (OFF1)

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2501
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the command "ON/OFF (OFF1)".
For the PROFIdrive profile, this command corresponds to control word 1 bit 0 (STW1.0).

Recommendation: When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.

Dependency: See also: p1055, p1056

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: For binector input p0840 = 0 signal, the motor can be moved, jogging using binector input p1055 or p1056.
The command "ON/OFF (OFF1)" can be issued using binector input p0840 or p1055/p1056.
For binector input p0840 = 0 signal, the switching on inhibited is acknowledged.
Only the signal source that originally switched on can also switch off again.
The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For drives with closed-loop speed control (p1300 = 20, 21), the following applies:
- BI: p0840 = 0 signal: OFF1 (braking with the ramp-function generator, then pulse suppression)

For drives with closed-loop torque control (p1300 = 22, 23), the following applies:
- BI: p0840 = 0 signal: immediate pulse suppression

For drives with closed-loop torque control (activated using p1501), the following applies:
- BI: p0840 = 0 signal: No dedicated braking response, but pulse cancelation when standstill is detected (p1226, p1227)

For drives with closed-loop speed/torque control, the following applies:
- BI: p0840 = 0/1 signal: ON (pulses can be enabled)

r0863.1 of a drive can also be selected as signal source.

p0840[0...n] BI: ON / OFF (OFF1) / ON / OFF (OFF1)

B_INF	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 8720, 8820, 8920
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the command "ON/OFF (OFF1)".
For the PROFIdrive profile, this command corresponds to control word 1 bit 0 (STW1.0).

Recommendation: When the setting for this binector input is changed, the motor can only be switched on by means of an appropriate signal change of the source.

Dependency: See also: p1055, p1056

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: For binector input p0840 = 0 signal, the switching on inhibited is acknowledged.
Only the signal source that originally switched on can also switch off again.
The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For active infeeds (Active Line Module and Smart Line Module) the following applies:
- BI: p0840 = 0 signal: OFF1 (reduce Vdc along the ramp, then pulse suppression and precharging contactor/line contactor open)
- BI: p0840 = 0/1 signal: ON (precharging contactor/line contactor close, pulses can be enabled)

For passive infeeds (Basic Line Module) the following applies:
- BI: p0840 = 0 signal: OFF1 (precharging contactor/line contactor open)
- BI: p0840 = 0/1 signal: ON (precharging contactor/line contactor close)

r0863.1 of a drive can also be selected as signal source.
Switching on can be delayed with a wait time (p0862).
Switching off can also be delayed with a wait time (p3490).

p0844[0...n] BI: No coast-down / coast-down (OFF2) signal source 1 / OFF2 s_s 1

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2501, 8720, 8820, 8920
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the first signal source for the command "No coast down/coast down (OFF2)".
The following signals are AND'ed:
- BI: p0844 "No coast-down / coast-down (OFF2) signal source 1"
- BI: p0845 "No coast-down / coast-down (OFF2) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 1 (STW1.1).
BI: p0844 = 0 signal or BI: p0845 = 0 signal
- OFF2 (immediate pulse suppression and switching on inhibited)

BI: p0844 = 1 signal and BI: p0845 = 1 signal
- no OFF2 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p0844[0...n] BI: No coast-down / coast-down (OFF2) signal source 1 / OFF2 s_s 1

B_INF	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 8720, 8820, 8920
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the first signal source for the command to instantaneously switch off the drive.
This corresponds to command "No coast down/coast down (OFF2)" for drives.
The following signals are AND'ed:
- BI: p0844 "No coast-down / coast-down (OFF2) signal source 1"
- BI: p0845 "No coast-down / coast-down (OFF2) signal source 2"

For the PROFIdrive profile, the result of the AND logic operation corresponds to control word 1 bit 1 (STW1.1).
BI: p0844 = 0 signal or BI: p0845 = 0 signal
- OFF2 (immediate pulse suppression and switching on inhibited)

BI: p0844 = 1 signal and BI: p0845 = 1 signal
- no OFF2 (enable is possible)

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For binector input p0844 = 0 signal or p0845 = 0 signal, the following applies:
- precharging contactor/line contactor is additionally opened.

p0845[0...n] BI: No coast-down / coast-down (OFF2) signal source 2 / OFF2 s_s 2

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3

For the PROFIdrive profile, this command corresponds to control word 1 bit 10 (STW1.10).
BI: p0854 = 0 signal
No control by PLC
BI: p0854 = 1 signal
Master control by PLC.

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This bit is used to initiate a response for the drives when the control fails (F07220). If there is no control available, then binector input p0854 should be set to 1.
If a control is available, then STW1.10 must be set to 1 (PZD1) so that the received data is updated. This applies regardless of the setting in p0854 and even in the case of free telegram configuration (p0922 = 999).

p0854 BI: Control by PLC/no control by PLC / Master ctrl by PLC

ENC	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 2501, 8720, 8820, 8920
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for the command "control by PLC/no control by PLC".
For the PROFIdrive profile, this command corresponds to control word 1 bit 10 (STW1.10).
BI: p0854 = 0 signal
No control by PLC
BI: p0854 = 1 signal
Master control by PLC.

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: This bit is used to initiate a response for the drives when the control fails (F07220). If there is no control available, then binector input p0854 should be set to 1.
If a control is available, then STW1.10 must be set to 1 (PZD1) so that the received data is updated. This applies regardless of the setting in p0854 and even in the case of free telegram configuration (p0922 = 999).

p0855[0...n] BI: Unconditionally release holding brake / Uncond open brake

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2501, 2701, 2707
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the command "unconditionally open holding brake".

Dependency: See also: p0858
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.
Note: The signal via binector input p0858 "Unconditionally close holding brake" has a higher priority than via binector input p0855 "Unconditionally open holding brake".

p0856[0...n] BI: Enable speed controller / n_ctrl enable

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2501, 2701, 2707
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for the command "enable speed controller" (r0898.12).
0 signal: Set the I component and speed controller output to zero.
1 signal: Enable speed controller.
Dependency: See also: r0898
Note: If "enable speed controller" is withdrawn, then an existing brake will be closed.
If "enable speed controller" is withdrawn, the pulses are not suppressed.

p0857 Power unit monitoring time / PU t_mon

VECTOR_G, B_INF

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8760, 8864, 8964
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
100.0 [ms]	60000.0 [ms]	6000.0 [ms]

Description: Sets the monitoring time for the power unit.
The following applies for infeeds and drives:
The monitoring time is started after an 0/1 edge of the ON/OFF1 command. If the power unit does not return a READY signal within the monitoring time, then fault F06000 (infeeds) or F07802 (drives) is output.
For drives, the following also applies:
After the pulse enable (operation enabled, p0852), the monitoring time is re-started. If the infeed does not signal ready to the drive within the monitoring time (using binector input p0864 of the drive), fault F07840 is initiated.
Dependency: See also: F06000, F07802, F07840, F30027
Notice: The maximum time to precharge the DC link is monitored in the power unit and cannot be changed. The maximum duration of the precharging depends on the power class and the power unit design.
The monitoring time for the precharging is started after the ON command (BI: p0840 = 0/1 signal). Fault F30027 is output when the maximum precharging duration is exceeded.
Note: The factory setting for p0857 depends on the power class and the design of the power unit.
The monitoring time for the ready signal of the power unit includes the time to precharge the DC link and, if relevant, the de-bounce time of the contactors.
If an excessively low value is entered into p0857, then after enable, this results in the corresponding fault.

p0858[0...n] BI: Unconditionally close holding brake / Uncond close brake

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2501, 2701, 2707
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	10251.13

Description: Sets the signal source for the command "unconditionally close holding brake".
Dependency: See also: p0855

Note: The signal via binector input p0858 "Unconditionally close holding brake" has a higher priority than via binector input p0855 "Unconditionally open holding brake".
For a 1 signal via binector input p0858, the command "unconditionally close the holding brake" is executed and internally a zero setpoint is entered.

p0860 BI: Line contactor feedback signal / Line contact fdbk

VECTOR_G, B_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 2634, 8734, 8834, 8934
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	863.1

Description: Sets the signal source for the feedback signal from the line contactor.
Recommendation: When the monitoring is activated (BI: p0860 not equal to r0863.1), then to control the line contactor, signal BO: r0863.1 of its own drive object should be used.
Dependency: See also: p0861, r0863
See also: F07300
Notice: The line contactor monitoring is deactivated if the control signal of the particular drive object is set as the signal source for the feedback signal of the line contactor (BI: p0860 = r0863.1).
Note: The state of the line contactor is monitored depending on signal BO: r0863.1.
When the monitoring is activated (BI: p0860 not equal to r0863.1), fault F07300 is then also output if the contactor is closed before it is controlled using r0863.1.

p0861 Line contactor monitoring time / Line cont t_mon

VECTOR_G, B_INF

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2634, 8734, 8834, 8934
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	5000 [ms]	100 [ms]

Description: Sets the monitoring time of the line contactor.
This time starts each time that the line contactor switches (r0863.1). If a feedback signal is not received from the line contactor within the time, a message is output.
Dependency: See also: p0860, r0863
See also: F07300
Note: The monitoring function is disabled for the factory setting of p0860.

p0862 Power unit ON-delay / PU t_on

VECTOR_G, B_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2610, 8732, 8832, 8932
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	65000 [ms]	0 [ms]

Description: Sets the delay time for the control command of the power unit and a line contactor, if used.
Note: This means that it is possible to realize a shifted (delayed) precharging or switch-on using a single ON command.
When the infeed units are active, before the line contactor is closed, an offset adjustment of the current measurement is carried out for a duration of 120 ms (p3491).

r0863.0...2 CO/BO: Drive coupling status word/control word / CoupleZSW/STW

VECTOR_G, B_INF

Can be changed: -
Calculated: -
Access level: 2
Data type: Unsigned16
Dyn. index: -
Function diagram: -
P group: Commands
Unit group: -
Unit selection: -
Not for motor type: -
Scaling: -
Expert list: 1
Min:
Max:
Factory setting:
-
-
-

Description: Display and BICO output for the status word and control word of the drive coupling.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Closed-loop control operation	Yes	No	2610, 8710, 8810, 8910
01	Energize contactor	Yes	No	2610, 2634, 7990, 8734, 8834, 8934
02	Infeed line supply failure	Yes	No	-

Dependency: See also: p0864

Note: For bit 00:
Bit 0 signals that the infeed is ready.
When the operating signal is transferred via binector output r0863.0 this allows several drives to start (run-up) staggered over time when they are simultaneously switched on.
To realize this, the following connections/interconnections are required:
Drive 1: Interconnect binector input p0864 with binector output r0863.0 of the infeed
Drive 2: Interconnect binector input p0864 with binector output r0863.0 of drive 1
Drive 3: Interconnect binector input p0864 with binector output r0863.0 of drive 2 etc.
The first drive only transfers the operating signal to the next drive after it has reached its ready condition.
For bit 01:
Bit 1 is used to control an external line contactor.
For bit 02:
This bit only signals line supply failure for Active Infeed (A_INF) and Smart Infeed (S_INF).

p0864 BI: Infeed operation / INF operation

VECTOR_G

Can be changed: T
Calculated: -
Access level: 2
Data type: Unsigned32 / Binary
Dyn. index: -
Function diagram: 2610, 8710, 8910
P group: Commands
Unit group: -
Unit selection: -
Not for motor type: -
Scaling: -
Expert list: 1
Min:
Max:
Factory setting:
-
-
0

Description: Sets the signal source for the operating signal of the infeed (e.g. BO: r0863.0).

Dependency: See also: r0863

Note: The sequence control of a servo/vector drive requires this signal.
The following applies for an infeed without DRIVE-CLiQ:
For these infeeds, the "ready" message is available via an output terminal. This signal must be connected to a digital input. The drives supplied from this infeed must use this signal as ready signal (BI: p0864 = digital input).

p0867 Power unit main contactor holding time after OFF1 / PU t_MC after OFF1

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [ms]	5000.0 [ms]	50.0 [ms]

Description: Sets the main contactor holding time after OFF1

After withdrawing the OFF1 enable (signal source of p0840), the main contactor is only opened after the main contactor holding time has elapsed.

Recommendation: When operating a drive connected to SINUMERIK, which only closes the main contactor with the OFF1 command (blocksize, chassis), p0867 should be set as a minimum to 50 ms.

Dependency: See also: p0869

Note: For p0869 = 1 (keep main contactor closed for STO), after withdrawing STO, the switching on inhibited must be acknowledged via the signal source of p0840 = 0 (OFF1) – and before the main contactor holding time expires, should go back to 1, otherwise the main contactor will open.

p0868 Power unit debounce time/wait time / PU t_debnc/t_wait

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	65000 [ms]	65000 [ms]

Description: Sets the debounce time or wait time for the power unit.

The following applies for "Chassis" format Motor Modules:

- sets the debounce time for the DC circuit breaker.

The following applies for "Chassis" format AC/AC converters:

- sets the wait time for the thyristor rectifier.

Note: The following applies if p0868 = 65000 ms:

The debounce time defined internally in the power unit's EEPROM is implemented.

p0869 Sequence control configuration / Seq_ctrl config

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 bin

Description: Sets the configuration for the sequence control.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Keep main contactor closed for STO	Yes	No	-

Dependency: See also: p0867

Note: STO: Safe Torque Off

For bit 00:

After withdrawing the OFF1 enable (signal source of p0840), the main contactor is opened after the main contactor holding time has elapsed.

For p0869.0 = 1, after withdrawing STO, the switching on inhibited must be acknowledged via the signal source of p0840 = 0 (OFF1) – and before the main contactor holding time expires (p0867), should go back to 1, otherwise the main contactor will open.

p0869 Sequence control configuration / Seq_ctrl config

B_INF

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dyn. index:** - | **Function diagram:** 8732, 8832, 8932
P group: Commands | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0000 bin

Description: Sets the configuration for the sequence control.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
01	Wait for the feedback signal from the external main contactor	Yes	No	8732, 8832, 8932

Notice: For chassis units, the following applies:
Setting p0869.1 = 1 is not permissible, if, using p0860 the internal circuit breaker is monitored (this is not controlled with r0863.1).

Note: For bit 01:
For p0869.1 = 1, before starting to charge the DC link (r0899.8 = 1), the system waits for a feedback signal from the external main contactor (p0860 = 1 signal). The main contactor must be controlled using r0863.1.
Waiting for the contactor feedback signal is especially necessary if the external main contactor has long switching times, which would lead to the precharging time being exceeded (F06000, F30027).

p0870 BI: Close main contactor / Close main cont

VECTOR_G

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Unsigned32 / Binary | **Dyn. index:** - | **Function diagram:** -
P group: Commands | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0

Description: Sets the signal source to close the main contactor.

Note: The main contactor is also closed when the converter is switched on after issuing the necessary enable signals.
A binector input p0870 = 1 signal prevents the main contactor from being opened when enable signals are withdrawn.

r0873 CO/BO: Infeed total operation / INF total op

B_INF

Can be changed: - | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dyn. index:** - | **Function diagram:** 8732, 8832
P group: Commands | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | -

Description: Displays the operational readiness of the infeeds when using Smart Line Module (SLM) and Basic Line Module (BLM) together (mixed operation).
In order that signal BO: r0873 is available at one of the infeeds, then BI: p0874 of the one infeed must be interconnected to BO: r0863.0 of the other infeed.

Dependency: See also: r0863, p0874

Note: Mixed operation is not possible with the Active Line Module (ALM)!

p0874 BI: Smart/ Basic Line Module operation / SLM/BLM operation

B_INF

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 8732, 8832
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Setting to interconnect the ready signal for mixed operation of Smart Line Module (SLM) and Basic Line Module (BLM).

In order that signal BO: r0873 is available at one of the infeeds, then BI: p0874 of the one infeed must be interconnected to BO: r0863.0 of the other infeed.

Dependency: See also: r0863, r0873

Note: Mixed operation is not possible with the Active Line Module (ALM)!

p0894 Parking pre-setting / Parking pre-set

VECTOR_G, ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 bin

Description: Pre-setting for the "Parking axis" and "Parking encoder" function.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Default with interconnection	Park	Do not park	-

Dependency: See also: p0480, p0897

Note: For bit 00:

If there is at least one BICO interconnection for "Parking axis" or "Parking encoder", this default setting is taken into consideration during power up.

p0895[0...n] BI: Activate/deactivate power unit components / PU_comp act/deact

VECTOR_G, B_INF

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32 / Binary	**Dyn. index:** PDS, p0120	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source to activate/deactivate a power unit component.

Dependency: BI: p0895 = 0 signal

Deactivate power unit components.

BI: p0895 = 1 signal

Activate power unit components

See also: p0125, r0126

See also: A05054

Caution: It is not permissible to deactivate drive objects with safety functions enabled.

Notice: For Active Line Modules in the "Chassis" format, the Voltage Sensing Module (VSM, p0145) belonging to the power unit is automatically activated/deactivated.

Note: The power unit is only deactivated when the pulses are suppressed.

For units connected in parallel, when one of the power units is deactivated, then the enable in p7001 is withdrawn.

r0896.0 BO: Parking axis, status word / Parking axis, ZSW

VECTOR_G

Can be changed: - **Calculated:** - **Access level:** 2
Data type: Unsigned8 **Dyn. index:** - **Function diagram:** -
P group: Displays, signals **Unit group:** - **Unit selection:** -

P group: Displays, signals **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1
Min: **Max:** **Factory setting:**
- - -

Description: Display and BICO output for the status word of the sequence control.

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	Ready for switching on	Yes	No	-
	01	Ready	Yes	No	-
	02	Operation enabled	Yes	No	-
	03	Jog active	Yes	No	-
	04	No coasting active	OFF2 inactive	OFF2 active	-
	05	No Quick Stop active	OFF3 inactive	OFF3 active	-
	06	Switching on inhibited active	Yes	No	-
	07	Drive ready	Yes	No	-
	08	Controller enable	Yes	No	-
	09	Control request	Yes	No	-
	11	Pulses enabled	Yes	No	-
	12	Open holding brake	Yes	No	-
	13	Command close holding brake	Yes	No	-
	14	Pulse enable from the brake control	Yes	No	-
	15	Setpoint enable from the brake control	Yes	No	-

Note: For bits 00, 01, 02, 04, 05, 06, 09:
For PROFIdrive, these signals are used for status word 1.
For bit 13:
When the "Safe Brake Control" (SBC) is activated and selected, the brake is no longer controlled using this signal.
For bit 14, 15:
These signals are only of significance when the "extended brake control" function module is activated (r0108.14 = 1).

r0899.0...12 CO/BO: Status word sequence control infeed / ZSW seq_ctrl INF

B_INF

Can be changed: - **Calculated:** - **Access level:** 2

Note: For bits 00, 01, 02, 04, 06, 09:
For PROFIdrive, these signals are used for status word 1.

r0899.7...9 CO/BO: Status word sequence control encoder DO / ZSW seq_ctrl encDO

ENC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the status word for sequence control on the encoder drive object.

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	07	Drive ready	Yes	No	-
	09	Control request	Yes	No	-

Note: For PROFIdrive, this signal is used for status word ZSW2_ENC.

p0918 PROFIBUS address / PB address

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 2401, 2410
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	126	126

Description: Displays or sets the PROFIBUS address for PROFIBUS interface on the Control Unit.
The address can be set as follows:
1) Using the address switch on the Control Unit.
--> p0918 can then only be read and displays the selected address.
--> A change only becomes effective after a POWER ON.
2) Using p0918
--> Only if the address 00 hex, 7F hex, 80 hex, or FF hex has been set using the address switch.
--> The address is saved in a non-volatile fashion using the function "copy from RAM to ROM".
--> A change only becomes effective after a POWER ON.

Note: Permissible PROFIBUS addresses: 1 ... 126 (01 hex ... 7E hex)
Address 126 is used for commissioning.
Every PROFIBUS address change only becomes effective after a POWER ON.
The parameter is not influenced by setting the factory setting.

p0922 IF1 PROFIdrive PZD telegram selection / IF1 PZD tel

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1

82: SIEMENS telegram 82, PZD-2/7
83: SIEMENS telegram 83, PZD-2/8
999: Free telegram configuration with BICO

Note:
If a value is not equal to 999, and therefore a telegram is set, then interconnections in the telegram are inhibited.
The inhibited interconnections can only be changed again after setting value 999.

r0924[0...1] ZSW bit pulses enabled / ZSW pulse enab

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 2454, 2456
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description:
Displays the position of the "Pulses enabled" status signal in the PROFIdrive telegram.

Index: [0] = Signal number
[1] = Bit position

p0925 PROFIdrive clock synchronous sign-of-life tolerance / PD SoL_tol

VECTOR_G (n/M), ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 2410
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	1

Description: Sets the number of tolerated consecutive sign-of-life errors of the isochronous master.
The sign-of-life signal is normally received in PZD4 (control word 2) from the master.

Dependency: See also: p2045, r2065
See also: F01912

Note: The sign-of-life monitoring is disabled for p0925 = 65535.

r0930 PROFIdrive operating mode / PD operating mode

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the operating mode.
1: Closed-loop speed controlled operation with ramp-function generator
2: Closed-loop position controlled operation
3: Closed-loop speed controlled operation without ramp-function generator

r0944 CO: Counter for fault buffer changes / Fault buff change

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and connector output for the counter for changes of the fault buffer.
This counter is incremented every time the fault buffer changes.

Recommendation: Used to check whether the fault buffer has been read out consistently.

Dependency: See also: r0945, r0947, r0948, r0949, r2109

r0945[0...63] Fault code / Fault code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8050, 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the numbers of faults that have occurred.

Dependency: See also: r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3120, r3122

Notice: The properties of the fault buffer should be taken from the corresponding product documentation.

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
Fault buffer structure (general principle):
r0945[0], r0949[0], r0948[0], r2109[0], r3115[0] --> actual fault case, fault 1
. . .
r0945[7], r0949[7], r0948[7], r2109[7], r3115[7] --> actual fault case, fault 8
r0945[8], r0949[8], r0948[8], r2109[8], r3115[8] --> 1st acknowledged fault case, fault 1
. . .
r0945[15], r0949[15], r0948[15], r2109[15], r3115[15] --> 1st acknowledged fault case, fault 8
. . .
r0945[56], r0949[56], r0948[56], r2109[56], r3115[56] --> 7th acknowledged fault case, fault 1
. . .
r0945[63], r0949[63], r0948[63], r2109[63], r3115[63] --> 7th acknowledged fault case, fault 8

r0946[0...65534] Fault code list / Fault code list

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Lists the fault codes stored in the drive unit.
The indices can only be accessed with a valid fault code.
Example:
r0946[0...999] = 0 --> fault code 0 ... 999 is not available
r0946[1000] = 1000 --> fault code 1000 is available
r0946[1001] = 1001 --> fault code 1001 is available
...
r0946[1008] = 0 --> fault code 1008 is not available
...

Dependency: The parameter assigned to the fault code is entered in r0951 under the same index.

r0947[0...63] Fault number / Fault number

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8050, 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: This parameter is identical to r0945.

r0948[0...63] Fault time received in milliseconds / t_fault recv ms

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 8050, 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the fault occurred.
Dependency: See also: r0945, r0947, r0949, r2109, r2114, r2130, r2133, r2136, r3115, r3120, r3122
Notice: The time comprises r2130 (days) and r0948 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.
When the parameter is read via PROFIdrive, the TimeDifference data type applies.

r0949[0...63] Fault value / Fault value

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Function diagram:** 8050, 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays additional information about the fault that occurred (as integer number).

Dependency: See also: r0945, r0947, r0948, r2109, r2130, r2133, r2136, r3115, r3120, r3122

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.

p0952 Fault cases counter / Fault cases qty

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 6700, 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: Number of fault situations that have occurred since the last reset.

Dependency: The fault buffer is deleted (cleared) by setting p0952 to 0.
In order that faults with "POWER ON" acknowledgment can also be cleared from the fault buffer, POWER ON must first be carried out.
See also: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136

r0963 PROFIBUS baud rate / PB baud rate

CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	255	-

Description: Displays the corresponding value for the PROFIBUS baud rate.

Value:
0: 9.6 kbit/s
1: 19.2 kbit/s
2: 93.75 kbit/s
3: 187.5 kbit/s
4: 500 kbit/s
6: 1.5 Mbit/s
7: 3 Mbit/s
8: 6 Mbit/s
9: 12 Mbit/s
10: 31.25 kbit/s
11: 45.45 kbit/s
255: Unknown

r0964[0...6] Device identification / Device ID

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the device identification.

Index: [0] = Company (Siemens = 42)
[1] = Device type
[2] = Firmware version
[3] = Firmware date (year)
[4] = Firmware date (day/month)
[5] = Number of drive objects
[6] = Firmware patch/hot fix

Note: Example:
r0964[0] = 42 --> SIEMENS
r0964[1] = device type, see below
r0964[2] = 403 --> first part of the firmware version V04.03 (for second part, refer to index 6)
r0964[3] = 2010 --> year 2010
r0964[4] = 1705 --> 17th of May
r0964[5] = 2 --> 2 drive objects
r0964[6] = 200 --> second part, firmware version (complete version: V04.03.02.00)
Device type:
r0964[1] = 5200 --> SINAMICS G150 CU320-2 DP
r0964[1] = 5201 --> SINAMICS G150 CU320-2 PN
r0964[1] = 5210 --> SINAMICS G130 CU320-2 DP
r0964[1] = 5211 --> SINAMICS G130 CU320-2 PN

r0965 PROFIdrive profile number profile version / PD profile nr vers

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the PROFIdrive profile number and profile version.
Constant value = 032A hex.
Byte 1: Profile number = 03 hex = PROFIdrive profile
Byte 2: profile version = 2A hex = 42 dec = version 4.2

Note: When the parameter is read via PROFIdrive, the Octet String 2 data type applies.

p0969 System runtime relative / t_system relative

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 8050, 8060
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	4294967295 [ms]	0 [ms]

Description: Displays the system runtime in ms since the last POWER ON.

Note: The value in p0969 can only be reset to 0.
The value overflows after approx. 49 days.
When the parameter is read via PROFIdrive, the TimeDifference data type applies.

p0970 Reset drive parameters / Drive par reset

VECTOR_G

Can be changed: C2(30)	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Factory settings	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	100	0

Description: The parameter is used to initiate the reset of the parameters of an individual drive object.

Parameters p0100, p0205 (only for VECTOR) and the parameters of the basic drive commissioning (p0009) are not reset (p0107, p0108, p0111, p0112, p0115, p0121, p0130, p0131, p0140, p0141, p0142, p0170, p0186 ... p0189). These can only be reset using the factory setting of the complete drive unit (p0976).

Value:
0: Inactive
1: Start a parameter reset
5: Starts a safety parameter reset
6: Start reset non-safety/safety parameters
100: Start a BICO interconnection reset

Dependency: See also: F01659

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).

At the end of the calculations, p0970 is automatically set to 0.

Parameter reset has been completed if p0970 and p0010 have been set to 0.

For p0970 = 5 the following applies:

The password for Safety Integrated must be set.

When Safety Integrated is enabled, this can result in error messages, which then require an acceptance test to be performed.

Then save the parameters and carry out a POWER ON.

For p0970 = 1 the following applies:

If a Safety Integrated Function is parameterized (p9601), then the safety parameters are not reset. In this case, a fault F01659 is output with fault value 2.

p0970 Reset infeed parameter / INF par reset

B_INF

Can be changed: C2(30)	**Calculated:** -	**Access level:** 2

P group: Factory settings	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	100	0

Description: The parameter is used to initiate a reset of the parameters of an individual infeed unit.

The parameters of the basic commissioning (refer to p0009) are in this case not reset (p0107, p0108, p0121, p0170). These can only be reset using the factory setting of the complete drive unit (p0976).

The sampling times (p0111, p0112, p0115) are only not reset if this results in a conflict with the basic clock cycle (p0110).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).

At the end of the calculations, p0970 is automatically set to 0.

Parameter reset has been completed if p0970 and p0010 have been set to 0.

p0970 TM120 reset parameters / TM120 par reset

TM120

Can be changed: C2(30) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dyn. index:** - | **Function diagram:** -
P group: Factory settings | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 120 (TM120).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Dependency: See also: p0010

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 TM150 reset parameters / TM150 par reset

TM150

Can be changed: C2(30) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dyn. index:** - | **Function diagram:** -
P group: Factory settings | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 150 (TM150).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Dependency: See also: p0010

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 TM31 reset parameters / TM31 par reset

TM31

Can be changed: C2(30) | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dyn. index:** - | **Function diagram:** -
P group: Factory settings | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 31 (TM31).
The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle.
Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Dependency: See also: p0010

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.

p0970 TB30 reset parameters / TB30 par reset

TB30

Can be changed: C2(30) **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dyn. index:** - **Function diagram:** -
P group: Factory settings **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1

Min:	Max:	Factory setting:
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Board 30 (TB30).
The sampling time p4099 is not reset if in so doing a conflict occurs with the basic clock cycle.
Parameter p0161 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.
Parameter reset has been completed if p0970 and p0010 have been set to 0.

p0970 TM54F reset parameters / TM54F par reset

TM54F_MA

Can be changed: C2(30) **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dyn. index:** - **Function diagram:** -
P group: Factory settings **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1

Min:	Max:	Factory setting:
0	100	0

Description: The parameter is used to initiate a reset of the parameters on Terminal Module 54F (TM54F).
Parameter p0151 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Start a parameter reset
5: Starts a safety parameter reset
6: Start reset non-safety/safety parameters
100: Start a BICO interconnection reset

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.
Parameter reset has been completed if p0970 and p0010 have been set to 0.
For p0970 = 5 the following applies:
The password for Safety Integrated must be set.
When Safety Integrated is enabled, this can result in error messages, which then require an acceptance test to be performed.
Then save the parameters and carry out a POWER ON.

p0970 ENCODER reset parameters / ENC par reset

ENC

Can be changed: C2(30) **Calculated:** - **Access level:** 2
Data type: Unsigned16 **Dyn. index:** - **Function diagram:** -
P group: Factory settings **Unit group:** - **Unit selection:** -
Not for motor type: - **Scaling:** - **Expert list:** 1

Min:	Max:	Factory setting:
0	100	0

Description: The parameter is used to initiate the reset of the parameters on the ENCODER drive object.
Parameter p0141 is not reset. It is only reset if the entire drive unit is reset to the factory settings (p0976).

Value:
0: Inactive
1: Start a parameter reset
100: Start a BICO interconnection reset

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: A factory setting run can only be started if p0010 was first set to 30 (parameter reset).
At the end of the calculations, p0970 is automatically set to 0.
Parameter reset has been completed if p0970 and p0010 have been set to 0.

p0971 Save drive object parameters / DO par save

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Factory settings	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Setting to save the parameter of the particular drive object in the non-volatile memory.
When saving, only the adjustable parameters intended to be saved are taken into account.

Value:
0: Inactive
1: Save drive object

Dependency: See also: p0977, p1960, p3845, r3996

Warning: If the Control Unit power supply is switched off while data is being saved, then the backup of all adjustable parameters can be lost, and the Control Unit must be recommissioned.

Notice: The Control Unit power supply may only be switched off after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0).
Writing to parameters is inhibited while saving.
The progress while saving is displayed in r3996.

Note: Starting from the particular drive object, the following parameters are saved:
CU3xx: Device-specific parameters and PROFIBUS device parameters.
Other objects: Parameters of the actual object and PROFIBUS device parameters.
Prerequisite:
Before saving with p0971, all parameters (topology, all drive objects) must have been saved at least once using p0977 = 1.

p0972 Drive unit reset / Drv_unit reset

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: All groups	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	3	0

Description: Sets the required procedure to execute a hardware reset for the drive unit.

Value:
0: Inactive
1: Hardware-Reset immediate
2: Hardware reset preparation
3: Hardware reset after cyclic communication has failed

Danger: It must be absolutely ensured that the system is in a safe condition.
The memory card/device memory of the Control Unit must not be accessed.

Note: If value = 1:
Reset is immediately executed and communications interrupted.
After communications have been established, check the reset operation (refer below).
This value cannot be set in operation.
If value = 2:
Help to check the reset operation.
Firstly, set p0972 = 2 and then read back. Secondly, set p0972 = 1 (it is possible that this request is possibly no longer acknowledged). The communication is then interrupted.
After communications have been established, check the reset operation (refer below).
If value = 3:
The reset is executed after interrupting cyclic communication. This setting is used to implement a synchronized reset by a control for several drive units.
If cyclic communication is not active, then the reset is immediately executed.
If the cyclic communication is active for both PROFIdrive interfaces, then the reset is executed after completing both cycle communications.
After communications have been established, check the reset operation (refer below).
To check the reset operation:
After the drive unit has been restarted and communications have been established, read p0972 and check the following:
p0972 = 0 --> the reset was successfully executed.
p0972 > 0 --> the reset was not executed.

r0975[0...10] Drive object identification / DO identification

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the identification of the drive object.

Index:
[0] = Company (Siemens = 42)
[1] = Drive object type
[2] = Firmware version
[3] = Firmware date (year)
[4] = Firmware date (day/month)
[5] = PROFIdrive drive object type class
[6] = PROFIdrive drive object sub-type Class 1
[7] = Drive object number
[8] = Reserved
[9] = Reserved
[10] = Firmware patch/hot fix

Note: Example:
r0975[0] = 42 --> SIEMENS
r0975[1] = 11 --> SERVO drive object type
r0975[2] = 102 --> first part, firmware version V01.02 (second part, refer to index 10)
r0975[3] = 2003 --> year 2003
r0975[4] = 1401 --> 14th of January
r0975[5] = 1 --> PROFIdrive drive object, type class
r0975[6] = 9 --> PROFIdrive drive object sub-type class 1
r0975[7] = 2 --> drive object number = 2
r0975[8] = 0 (reserved)
r0975[9] = 0 (reserved)
r0975[10] = 600 --> second part, firmware version (complete version: V01.02.06.00)

p0976 Reset and load all parameters / Reset load all par

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(30), C2(30)	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Factory settings	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1013	0

Description: Resets or downloads all parameters of the drive system.

Value:

0: Inactive
1: Start reset of all parameters to factory setting
2: Start dnload of param. saved in non-volatile mem w/ p0977=1
3: Start download of volatile parameters from RAM
10: Start dnload of param. saved in non-volatile mem w/ p0977=10
11: Start dnload of param. saved in non-volatile mem w/ p0977=11
12: Start dnload of param. saved in non-volatile mem w/ p0977=12
20: Start load of param. saved in non-volatile mem w/ p0977=20
21: Start load of param. saved in non-volatile mem w/ p0977=21
22: Start load of param. saved in non-volatile mem w/ p0977=22
23: Start load of param. saved in non-volatile mem w/ p0977=23
24: Start load of param. saved in non-volatile mem w/ p0977=24
25: Start load of param. saved in non-volatile mem w/ p0977=25
26: Start load of param. saved in non-volatile mem w/ p0977=26
30: Start loading the delivery state saved with p0977=30
100: Start resetting of all BICO interconnections
1011: Start dnload of param. saved in volatile mem w/ p0977=1011
1012: Start dnload of param. saved in volatile mem w/ p0977=1012
1013: Start dnload of param. saved in volatile mem w/ p0977=1013

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: After all of the parameters have been reset to their factory setting, the system must be commissioned for the first time again.

Resetting or loading is realized in the non-volatile memory.

Procedure:

1. Set p0009 = 30 (parameter reset).
2. Set p0976 to "required value". The system is run up again.

p0976 is automatically set to 0 and p0009 is automatically set to 1 after this has been carried out.

p0977 Save all parameters / Save all par

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Factory settings	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1013	0

Description: Saves all parameters of the drive system to the non-volatile memory.

When saving, only the adjustable parameters intended to be saved are taken into account.

Value:
0: Inactive
1: Save in non-volatile memory - loaded at POWER ON
10: Save as opt. in non-vol. memory - loaded with p0976=10
11: Save as opt. in non-vol. memory - loaded with p0976=11
12: Save as opt. in non-vol. memory - loaded with p0976=12
20: Save as opt. in non-vol. memory - loaded with p0976=20
21: Save as opt. in non-vol. memory - loaded with p0976=21
22: Save as opt. in non-vol. memory - loaded with p0976=22
23: Save as opt. in non-vol. memory - loaded with p0976=23
24: Save as opt. in non-vol. memory - loaded with p0976=24
25: Save as opt. in non-vol. memory - loaded with p0976=25
26: Save as opt. in non-vol. memory - loaded with p0976=26
30: State when delivered, save in non-volatile memory as setting 30
80: Save in non-volatile memory time-optimized (reserved)
1011: Save in volatile memory, downloaded with p0976=1011
1012: Save in volatile memory, downloaded with p0976=1012
1013: Save in volatile memory, downloaded with p0976=1013

Dependency: See also: p0976, p1960, p3845, r3996

Notice: The Control Unit power supply may only be switched off after data has been saved (i.e. after data save has been started, wait until the parameter again has the value 0).
Writing to parameters is inhibited while saving.
The progress while saving is displayed in r3996.
For p0977 = 30:
The original state when delivered is overwritten when executing this memory function.

Note: Parameters saved with p0977 = 10, 11 or 12 can be downloaded again with p0976 = 10, 11 or 12.
The identification and maintenance data (I&M data, p8806 and following) are only saved for p0977 = 1.

p0978[0...n] List of drive objects / List of the DO

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(1)	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: Topology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	255	[0] 1 [1...24] 0

Description: This parameter is an image of p0101 in conformance with PROFIdrive.
Parameters p0101 and p0978 contain the following information:
1) The same number of drive objects
2) The same drive objects
In this sense, they are consistent.
Difference between p0101 and p0978:
p0978 can be re-sorted and a zero inserted in order to identify those drive objects that participate in the process data exchange and to define their sequence in the process data exchange. Drive objects that are listed after the first zero, are excluded from the process data exchange.
For p0978, in addition, the value 255 can be inserted a multiple number of times.
p0978[n] = 255 means: The drive object is visible for the PROFIBUS master and is empty (without any actual process data exchange). This allows cyclic communications of a PROFIBUS master with unchanged configuring to the drive units with a lower number of drive objects.

Dependency: See also: p0101, p0971, p0977

Note: p0978 cannot be changed when the drive system is commissioned for the first time. The reason for this is that at this time the actual topology has still not been acknowledged (p0099 is still not equal to r0098 and p0009 is set to 0).

r0979[0...30] PROFIdrive encoder format / PD encoder format

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3

P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays those parameters with a value other than the factory setting for this drive.
Dependency: See also: r0990, r0999
Note: Modified parameters are displayed in indices 0 to 98. If an index contains the value 0, then the list ends here. In a long list, index 99 contains the parameter number at which position the list continues.
This list consists solely of the following parameters:
r0990[0...99], r0991[0...99] ... r0999[0...99]
The parameters in this list are not displayed in the expert list of the commissioning tool. However, they can be read from a higher-level control system (e.g. PROFIBUS master).

r0999[0...99] List of modified parameters 10 / List chang par 10

All objects

Description: Displays those parameters with a value other than the factory setting for this drive.
Dependency: See also: r0990, r0991
Note: Modified parameters are displayed in indices 0 to 98. If an index contains the value 0, then the list ends here.
This list consists solely of the following parameters:
r0990[0...99], r0991[0...99] ... r0999[0...99]
The parameters in this list are not displayed in the expert list of the commissioning tool. However, they can be read from a higher-level control system (e.g. PROFIBUS master).

p1000[0...n] Macro Connector Inputs (CI) for speed setpoints / Macro CI n_set

VECTOR_G

Can be changed: C2(1), T | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dyn. index:** CDS, p0170 | **Function diagram:** -
P group: Commands | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
0 | 999999 | 0

Description: Runs the corresponding macro files.
The Connector Inputs (CI) for the speed setpoints of the appropriate Command Data Set (CDS) are appropriately interconnected.
The selected macro file must be available on the memory card/device memory.
Example:
p1000 = 6 --> the macro file PM000006.ACX is run.

Dependency: See also: p0015, p0700, p1500, r8572

Notice: No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!
When executing a specific macro, the corresponding programmed settings are made and become active.

Note: The macros in the specified directory are displayed in r8572. r8572 is not in the expert list of the commissioning tool.
Macros available as standard are described in the technical documentation of the particular product.
CI: Connector Input

p1001[0...n] CO: Fixed speed setpoint 1 / n_set_fix 1

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 2

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for selecting the fixed speed setpoint.

Dependency: Selects the required fixed speed setpoint using p1020 ... p1023.
Displays the number of the actual fixed speed setpoint in r1197.
Sets the values for the fixed speed setpoints 1 ... 15 using p1001 ... p1015.
See also: p1020, p1021, p1022, r1197

Note: If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).

r1024 CO: Fixed speed setpoint effective / n_set_fix eff

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 3001, 3010, 3011
	P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the selected and active fixed speed setpoint.
This setpoint is the output value for the fixed speed setpoints and must be appropriately interconnected (e.g. with the main setpoint).

Recommendation: Interconnect the signal with the main setpoint (CI: p1070 = r1024).

Dependency: Selects the required fixed speed setpoint using p1020 ... p1023.
Displays the number of the actual fixed speed setpoint in r1197.
Sets the values for the fixed speed setpoints 1 ... 15 using p1001 ... p1015.
See also: p1070, r1197

Note: If a fixed speed setpoint has not been selected (p1020 ... p1023 = 0, r1197 = 0), then r1024 = 0 (setpoint = 0).

p1030[0...n] Motorized potentiometer configuration / MoP configuration

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Function diagram:** 3020
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0000 0110 bin

Description: Sets the configuration for the motorized potentiometer.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Data save active	Yes	No	-
01	Automatic mode ramp-function generator active	Yes	No	-
02	Initial rounding-off active	Yes	No	-
03	Non-volatile saving active	Yes	No	-
04	Ramp-function generator always active	Yes	No	-

Notice: The following prerequisites must be fulfilled in order to be able to save the setpoint (Bit 03 = 1) in a non-volatile fashion:
- Firmware with V2.3 or higher.
- Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).

Note: For bit 00:

0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p1040.

1: The setpoint for the motorized potentiometer is saved after OFF and after ON set to the saved value. In order to save in a non-volatile fashion, bit 03 should be set to 1.

For bit 01:

0: Without ramp-function generator in the automatic mode (ramp-up/ramp-down time = 0).

1: With ramp-function generator in the automatic mode.

For manual operation (0 signal via BI: p1041), the ramp-function generator is always active.

For bit 02:

0: Without initial rounding-off

1: With initial rounding-off. The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed).

The jerk for the initial rounding-off is independent of the ramp-up time and only depends on the selected maximum speed (p1082). It is calculated as follows:

r = 0.01 % * p1082 [1/s] / 0.13^2 [s^2]

The jerk acts up until the maximum acceleration is reached (a_max = p1082 [1/s] / p1047 [s]), and then the drive continues to run linearly with a constant rate of acceleration. The higher the maximum acceleration (the lower that p1047 is), the longer the ramp-up time increases with respect to the set ramp-up time.

For bit 03:

0: Non-volatile data save deactivated.

1: The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for bit 00 = 1).

For bit 04:

When the bit is set, the ramp-function generator is computed independent of the pulse enable. The actual output value of the motorized potentiometer is always in r1050.

p1035[0...n] BI: Motorized potentiometer setpoint raise / MoP raise

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2505, 3020
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to continually increase the setpoint for the motorized potentiometer.

The setpoint change (CO: r1050) depends on the set ramp-up time (p1047) and the duration of the signal that is present (BI: p1035).

Dependency: See also: p1036

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1036[0...n] BI: Motorized potentiometer lower setpoint / MoP lower

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2505, 3020
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to continuously lower the setpoint for the motorized potentiometer.

The setpoint change (CO: r1050) depends on the set ramp-down time (p1048) and the duration of the signal that is present (BI: p1036).

Dependency: See also: p1035

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1037[0...n] Motorized potentiometer maximum speed / MoP n_max

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3020
	P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]

Description: Sets the maximum speed/velocity for the motorized potentiometer.

Note: This parameter is automatically pre-assigned in the commissioning phase.
The setpoint output from the motorized potentiometer is limited to this value.

p1038[0...n] Motorized potentiometer minimum speed / MoP n_min

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3020
	P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]

Description: Sets the minimum speed/velocity for the motorized potentiometer.

Note: This parameter is automatically pre-assigned in the commissioning phase.
The setpoint output from the motorized potentiometer is limited to this value.

p1039[0...n] BI: Motorized potentiometer inversion / MoP inv

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 3020
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to invert the minimum speed/velocity or the maximum speed/velocity for the motorized potentiometer.

Dependency: See also: p1037, p1038

Note: The inversion is only active during "motorized potentiometer raise" or "motorized potentiometer lower".

p1040[0...n] Motorized potentiometer starting value / MoP start value

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3020
	P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-210000.000 [rpm]	210000.000 [rpm]	0.000 [rpm]

Description: Sets the starting value for the motorized potentiometer. This starting value becomes effective after the drive has been switched on.

Dependency: Only effective if p1030.0 = 0.
See also: p1030

p1041[0...n] BI: Motorized potentiometer manual/automatic / MoP manual/auto

VECTOR_G

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dyn. index:** CDS, p0170 | **Function diagram:** 3020
P group: Setpoints | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0

Description: Sets the signal source to change over from manual to automatic when using a motorized potentiometer.
In the manual mode, the setpoint is changed using two signals - raise and lower. In the automatic mode, the setpoint must be interconnected via a connector input.
Dependency: See also: p1030, p1035, p1036, p1042
Note: The effectiveness of the internal ramp-function generator can be set in automatic mode.

p1042[0...n] CI: Motorized potentiometer automatic setpoint / MoP auto setpoint

VECTOR_G

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / FloatingPoint32 | **Dyn. index:** CDS, p0170 | **Function diagram:** 3020
P group: Setpoints | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** p2000 | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0

Description: Sets the signal source for the setpoint of the motorized potentiometer in the automatic mode.
Dependency: See also: p1041

p1043[0...n] BI: Motorized potentiometer accept setting value / MoP acc set val

VECTOR_G

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 / Binary | **Dyn. index:** CDS, p0170 | **Function diagram:** 3020
P group: Setpoints | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0

Description: Sets the signal source to accept the setting value for the motorized potentiometer.
Dependency: See also: p1044
Note: The setting value (CI: p1044) becomes effective for a 0/1 edge of the setting command (BI: p1043).

p1044[0...n] CI: Motorized potentiometer setting value / MoP set val

VECTOR_G

Can be changed: T | **Calculated:** - | **Access level:** 3

Unit group: -
Unit selection: -
Not for motor type: -
Scaling: -
Expert list: 1

Min:	Max:	Factory setting:
0.000 [s]	1000.000 [s]	10.000 [s]

Description: Sets the ramp-down time for the internal ramp-function generator for the motorized potentiometer.
The setpoint is changed from the speed/velocity limit (p1082) to zero within this time (if no initial rounding-off has been activated).
Dependency: See also: p1030, p1047, p1082
Note: The deceleration time is extended corresponding to the activated initial rounding-off (p1030.2).

r1050 CO: Motorized potentiometer setpoint after ramp-function generator / MoP set after RFG

VECTOR_G

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 3001, 3020
P group: Setpoints
Unit group: 3_1
Unit selection: p0505
Not for motor type: -
Scaling: p2000
Expert list: 1

Min:	Max:	Factory setting:
- [rpm]	- [rpm]	- [rpm]

Description: Sets the effective setpoint after the internal motorized potentiometer ramp-function generator.
This setpoint is the output value of the motorized potentiometer and must be appropriately interconnected onwards (e.g. with the main setpoint).
Recommendation: Interconnect the signal with main setpoint (p1070).
Dependency: See also: p1070
Note: For "With ramp-function generator", after an OFF1, OFF2, OFF3 or for a 0 signal via BI: p0852 (inhibit operation, suppress pulses) the ramp-function generator output (r1050) is set to the starting value (configuration via p1030.0).

Description: Displays the effective supplementary setpoint. The value shown is the additional setpoint after scaling.

r1078 CO: Total setpoint effective / Total setpoint eff

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 3030
	P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the total effective setpoint.
The value indicates the sum of the effective main setpoint and supplementary setpoint.

p1079 Interpolator clock cycle for speed setpoints / Interp_cyc n_set

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [ms]	127.00 [ms]	0.00 [ms]

Description: Sets the time with which new speed setpoints are interpolated.
With interpolation, the higher-level control adapts the speed setpoint steps to the time grid of the setpoint channel.

Recommendation: For non-synchronous operation, a setting to the maximum time difference between two setpoints is recommended.
For sensorless vector control, interpolation should always be activated if the ramp-up and ramp-down times of the ramp-function generator are very short. The drive must be able to follow the external speed setpoint (the drive does not ramp up at the torque limit).

Note: For acceleration precontrol of the speed controller, interpolation prevents torque peaks from occurring if the ramp-up or ramp-down times in the setpoint channel are zero.
When exiting commissioning, the parameter is preset using the automatic calculation if, as setpoint source for the main or supplementary setpoint, a PZD receive word is already set and the ramp-up time is zero.
Interpolation is limited to 127 cycles of the setpoint channel.
p1079 = 0 ms:
Interpolation is deactivated.
p1079 = 0.01 ms:
The interpolation time is automatically determined the first time that the speed setpoint is changed. After this, no other changes are made if the send times of the external control increase. Writing to p1079 again initiates the automatic adaptation of the interpolation time.
p1079 > 0.01 ms:
Interpolation is performed corresponding to the ratio to the computation clock cycle.
For a value of 0, for synchronized setpoint input, the currently valid application clock cycle is loaded.

p1080[0...n] Minimum speed / n_min

VECTOR_G	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3050
	P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [rpm]	19500.000 [rpm]	0.000 [rpm]

Description: Sets the lowest possible motor speed.
This value is not undershot in operation.

Dependency: See also: p1106

Notice: The effective minimum speed is formed from p1080 and p1106.

Note: The parameter value applies for both motor directions.

In exceptional cases, the motor can operate below this value (e.g. when reversing).

In order that a stationary motor – after all of the enable signals have been switched on, can operate at the minimum speed/minimum velocity once all of the enable signals are available, the direction must be entered using one of the following options:

- direction input via small setpoint.
- direction input by inhibiting the negative or positive direction (p1110, p1111).

p1081 Maximum speed scaling / n_max scal

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 3050, 3095
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
100.00 [%]	105.00 [%]	100.00 [%]

Description: Sets the scaling for the maximum speed (p1082).

For a higher-level speed control, this scaling allows the maximum speed to be briefly exceeded.

Dependency: See also: p1082

Notice: Continuous operation above a scaling of 100 % is not permitted.

p1082[0...n] Maximum speed / n_max

VECTOR_G

Can be changed: C2(1), T	**Calculated:** CALC_MOD_ALL	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 2820, 3020, 3050, 3060, 3070, 3095
P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [rpm]	210000.000 [rpm]	1500.000 [rpm]

Description: Sets the highest possible speed.

Dependency: For vector control (p1300 = 20 ... 23) the maximum speed is limited to 60.0 / (8.333 x p0115[0] x r0313). This can be identified by a reduction in r1084. p1082 is not changed in this process due to the fact that the operating mode p1300 can be changed over.

If a sine-wave filter (p0230 = 3) is parameterized as output filter, then the maximum speed is limited corresponding to the maximum permissible filter output frequency (refer to the filter data sheet). When using sine-wave filters (p0230 = 3, 4), the maximum speed r1084 is limited to 70% of the resonant frequency of the filter capacitance and the motor leakage inductance.

For reactors and dU/dt filters, it is limited to 150 Hz * 60 / r0313 (for chassis power units) or 120 Hz x 60 / r0313 (for booksize power units).

See also: p0115, p0230, r0313, p0322, p0324, r0336, p0532

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: The parameter applies for both motor directions.

The parameter has a limiting effect and is the reference quantity for all ramp-up and ramp-down times (e.g. down ramps, ramp-function generator, motor potentiometer).

Since the parameter is part of quick commissioning (p0010 = 1), it is defined appropriately when p0310, p0311, p0322, p0324, p0530, p0531, and p0532 are changed.

p1082 <= min(p0324, p0532) if p0324 > 0 and p0532 > 0

p1082 <= p0322, if p0324 = 0 or p0532 = 0 and p0322 > 0

p1082 <= 60 x minimum (15 x r0336, 650 Hz) / r0313

p1082 <= 60 x Maximum power unit pulse frequency / (k x r0313)

k = 12 for vector control (r0108.2 = 1), k = 6.5 for U/f control (r0108.2 = 0)

For the automatic calculation (p0340 = 1) the value of the parameter is pre-assigned the maximum motor speed (p0322). If p0322 = 0, the rated motor speed (p0311) is used as default (pre-assignment) value. For induction motors that are not catalog motors (p0301 = 0), the synchronous no-load speed is used as default (pre-assignment) value (p0310 x 60 / r0313).

For synchronous motors, the following additionally applies:

The maximum speed p1082 is restricted to speeds (r1084) where the EMF does not exceed the DC link voltage.

The effective assignment of the motor data set parameter (e.g. p0311) to the drive data set parameter p1082 when pre-assigning should be taken from p0186.

p1082 is also available in the quick commissioning (p0010 = 1); this means that when exiting via p3900 > 0, the value is not changed.

p1083[0...n] CO: Speed limit in positive direction of rotation / n_limit pos

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3050, 6732

Min:	**Max:**	**Factory setting:**
0.000 [rpm]	210000.000 [rpm]	0.000 [rpm]

Description: Sets skip speed 4.
Dependency: See also: p1091, p1092, p1093, p1101
Notice: Skip bandwidths can also become ineffective as a result of the downstream limits in the setpoint channel.

p1098[0...n] CI: Skip speed scaling / n_skip scal

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 3050
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for scaling the skip speeds.
Dependency: See also: p1091, p1092, p1093, p1094

r1099.0 CO/BO: Skip band status word / Skip band ZSW

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the skip bands.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	r1170 within the skip band	Yes	No	3050

Dependency: See also: r1170
Note: For bit 00:
With the bit set, the setpoint speed is within the skip band after the ramp-function generator (r1170).
The signal can be used to switch over the drive data set (DDS).

p1101[0...n] Skip speed bandwidth / n_skip bandwidth

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3050
	P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [rpm]	210000.000 [rpm]	0.000 [rpm]

Description: Sets the bandwidth for the skip speeds/velocities 1 to 4.

Dependency: See also: p1091, p1092, p1093, p1094

Note: The setpoint (reference) speeds are skipped (suppressed) in the range of the skip speed +/-p1101.

Steady-state operation is not possible in the skipped (suppressed) speed range. The skip (suppression) range is skipped.

Example:

p1091 = 600 and p1101 = 20

--> setpoint speeds between 580 and 620 [rpm] are skipped.

For the skip bandwidths, the following hysteresis behavior applies:

For a setpoint speed coming from below, the following applies:

r1170 < 580 [rpm] and 580 [rpm] <= r1114 <= 620 [rpm] --> r1119 = 580 [rpm]

For a setpoint speed coming from above, the following applies:

r1170 > 620 [rpm] and 580 [rpm] <= r1114 <= 620 [rpm] --> r1119 = 620 [rpm]

p1106[0...n] CI: Minimum speed signal source / n_min s_s

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 3050
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for lowest possible motor speed.

Dependency: See also: p1080

Notice: The effective minimum speed is formed from p1080 and p1106.

p1110[0...n] BI: Inhibit negative direction / Inhib neg dir

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2505, 3040
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to disable the negative direction.

Dependency: See also: p1111

p1111[0...n] BI: Inhibit positive direction / Inhib pos dir

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2505, 3040
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to disable the positive direction.

Dependency: See also: p1110

r1112 CO: Speed setpoint after minimum limiting / n_set aft min_lim

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 3050
	P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the speed setpoint after the minimum limiting.
Dependency: See also: p1091, p1092, p1093, p1094, p1101

p1113[0...n] BI: Setpoint inversion / Set inv

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2441, 2442, 2505, 3040
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to invert the setpoint.
Dependency: See also: r1198
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

r1114 CO: Setpoint after the direction limiting / Set after limit

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 3001, 3040, 3050
	P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the speed/velocity setpoint after the changeover and limiting the direction.

p1115 Ramp-function generator selection / RFG selection

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** 3001, 3080
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Sets the ramp-function generator type.
Value:
0: Basic ramp-function generator
1: Extended ramp-function generator
Note: Another ramp-function generator type can only be selected when the motor is at a standstill.

r1119 CO: Ramp-function generator setpoint at the input / RFG set at inp

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 3001, 3050, 3060, 3070, 6300
P group: Setpoints	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [rpm]	- [rpm]	- [rpm]

Description: Displays the setpoint at the input of the ramp-function generator.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The setpoint is influenced by other functions, e.g. skip (suppressed) speeds, minimum and maximum limits.

p1120[0...n] Ramp-function generator ramp-up time / RFG ramp-up time

VECTOR_G

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3060, 3070
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	999999.000 [s]	10.000 [s]

Description: The ramp-function generator ramps-up the speed setpoint from standstill (setpoint = 0) up to the maximum speed (p1082) in this time.

Dependency: See also: p1082, p1138

Note: The ramp-up time can be scaled via connector input p1138.

The parameter is adapted during the rotating measurement (p1960 > 0). This is the reason that during the rotating measurement, the motor can accelerate faster than was originally parameterized.

For U/f control and sensorless vector control (see p1300), a ramp-up time of 0 s does not make sense. The setting should be based on the startup times (r0345) of the motor.

p1121[0...n] Ramp-function generator ramp-down time / RFG ramp-down time

VECTOR_G

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3060, 3070
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	999999.000 [s]	10.000 [s]

Description: Sets the ramp-down time for the ramp-function generator.

The ramp-function generator ramps-down the speed setpoint from the maximum speed (p1082) down to standstill (setpoint = 0) in this time.

Further, the ramp-down time is always effective for OFF1.

Dependency: See also: p1082, p1139

Note: For U/f control and sensorless vector control (see p1300), a ramp-down time of 0 s does not make sense. The setting should be based on the startup times (r0345) of the motor.

p1122[0...n] BI: Bypass ramp-function generator / Bypass RFG

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2505
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for bypassing the ramp generator (ramp-up and ramp-down times = 0).

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

The bypass is kept for OFF1/OFF3.

Note: For VECTOR in encoderless operation, it is not permissible that the ramp-function generator is bypassed.

p1130[0...n] Ramp-function generator initial rounding-off time / RFG t_start_round

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3070
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	30.000 [s]	0.000 [s]

Description: Sets the initial rounding-off time for the extended ramp generator.
The value applies to ramp-up and ramp-down.

Note: Rounding-off times avoid an abrupt response and prevent damage to the mechanical system.

p1131[0...n] Ramp-function generator final rounding-off time / RFG t_end_delay

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3070
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	30.000 [s]	0.000 [s]

Description: Sets the final rounding-off time for the extended ramp generator.
The value applies to ramp-up and ramp-down.

Note: Rounding-off times avoid an abrupt response and prevent damage to the mechanical system.

p1134[0...n] Ramp-function generator rounding-off type / RFG round-off type

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 3070
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Sets the smoothed response to the OFF1 command or the reduced setpoint for the extended ramp-function generator.

Value:
0: Continuous smoothing
1: Discontinuous smoothing

Dependency: No effect up to initial rounding-off time (p1130) > 0 s.

Note: p1134 = 0 (continuous smoothing)
If the setpoint is reduced while ramping-up, initially a final rounding-off is carried out and then the ramp-up completed. During the final rounding-off, the output of the ramp-function generator continues to go in the direction of the previous setpoint (overshoot). After the final rounding-off has been completed, the output goes toward the new setpoint.
p1134 = 1 (discontinuous smoothing)
If the setpoint is reduced while ramping-up, then the output goes immediately in the direction of the new setpoint. For the setpoint change there is no rounding-off.

p1135[0...n] OFF3 ramp-down time / OFF3 t_RD

VECTOR_G

Can be changed: C2(1), U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3060, 3070
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	600.000 [s]	3.000 [s]

Description: Sets the ramp-down time from the maximum speed down to zero speed for the OFF3 command.

Note: This time can be exceeded if the DC link voltage reaches its maximum value.

p1136[0...n] OFF3 initial rounding-off time / RFGOFF3 t_strt_rnd

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3070
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [s]	30.000 [s]	0.000 [s]

Description: Sets the initial rounding-off time for OFF3 for the extended ramp generator.

p1137[0...n] OFF3 final rounding-off time / RFG OFF3 t_end_del

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3070
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [s]	30.000 [s]	0.000 [s]

Description: Sets the final rounding-off time for OFF3 for the extended ramp generator.

p1138[0...n] CI: Ramp-function generator ramp-up time scaling / RFG t_RU scal

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 3060, 3070
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for scaling the ramp-up time of the ramp-function generator.
Dependency: See also: p1120
Note: The ramp-up time is set in p1120.

p1139[0...n] CI: Ramp-function generator ramp-down time scaling / RFG t_RD scal

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 3060, 3070
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for scaling the ramp-down time of the ramp-function generator.
Dependency: See also: p1121
Note: The ramp-down time is set in p1121.

p1140[0...n] BI: Enable ramp-function generator/inhibit ramp-function generator / Enable RFG

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2501
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for the command "enable ramp-function generator/inhibit ramp-function generator".
For the PROFIdrive profile, this command corresponds to control word 1 bit 4 (STW1.4).
BI: p1140 = 0 signal:
Inhibits the ramp-function generator (the ramp-function generator output is set to zero).
BI: p1140 = 1 signal:
Enable ramp-function generator.

Dependency: See also: p1141, p1142

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1141[0...n] BI: Continue ramp-function generator/freeze ramp-function generator / Continue RFG

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2501
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for the command "continue ramp-function generator/freeze ramp-function generator".
For the PROFIdrive profile, this command corresponds to control word 1 bit 5 (STW1.5).
BI: p1141 = 0 signal:
Freezes the ramp-function generator.
BI: p1141 = 1 signal:
Continue ramp-function generator.

Dependency: See also: p1140, p1142

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The ramp-function generator is, independent of the state of the signal source, active in the following cases:
- OFF1/OFF3.
- ramp-function generator output within the suppression bandwidth.
- ramp-function generator output below the minimum speed.

p1142[0...n] BI: Enable setpoint/inhibit setpoint / Setpoint enable

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2501

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for the command "enable setpoint/inhibit setpoint".
For the PROFIdrive profile, this command corresponds to control word 1 bit 6 (STW1.6).
BI: p1142 = 0 signal
Inhibits the setpoint (the ramp-function generator input is set to zero).
BI: p1142 = 1 signal
Setpoint enable.

Dependency: See also: p1140, p1141

Caution: When "master control from PC" is activated, this binector input is ineffective.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: When the function module "position control" (r0108.3 = 1) is activated, this binector input is interconnected as follows as standard:

BI: p1142 = 0 signal

p1143[0...n] BI: Ramp-function generator, accept setting value / RFG accept set val

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 3060, 3070
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for accepting the setting value of the ramp-function generator.

Dependency: The signal source for the ramp-function generator setting value is set using parameters.

See also: p1144

Note: 0/1 signal:

The ramp-function generator output is immediately (without delay) set to the setting value of the ramp-function generator.

1 signal:

The setting value of the ramp-function generator is effective.

1/0 signal:

The input value of the ramp-function generator is effective. The ramp-function generator output is adapted to the input value using the ramp-up time or the ramp-down time.

0 signal:

The input value of the ramp-function generator is effective.

p1144[0...n] CI: Ramp-function generator setting value / RFG setting value

Description: Sets the signal source for the ramp-function generator setting value.

Dependency: The signal source for accepting the setting value is set using parameters.

See also: p1143

p1145[0...n] Ramp-function generator tracking intensity. / RFG track intens

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 3080
	P group: Setpoints	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0	50.0	1.3

Description: Sets the ramp-function generator tracking.

The output value of the ramp-function generator is tracked (corrected) corresponding to the maximum possible drive acceleration.

The reference value is the deviation at the speed/velocity controller input that is necessary to ensure that the motor accelerates at the torque/force limit.

Recommendation: If at least one speed setpoint filter/velocity setpoint filter is activated (p1414), then the ramp-function generator tracking should be deactivated (p1145 = 0.0). When the speed setpoint filter is activated, the output value of the ramp-function generator can no longer be tracked (corrected) corresponding to the maximum possible drive acceleration.

For p1145 = 0.0:

This value deactivates the ramp-function generator tracking.

For p1145 = 0.0 ... 1.0:

Generally, these values are not practical. They cause the motor to accelerate below its torque limit. The lower the selected value, the greater the margin between the controller and torque limit when accelerating.

For p1145 > 1.0:

The greater the value, the higher the permissible deviation between the speed setpoint and speed actual value.

Notice: If ramp-function generator tracking is activated and the ramp time is set too short, this can cause unsteady acceleration.

Remedy:

- deactivate ramp-function generator tracking (p1145 = 0).
- increase the ramp-up/ramp-down time (p1120, p1121).

Note: In the U/f mode, ramp-function generator tracking is not active.

For ramp-function generator tracking and active acceleration model (p1400.20, 23), the integral component of the speed controller should be able to run freely up to the torque limit (p1400.16 = 1).

p1148[0...n] Ramp-function gen. tolerance for ramp-up and ramp-down active / RFG tol HL/RL act

p1151[0...n] Ramp-function generator configuration / RFG config

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: Unsigned16 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: Setpoints | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0000 bin

Description: Sets the configuration for the extended ramp-function generator.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Deactivate rounding-off at the zero cross-over	Yes	No	3070
01	RFG tracking without polarity change	Yes	No	-
02	RFG tracking with polarity change	Yes	No	-

Dependency: For bit 01, 02 = 1:
These bits are only effective when ramp-function generator tracking is activated (p1145 > 0).
When both bits are activated, RFG tracking with polarity change is active.
For bit 01 = 0, bit 02 = 0:
When ramp-function generator tracking is active, the setpoint can only change in the direction of the target setpoint – or be frozen.

Notice: For bit 00 = 1:
If the ramp-up time is longer than the ramp-down time (p1120 > p1121), then there is an acceleration step at the zero crossover. This can have a negative impact on the mechanical system.

Note: For bit 00 = 1:
When the direction change is changed there is no rounding-off before and after the zero crossover.
For bit 01 = 1:
For load surges, the ramp-function generator output tracks the actual value. The tracking (correction) ends at a setpoint of zero.
For bit 02 = 1:
For load surges, the ramp-function generator output tracks the actual value. For a polarity change, the tracking (correction) is continued.

07	Ramp-function generator acceleration positive	Yes	No	-
08	Ramp-function generator acceleration negative	Yes	No	-

Note: For bit 02:
The bit is the result of the OR logic operation - bit 00 and bit 01.

p1200[0...n] Flying restart operating mode / FlyRest op_mode

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 6300
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	6	0

Description: Sets the operating mode for flying restart.
The flying restart allows the drive converter to be switched on while the motor is still rotating. In so doing, the drive converter output frequency is changed until the actual motor speed/velocity is found. The motor then accelerates up to the setpoint at the ramp-function generator setting.

Value:
0: Flying restart inactive
1: Flying restart always active (start in setpoint direction)
2: FlyRestart active after on, fault, OFF2 (start in setp. dir.)
3: FlyRestart active after fault, OFF2 (start in setp. direction)
4: Flying restart always active (start only in setpoint direction)
5: FlyRestart active after on, fault, OFF2 (start only in setp_dir)
6: FlyRestart active after fault, OFF2 (start only in setp. dir.)

Dependency: The ground fault test is only possible when the motor is stationary, and is therefore only realized when flying restart is deactivated (p1200 = 0).
For induction motors, the following applies:
A differentiation is made between flying restart for U/f control and for vector control (p1300).
Flying restart, U/f control: p1202, p1203, r1204
Flying restart, vector control: p1202, p1203, r1205
For synchronous motors, the following applies:
Flying restart is not possible with U/f control or if, in the case of sensorless vector control, a Voltage Sensing Module (VSM) has not been connected and parameterized.
If two VSMs are connected to the Motor Module, then the motor voltage for the flying restart is measured using the second VSM (see p0151[1]).
If only one VSM is connected, then this can be used for the flying restart (p1200) (for induction motors, also see p0247 bit 5). When activating flying restart, line synchronization must be deactivated (p3800 = 0).
See also: p1201
See also: F07330, F07331

Notice: The "flying restart" function must be used in cases where the motor may still be running (e.g. after a brief line supply interruption) or is being driven by the load. The system might otherwise shut down as a result of overcurrent.
It does not make sense to use "flying restart" together with the "motor holding brake function" (p1215 > 0) because then the flying restart will always be realized with the motor stationary.
For a flying restart of induction motors without voltage measurement (VSM) the de-energization time (p0347) must be set long enough so that for fast restarts after a pulse inhibit, excessively high current peaks do not occur.
When operating synchronous reluctance motors and flying restart a motor data identification must first be carried out.

Note: For p1200 = 1, 4, the following applies:
Flying restart is active after faults, OFF1, OFF2, OFF3.
For p1200 = 2, 5, the following applies:
The "switch-on" is the first switching-on operation after the drive system has been booted. This is practical for motors with a high-inertia load.
For p1200 = 1, 2, 3, the following applies: The search is made in both directions.
For reluctance motors, the converter is directly switched to the rotating motor without executing a search routine.
For p1200 = 4, 5, 6, the following applies: The search is only made in the setpoint direction. For a setpoint of zero, a search is not made in the negative direction of rotation.
This selection is not necessary for reluctance motors (see p1200 = 1, 2, 3).
For operation with encoder, the following applies:
p1200 = 1, 4 as well as p1200 = 2, 5 and p1200 = 3, 6 have the same meaning.
For U/f control (p1300 < 20), the following applies:
The speed can only be sensed for values above approx. 5 % of the rated motor speed. For lower speeds, it is assumed that the motor is at a standstill.
If p1200 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1200 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).

p1201[0...n] BI: Flying restart enable signal source / FlyRest enab s_s

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source to enable the "flying restart" function.
Dependency: See also: p1200
Note: Withdrawing the enable signal has the same effect as setting p1200 = 0.

p1202[0...n] Flying restart search current / FlyRest I_srch

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	10 [%]	400 [%]	100 [%]

Description: Sets the search current for the "flying restart" function.
The value is referred to the motor magnetizing current.
For U/f control, it may be necessary to increase the search current (e.g. 120 %) to ensure reliable flying restart.
Fast flying restart for induction motors with voltage model (see r1780.11):
Sets the initial setpoint for the field-generating current component.
Dependency: See also: r0331
Caution: An unfavorable parameter value can result in the motor behaving in an uncontrollable fashion.

Note: In U/f control mode, the parameter serves as a threshold value for establishing the current at the beginning of the flying restart function. When the threshold value is reached, the actual search current is set as a function of the frequency based on the voltage setpoints.

Reducing the search current can also improve flying restart performance (if the system moment of inertia is not very high, for example).

The following applies for a synchronous reluctance motor:

- a parameter change only becomes effective after carrying out the motor data identification.
- the minimum search current is limited (p1202 >= 50 %).
- the search algorithm is optimized for 100%, and the current reached is internally limited. It is possible that a set value (p1202 != 100%) may not be able to be reached.
- if the ratio between motor power and converter power is greater than 1, then it may be advantageous to increase the search current.

p1203[0...n] Flying restart search rate factor / FlyRes v_srch fact

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
10 [%]	4000 [%]	100 [%]

Description: Sets the factor for the search speed for flying restart.

The value influences the rate at which the output frequency is changed during a flying restart . A higher value results in a longer search time.

Recommendation: For sensorless vector control and motor cables longer than 200 m - as well as for du/dt filters (p0230) - the following applies:

p1203 >= 300 %

Caution: An unfavorable parameter value can result in the motor behaving in an uncontrollable fashion.

For vector control, a value that is too low or too high can cause flying restart to become unstable.

Note: The parameter factory setting is selected so that standard induction motors that are rotating can be found and restarted as quickly as possible (fast flying restart).

With this pre-setting, if the motor is not found (e.g. for motors that are accelerated as a result of active loads or with U/f control and low speeds), we recommend that the search rate is reduced (by increasing p1203).

For a fast flying restart with voltage model in the U/f control mode (p1300 < 20) the search duration can be modified using this parameter.

The following applies for a synchronous reluctance motor:

- the minimum search speed is limited (p1203 >= 50 %).

r1204.0...15 CO/BO: Flying restart U/f control status / FlyRest Uf st

VECTOR_G

	Min:	**Max:**	**Factory setting:**
	0	65535	0

Description: Sets faults for which automatic restart should not be effective.

Dependency: The setting is only effective for p1210 = 6, 16.
See also: p1210

p1207 BI: AR connection following drive object / AR connection DO

B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Modifies the precharging monitoring of the infeed.
The active automatic restart (AR) of the following drive object can be interconnected using this binector input (BI: p1207 = r1214.2).
This means that when the automatic restart is operational, the precharging monitoring of the infeed is deactivated and is only re-activated under the following conditions:
- the absolute current in the DC link is greater than 2 % of the maximum current (r0209) of the infeed to provide protection against short-circuit in the DC link.
- if a Voltage Sensing Module (VSM) is being used, the line voltage amplitude is greater than 3 % of the parameterized unit supply voltage (p0210) to protect the precharging resistors against continuous filter current when the line supply partially returns.

Dependency: See also: r0209, p0210, r1214

p1208[0...1] BI: AR modification infeed / AR modification

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to modify the automatic restart (AR).
Interconnections between the automatic restart and infeed:
With the following interconnection in the mode p1210 = 6, the automatic restart can respond to infeed faults:
BI: p1208[0] = r2139.3
With the following interconnection, in the mode p1210 = 4, the automatic restart can respond to line supply failure of the infeed:
BI: p1208[1] = r0863.2

Index: [0] = Infeed fault
[1] = Infeed line supply failure

Dependency: See also: r0863, r2139

p1210 Automatic restart mode / AR mode

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	16	0

Description: Sets the automatic restart mode (AR).

Value:
0: Inhibit automatic restart
1: Acknowledge all faults without restarting
4: Restart after line supply failure w/o additional start attempts
6: Restart after fault with additional start attempts
14: Restart after line supply failure following man. acknowledgment
16: Restart after fault following manual acknowledgment

Recommendation: For brief line supply failures, the motor shaft may still be rotating when restarting. The "flying restart" function (p1200) might need to be activated to restart while the motor shaft is still rotating.

Dependency: The automatic restart requires an active ON command (e.g., via a digital input). If, for p1210 > 1, there is no active ON command, then the automatic restart is interrupted.

When using an Operator Panel in the LOCAL mode, then there is no automatic start.

For p1210 = 14, 16, a manual acknowledgment is required for an automatic restart.

See also: p0840, p0857, p1267

See also: F30003

Danger: ⚠ If the automatic restart is activated (p1210 > 1) if there is an ON command (refer to p0840), the drive is switched on as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic switching-on operation can only be interrupted by withdrawing the ON command.

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1). When faults are present, therefore, the parameter cannot be changed.

For p1210 > 1, the motor is automatically started.

Note: For p1210 = 1:

Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgment, then these are also automatically acknowledged again. p1211 has no influence on the number of acknowledgment attempts.

For p1210 = 4:

An automatic restart is only carried out if fault F30003 occurred at the Motor Module or a 1 signal is present at binector input p1208[1]. If additional faults are present, then these faults are also acknowledged and when successful, starting continues. If the 24 V Control Unit power supply fails, then this is interpreted as a line supply failure.

For p1210 = 6:

An automatic restart is carried out if any fault has occurred or there is a 1 signal at binector input p1208[0].

For p1210 = 14:

as for p1210 = 4. However, active faults must be manually acknowledged.

For p1210 = 16:

as for p1210 = 6. However, active faults must be manually acknowledged.

p1210 Automatic restart mode / AR mode

B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	6	0

Description: Sets the automatic restart mode (AR).

Value:
0: Inhibit automatic restart
1: Acknowledge all faults without restarting
6: Restart after fault with additional start attempts

Dependency: The automatic restart requires an active ON command (e.g., via a digital input). If, for p1210 > 1, there is no active ON command, then the automatic restart is interrupted.

When using an Advanced Operator Panel (AOP) in the LOCAL Mode, then there is no automatic restart.

See also: p0840, p0857, p1267

See also: F30003

Danger:

If the automatic restart is activated (p1210 > 1) if there is an ON command (refer to p0840), the drive is switched on as soon as any fault messages that are present can be acknowledged. This also occurs after the line supply returns or the Control Unit boots if the DC link voltage is again present or the feedback of the line supply infeed (refer to p0864) is again available. This automatic switching-on operation can only be interrupted by withdrawing the ON command.

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

For p1210 > 1, the infeed is automatically started.

Note: For p1210 = 1:

Faults that are present are automatically acknowledged. If new faults occur after a successful fault acknowledgment, then these are also automatically acknowledged again. A minimum time of p1212 + 1 s must expire between a successful fault acknowledgment and a fault re-occurring if the signal ON/OFF1 (STW1.0) is at a HIGH signal level. If the signal ON/OFF1 is at a LOW signal level, then the time between a successful fault acknowledgment and a new fault must be at least 1 s. p1211 has no influence on the number of acknowledgment attempts.

For p1210 = 6:

An automatic restart is carried out if any fault has occurred.

p1211 Automatic restart start attempts / AR start attempts

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	10	3

Description: Sets the start attempts of the automatic restart function for p1210 = 4, 6.

Dependency: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

See also: p1210, r1214

See also: F07320

Notice: After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.

After a complete power failure (blackout) the start counter always starts with the counter value that applied before the power failure, and decrements this start attempt by 1. If a further attempt to acknowledge is started by the automatic restart function prior to power failure, e.g. if the Control Unit remains active on power failure longer than the time p1212/2, the fault counter will already have been decremented once. In this case, the start counter is thus decreased by the value 2.

Note: A start attempt starts immediately when a fault occurs. The start attempt is considered to been completed if the motor was magnetized (r0056.4 = 1) and an additional delay time of 1 s has expired.

As long as a fault is present, an acknowledge command is generated in the time intervals of p1212 / 2. When successfully acknowledged, the start counter is decremented. If, after this, a fault re-occurs before a restart has been completed, then acknowledgment starts again from the beginning.

Fault F07320 is output if, after several faults occur, the number of parameterized start attempts has been reached. After a successful start attempt, i.e. a fault/error has no longer occurred up to the end of the magnetizing phase, the start counter is again reset to the parameter value after 1 s. If a fault re-occurs - the parameterized number of start attempts is again available.

At least one start attempt is always carried out.

After a line supply failure, acknowledgment is immediate and when the line supply returns, the system is switched on. If, between successfully acknowledging the line fault and the line supply returning, another fault occurs, then its acknowledgment also causes the start counter to be decremented.

p1211 Automatic restart start attempts / AR start attempts

B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	10	3

Description: Sets the start attempts of the automatic restart function for p1210 = 4, 6.

Dependency: This parameter setting is active for p1210 = 6.

For p1210 = 4, the parameter only has an influence if, when attempting to start, an additional line phase failure (F06200) occurs.

A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

See also: p1210, r1214

See also: F07320

Notice: After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.

After a complete power failure (blackout) the start counter always starts with the counter value that applied before the power failure, and decrements this start attempt by 1. If a further attempt to acknowledge is started by the automatic restart function prior to power failure, e.g. if the Control Unit remains active on power failure longer than the time p1212/2, the fault counter will already have been decremented once. In this case, the start counter is thus decreased by the value 2.

Note: A start attempt starts immediately when a fault occurs. The restart attempt is considered to have been completed if the infeed is switched on and an additional delay time of 1 s has expired.

As long as a fault is present, an acknowledge command is generated in the time intervals of p1212 / 2. When successfully acknowledged, the start counter is decremented. If, after this, a fault re-occurs before a restart has been completed, then acknowledgment starts again from the beginning.

Fault F07320 is output if, after several faults occur, the number of parameterized start attempts has been reached. After a successful start attempt (i.e. a fault/error has no longer occurred up to the end of the switching-on operation) the start counter is again reset to the parameter value after 1 s. If faults re-occur, the parameterized number of start attempts is again available.

At least one start attempt is always carried out.

After a line supply failure, acknowledgment is immediate and when the line supply returns, the system is switched on. If, between successfully acknowledging the line fault and the line supply returning, another fault occurs, then its acknowledgment also causes the start counter to be decremented.

p1212 Automatic restart delay time start attempts / AR t_wait start

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.1 [s]	1000.0 [s]	1.0 [s]

Description: Sets the delay time up to restart.

Dependency: This parameter setting is active for p1210 = 4, 6.

For p1210 = 1, the following applies:

Faults are only automatically acknowledged in half of the waiting time, no restart.

See also: p1210, r1214

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Note: The faults are automatically acknowledged after half of the delay time has expired and the full delay time.

If the cause of a fault is not removed in the first half of the delay time, then it is no longer possible to acknowledge in the delay time.

p1212 Automatic restart delay time start attempts / AR t_wait start

B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.1 [s]	1000.0 [s]	1.0 [s]

Description: Sets the delay time up to restart.

Dependency: This parameter setting is active for p1210 = 4, 6.

For p1210 = 1, the following applies:

Only automatic acknowledgment of the faults, no restart.

See also: p1210, r1214

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

Note: Faults are automatically acknowledged and the drive switched on again after half and the complete wait time have expired.

p1213[0...1] Automatic restart monitoring time / AR t_mon

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [s]	10000.0 [s]	0.0 [s]

Description: Sets the monitoring time of the automatic restart (AR).

Index: [0] = Restart
[1] = Reset start counter

Dependency: See also: p1210, r1214

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.

Note: For index [0]:

The monitoring time starts when the faults are detected. If the automatic acknowledgments are not successful, the monitoring time runs again. If, after the monitoring time has expired, the drive has still not successfully started again (flying restart and magnetizing of the motor must have been completed: r0056.4 = 1), then fault F07320 is output.

The monitoring is deactivated with p1213 = 0. If p1213 is set lower than the sum of p1212, the magnetizing time p0346 and the additional delay time due to the flying restart, then fault F07320 is generated at each restart. If, for p1210 = 1, the time in p1213 is set lower than in p1212, then fault F07320 is also generated at each restart.

The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowledged (e.g. for faults that are permanently present).

In the case of p1210 = 14, 16, the faults which are present must be acknowledged manually within the time in p1213[0]. Otherwise, fault F07320 is generated after the set time.

For index [1]:

The start counter (refer to r1214) is only set back to the starting value p1211 if, after successful restart, the time in p1213[1] has expired. The delay time is not effective for fault acknowledgment without automatic restart (p1210 = 1). After a power failure (blackout) the delay time only starts after the line supply returns and the Control Unit boots. The start counter is set to p1211, if F07320 occurred, the switch-on command is withdrawn and the fault is acknowledged.

The start counter is immediately updated if the starting value p1211 or the mode p1210 is changed.

p1213[0...1] Automatic restart monitoring time / AR t_mon

B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [s]	10000.0 [s]	0.0 [s]

Description: Sets the monitoring time of the automatic restart (AR).

Index: [0] = Restart
[1] = Reset start counter

Dependency: See also: p1210, r1214

Notice: A change is only accepted and made in the state "initialization" (r1214.0) and "wait for alarm" (r1214.1).

After fault F07320 occurs, the switch-on command must be withdrawn and all of the faults acknowledged so that the automatic restart function is re-activated.

Note: For index [0]:

The monitoring time starts when the faults are detected. If the automatic acknowledgments are not successful, the monitoring time runs again. If the drive has not restarted at the end of the monitoring time, fault F07320 is signaled.

The monitoring is deactivated with p1213 = 0. If p1213 is set to a value which is lower than in p1212, fault F07320 is generated at each restart. If, for p1210 = 1, the time in p1213 is set lower than in p1212, then fault F07320 is also generated at each restart.

The monitoring time must be extended if the faults that occur cannot be immediately and successfully acknowledged (e.g. for faults that are permanently present).

For index [1]:

The start counter (refer to r1214) is only set back to the starting value p1211 if, after successful restart, the time in p1213[1] has expired. The delay time is not effective for fault acknowledgment without automatic restart (p1210 = 1). After a power failure (blackout) the delay time only starts after the line supply returns and the Control Unit boots. The start counter is set to p1211, if F07320 occurred, the switch-on command is withdrawn and the fault is acknowledged.

The start counter is immediately updated if the starting value p1211 or the mode p1210 is changed.

r1214.0...15 CO/BO: Automatic restart status / AR status

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3

P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the status of the automatic restart (AR).

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Initialization	Yes	No	-
01	Wait for alarm	Yes	No	-
02	Auto restart act	Yes	No	-
03	Setting the acknowledgment command	Yes	No	-
04	Acknowledge alarms	Yes	No	-
05	Restart	Yes	No	-
06	Delay time running after automatic switch-on	Yes	No	-
07	Fault	Yes	No	-
10	Effective fault	Yes	No	-
12	Start counter bit 0	ON	OFF	-
13	Start counter bit 1	ON	OFF	-
14	Start counter bit 2	ON	OFF	-
15	Start counter bit 3	ON	OFF	-

Note:

For bit 00:

State to display the single initialization after POWER ON.

For bit 01:

State in which the automatic restart function waits for faults (initial state).

For bit 02:

General display that a fault has been identified and that the restart or acknowledgment has been initiated.

For bit 03:

Displays the acknowledge command within the "acknowledge alarms" state (bit 4 = 1). For bit 5 = 1 or bit 6 = 1, the acknowledge command is continually displayed.

For bit 04:

State in which the faults that are present are acknowledged. The state is exited again after successful acknowledgment. A change is only made into the next state if it is signaled that a fault is no longer present after an acknowledgment command (bit 3 = 1).

For bit 05:

State in which the drive is automatically switched on (only for p1210 = 4, 6).

For bit 06:

State in which the system waits after having been switched on, to the end of the start attempt (to the end of the magnetizing process).

For p1210 = 1, this signal is directly set after the faults have been successfully acknowledged.

For bit 07:

State which is assumed after a fault occurs within the automatic restart function. This is only reset after acknowledging the fault and withdrawing the switch-on command.

For bit 10:

When the automatic restart function is active, r1214.7 is displayed, otherwise the active fault r2139.3.

The bit is set if the automatic restart can no longer acknowledge a fault, and cancels with fault F07320.

For bits 12 ... 15:

Actual state of the start counter (binary coded).

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 2701, 2707, 2711
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	3	0

Description: Sets the holding brake configuration.

Value:

0: No motor holding brake available
1: Motor holding brake acc. to sequence control
2: Motor holding brake always open
3: Motor holding brake like sequence control connection via BICO

Dependency: See also: p1216, p1217, p1226, p1227, p1228, p1278

Caution: For the setting p1215 = 0, if a brake is used, it remains closed. If the motor moves, this will destroy the brake.

Notice: If p1215 was set to 1 or if p1215 was set to 3, then when the pulses are suppressed, the brake is closed even if the motor is still rotating. Pulse suppression can either be caused by a 0 signal at p0844, p0845 or p0852 or as a result of a fault with OFF2 response. If this is not desirable (e.g. for a flying restart), then the brake can be kept open using a 1 signal at p0855.

Note: If the configuration is set to "no holding brake present" when running up, then the motor holding brake is automatically identified. If a motor holding brake is detected, the configuration is set to "motor holding brake as for sequence control".

If a motor holding brake is used via the brake connection of the Motor Module integrated in the drive, then it is not permissible that p1215 is set to 3.

if an external motor holding brake is being used, then p1215 should be set to 3 and r0899.12 should be interconnected as control signal.

When the function module "extended brake control" is activated (r0108.14 = 1), r1229.1 should be interconnected as control signal.

The parameter can only be set to zero when the pulses are inhibited.

The parameterization "no motor holding brake available" and "Safe Brake Control" enabled (p1215 = 0, p9602 = 1, p9802 = 1) is not practical if there is no motor holding brake.

The parameterization "motor holding brake the same as sequence control, connection via BICO" and "Safe Brake Control" enabled (p1215 = 3, p9602 = 1, p9802 = 1) is not practical.

p1216 Motor holding brake opening time / Brake t_open

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2701, 2711
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	10000 [ms]	100 [ms]

Description: Sets the time to open the motor holding brake.

After controlling the holding brake (opens), the speed/velocity setpoint remains at zero for this time. After this, the speed/velocity setpoint is enabled.

Recommendation: This time should be set longer than the actual opening time of the brake. This ensures that the drive cannot accelerate when the brake is applied.

Dependency: See also: p1215, p1217

Note: For a motor with DRIVE-CLiQ and integrated brake, for p0300 = 10000, this time is pre-assigned the value saved in the motor.

For p1216 = 0 ms, the monitoring and the message A07931 "Brake does not open" are deactivated.

p1217 Motor holding brake closing time / Brake t_close

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2701, 2711
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	10000 [ms]	100 [ms]

Description: Sets the time to apply the motor holding brake.

After OFF1 or OFF3 and the holding brake is controlled (the brake closes), then the drive remains closed-loop controlled for this time stationary with a speed setpoint/velocity setpoint of zero. The pulses are suppressed when the time expires.

Recommendation: This time should be set longer than the actual closing time of the brake. This ensures that the pulses are only suppressed after the brake has closed.

Dependency: See also: p1215, p1216

Notice: If the selected closing time is too short with respect to the actual closing time of the brake, then the load can sag.

If the closing time is selected to be too long with respect to the actual closing time of the brake, the control works against the brake and therefore reduces its lifetime.

Note: For a motor with DRIVE-CLiQ and integrated brake, for p0300 = 10000, this time is pre-assigned the value saved in the motor.

For p1217 = 0 ms, the monitoring and the message A07932 "Brake does not close" are deactivated.

Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	63[0]

Description: Sets the signal source "threshold value" for the standstill identification.

Dependency: See also: p1226, p1228, r1229

p1226[0...n] Threshold for zero speed detection / n_standst n_thr

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 2701, 2704
P group: Functions	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	210000.00 [rpm]	20.00 [rpm]

Description: Sets the speed threshold for the standstill identification.

Acts on the actual value and setpoint monitoring.

When braking with OFF1 or OFF3, when the threshold is undershot, standstill is identified.

The following applies when the brake control is activated:

When the threshold is undershot, the brake control is started and the system waits for the brake closing time in p1217. The pulses are then suppressed.

if the brake control is not activated, the following applies:

When the threshold is undershot, the pulses are suppressed and the drive coasts down.

Dependency: See also: p1215, p1216, p1217, p1227

Notice: For reasons relating to the compatibility to earlier firmware versions, a parameter value of zero in indices 1 to 31 is overwritten with the parameter value in index 0 when the Control Unit boots.

Note: Standstill is identified in the following cases:

- the speed actual value falls below the speed threshold in p1226 and the time started after this in p1228 has expired.
- the speed setpoint falls below the speed threshold in p1226 and the time started after this in p1227 has expired.

The actual value sensing is subject to measuring noise. For this reason, standstill cannot be detected if the speed threshold is too low.

p1227 Zero speed detection monitoring time / n_standst t_mon

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2701, 2704
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	300.000 [s]	4.000 [s]

Description: Sets the monitoring time for the standstill identification.

When braking with OFF1 or OFF3, standstill is identified after this time has expired, after the setpoint speed has fallen below p1226 (also refer to p1145).

After this, the brake control is started, the system waits for the closing time in p1217 and then the pulses are suppressed.

Dependency: See also: p1215, p1216, p1217, p1226

Notice: For p1145 > 0.0 (RFG tracking) the setpoint is not equal to zero dependent on the selected value. This can therefore cause the monitoring time in p1227 to be exceeded. In this case, for a driven motor, the pulses are not suppressed.

Note: Standstill is identified in the following cases:
- the speed actual value falls below the speed threshold in p1226 and the time started after this in p1228 has expired.
- the speed setpoint falls below the speed threshold in p1226 and the time started after this in p1227 has expired.

For p1227 = 300.000 s the following applies:
Monitoring is deactivated.
For p1227 = 0.000 s, the following applies:
With OFF1 or OFF3 and a ramp-down time = 0, the pulses are immediately suppressed and the motor "coasts" down.

p1228 Pulse suppression delay time / Pulse suppr t_del

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2701, 2704
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	299.000 [s]	0.000 [s]

Description: Sets the delay time for pulse suppression.
After OFF1 or OFF3, the pulses are canceled, if at least one of the following conditions is fulfilled:
- the speed actual value falls below the threshold in p1226 and the time started after this in p1228 has expired.
- the speed setpoint falls below the threshold in p1226 and the time started after this in p1227 has expired.

Dependency: See also: p1226, p1227
Notice: When the motor holding brake is activated, pulse cancellation is additionally delayed by the brake closing time (p1217).

r1229.1...11 CO/BO: Motor holding brake status word / Brake ZSW

p1231[0...n] Armature short-circuit / DC braking configuration / ASC/DCBRK config

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** MDS, p0130	**Function diagram:** 7014, 7016, 7017
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	14	0

Description: Setting to activate the various types for armature short-circuit / DC braking.

Value:
0: No function
1: External armature short-circuit with contactor feedback signal
2: Ext. armature short circuit without contactor feedback signal
3: Internal voltage protection
4: Internal armature short-circuit / DC braking
5: DC braking for OFF1/OFF3
14: DC braking below starting speed

Dependency: See also: p0300, p1230, p1232, p1233, p1234, p1235, p1236, p1237, r1238, r1239, p1345, p1346

Danger:

For p1231 = 1, 2:

- only short-circuit-proof motors may be used, or suitable resistors must be used to short-circuit the motor

For p1231 = 3:

- when the internal voltage protection is active, after pulse suppression, all of the motor terminals are at half of the DC link voltage (without an internal voltage protection, the motor terminals are at zero potential)!
- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).
- the Motor Module must be able to conduct 180% short-circuit current (r0320) of the motor (r0209).
- the internal voltage protection cannot be interrupted due to a fault response. If an overcurrent condition occurs during the active, internal voltage protection, then this can destroy the Motor Module and/or the motor.
- if the Motor Module does not support the autonomous, internal voltage protection (r0192.10 = 0), in order to ensure safe, reliable functioning when the line supply fails, an external 24 V power supply (UPS) must be used for the components.
- if the Motor Module does support the autonomous, internal voltage protection (r0192.10 = 1), in order to ensure safe, reliable functioning when the line supply fails, the 24 V power supply for the components must be provided through a Control Supply Module.
- if the internal voltage protection is active, it is not permissible that the motor is driven by the load for a longer period of time (e.g. as a result of loads that move the motor or another coupled motor).

For p1231 = 4 and synchronous motor:

- when armature short-circuit is active, all of the motor terminals are at half of the DC link potential.
- it is only permissible to use motors that are short-circuit proof (p0320 < p0323).
- the Motor Module must be able to conduct 180% short-circuit current (r0320) of the motor (r0209).
- for pulling loads, it is not permissible that an armature short circuit is used by itself. The reason for this is that until this becomes effective, the motor will have continued to rotate. In the case of a fault, it is only permissible to use an armature short circuit as support in conjunction with a mechanical brake.

For p1231 = 4 and induction motor:

- it is not permissible that DC braking is used for pulling loads; this is because during the demagnetization time (p0347) the motor rotates and a mechanical brake is then only closed while the motor is still rotating.

Note:

For p1231 = 1, 2:

The external armature short circuit can only be selected for synchronous motors (p0300). In this case, control bit BO: r1239.0 must be interconnected (e.g. to a digital input) to control the external contactor.

The external armature short circuit cannot be set as a fault response. It can be triggered via binector input p1230. It is also always activated in the case of pulse suppression.

When the external armature short circuit is activated, the system waits for the de-excitation time (p0347) before the short-circuit contactor is controlled. For vector control, for the de-excitation time, a value greater than zero may be required in order to avoid the overcurrent monitoring from responding.

For p1231 = 3:

Internal voltage protection (using an internal armature short circuit) can only be selected for synchronous motors (p0300) and Motor Modules in booksize or chassis format. Further, it is not permissible for Safety Integrated to be active on blocksize Motor Modules (i.e. p9501 = 0 and p9601 = 0). The internal voltage protection prevents the DC link capacitance from being charged if there is no possibility of regenerating the EMF of a motor operated in the field-weakening mode. The Motor Module must support this function (r0192.9 = 1).

a) If the Motor Module does not support the autonomous, internal armature short-circuit (r0192.10 = 0), the armature short-circuit is activated as soon as the activation criterion is fulfilled (refer below):

b) If the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1), then the Motor Module itself decides - using the DC link voltage - as to whether the short-circuit should be activated. In this case, protection is also provided even if the DRIVE-CLiQ connection between the Control Unit and Motor Module was interrupted. The short circuit is activated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the short-circuit is withdrawn. This therefore ensures that the required input voltage for the Control Supply Module is maintained.

For chassis units, the following applies:

The value for the voltage limits is calculated, depending on the voltage class, from EEPROM data of the particular power unit and a factor.

For p1231 = 4:

The function is activated as soon as the activation criterion is fulfilled.

- the function can be superseded by OFF2

a) For synchronous motors (p0300 = 2xx, 4xx), the internal armature short-circuit is initiated.

- the Motor Module must support this function (r0192.9 = 1).

b) For induction motors (p0300 = 1xx), the DC braking is initiated.

Activation criterion (one of the following criteria is fulfilled):

- binector input p1230 = 1 signal (DC braking activation).

- the drive is not in the state "S4: Operation" or in "S5x" (refer to function diagram 2610).

- the internal pulse enable is missing (r0046.19 = 0).

For p1231 = 5:

DC braking can only be set for induction motors.

DC braking is activated if the OFF1 or OFF3 command is present. Binector input p1230 is ineffective. If the drive speed still lies above the speed threshold p1234, then initially, the drive is ramped-down to this threshold, demagnetized (see p0347) and is then switched into DC braking for the time set in p1233. After this, the drive is switched-off. If, at OFF1/OFF3, the drive speed is below p1234, then it is immediately demagnetized and switched into DC braking. A change is made into normal operation if the OFF1 command is withdrawn prematurely.

DC braking by means of fault response continues to be possible.

For p1231 = 14:

DC braking can only be set for induction motors.

DC braking is initiated if binector input p1230 = 1 during operation and the actual speed is below the starting speed p1234 (before this, the drive must have operated above p1234 plus the hysteresis). Then, following upstream de-magnetization (see p0347), the braking current p1232 is injected for the time set in p1233. The drive then changes into normal operation. During braking the command for DC braking can be withdrawn. If the time p1233 is exceeded, then DC braking is inhibited and the drive changes into normal operation.

For OFF1 and OFF3, DC braking is only executed, if binector input p1230 = 1 signal.

DC braking by means of fault response continues to be possible.

For operation with an encoder, the encoder signal may not exceed a ripple of 15 rpm in the range of p1234.

For p1231 = 3, 4, 5, 14:

The value can only be changed to values not equal to 3, 4, 5 or 14 if p0491 is not equal to 4 and p2101 is not equal to 6 (armature short-circuit/DC braking not set).

In order that the armature short-circuit/DC braking is active as fault response, the corresponding fault number must be entered in p2100 and fault response p2101 set = 6 (encoder fault response, see p0491).

Note:

ASC: Armature Short Circuit
CSM: Control Supply Module
DCBRK: DC Braking
IVP: Internal Voltage Protection
UPS: Uninterruptible Power Supply

p1232[0...n] DC braking braking current / DCBRK I_brake

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 1

	Min:	**Max:**	**Factory setting:**
	0.0 [s]	3600.0 [s]	1.0 [s]

Description: Sets the DC braking time (as fault response).

Dependency: See also: p1230, p1231, p1232, p1234, r1239

Note: The time that has been set is also effective when parameterizing DC braking as fault response.

If a speed encoder is being used, DC braking is ended as soon as the speed falls below the standstill threshold (p1226).

p1234[0...n] Speed at the start of DC braking / DCBRK n_start

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 7017
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	40000.00 [rpm]

Description: Sets the starting speed for DC braking.

If the actual speed falls below this threshold, then DC braking is activated.

Dependency: See also: p1230, p1231, p1232, p1233, r1239

Notice: If an encoder fault occurs during closed-loop operation with an encoder, controlled deceleration of the drive down to the start speed p1234 is no longer possible. In this case, DC braking is activated immediately and injects the braking current p1232 for the braking time p1233 after de-magnetizing. The braking current and braking duration must, therefore, be dimensioned accordingly for this situation so that the drive can be decelerated to standstill.

In the case of operation with an encoder, this speed may not be set too low so as ensure that the oscillation movement induced by the residual flux/remanence of the motor does not cause DC braking to be deactivated again.

Note: Function p1231 = 14 is activated at 15 1/min higher than the value set in p1234. This hysteresis is required to prevent DC braking from being deactivated for speed encoder signals with ripple.

p1235[0...n] BI: External armature short-circuit contactor feedback signal / ASC ext feedback

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the contactor feedback signal for external armature short-circuit.

Dependency: See also: p1230, p1231, p1236, p1237, r1239

Notice: In order that the pulses are not enabled when the contactor is closed, the contactor feedback signal must lag by a sufficiently long time when opening the contactor.

Note: 1 signal: The contactor is closed.
0 signal: The contactor is open.

p1236[0...n] Ext. armature short-cct. contactor feedback signal monit. time / ASC ext t_mon

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	1000 [ms]	200 [ms]

Description: Sets the monitoring time of the contactor feedback signal for the external armature short-circuit configuration.
If the contactor feedback signal (p1235) is parameterized, then the appropriate feedback signal (r1239.1) is expected within this monitoring time after either opening or closing the contactor.

Dependency: See also: p1230, p1231, p1235, p1237, r1239
See also: F07904, F07905

p1237[0...n] External armature short-circuit delay time when opening / ASC ext t_wait

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	1000 [ms]	200 [ms]

Description: Sets the delay time when opening the contactor of the external armature short-circuit.
If no contactor feedback signal has been selected (p1235), then the system waits for this time before the pulses are switched in.

Dependency: See also: p1230, p1231, p1235, p1236, r1239

Notice: This delay time must be at least long enough so that the contactor contacts reliably open before the pulses are switched in. The delay time must be greater than the contactor response time. The Motor Module can be damaged if the delay time is too short.

r1238 CO: Armature short-circuit external state / EASC state

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** 2610
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	6	-

Description: Displays the state for the external armature short-circuit.

Value:
0: Switched off
1: Ready
2: Active
3: Active - feedback signal "Closed" OK
4: Active - feedback signal "Closed" missing
5: Prompt to remove the armature short-circuit
6: Active - feedback signal "Open" missing

Dependency: See also: p1230, p1231, p1235, p1236, p1237, r1239

See also: F07904, F07905

Note: Activation criterion (one of the following criteria is fulfilled):

- the signal at BI: p1230 (armature short-circuit activation) is 0.
- the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

For state "switched out" (r1238 = 0):

- the external armature short-circuit can be selected with p1231 = 1.

For state "ready" (r1238 = 1):

- as soon as the activation criterion is fulfilled, then a transition is made into the state "active" (r1238 = 2).

Regarding the state "active" (r1238 = 2), "active - feedback signal "Closed" OK" (r1238 = 3)", "active - feedback signal "Closed" missing" (r1238 = 4)":

- the control signal to close contactor r1239.0 is set to "1" (closed) and the pulses are suppressed.
- if a contactor feedback signal is not connected (BI: p1235 = 0 signal), then a transition is immediately made into state 3.
- if a contactor feedback signal is connected, then a transition is made into state 3 if the feedback signal at BI: p1235 goes to "1" (closed) within the monitoring time (p1236).
- otherwise, a transition is made into state 4.

For state "prompt to remove the armature short-circuit" (r1238 = 5):

- the activation criterion is no longer fulfilled. An attempt is made to again remove the armature short circuit.
- the control signal to close the contactor r1239.0 is set to "0" (open) and the pulses remain suppressed.
- if a contactor feedback signal is not connected (BI: p1235 = 0 signal), the system waits for the delay time (p1237) to expire until a transition is made into state 1.
- if a contactor feedback signal is connected, the system waits until the feedback signal at BI:p1235 goes to "0" (open) until a transition is made into state 1. If this does not occur within the monitoring time (p1236), then a transition is made into state 6.

For state "active - feedback signal "Open" missing" (r1238 = 6):

- this error state can be exited by deselecting the external armature short-circuit (p1231 = 0).

r1239.0...13 CO/BO: Armature short-circuit / DC braking status word / ASC/DCBRK ZSW

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the status word for armature short-circuit.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	External armature short-circuit	Active	Inactive	-
01	External armature short-circuit contactor feedback signal	Closed	Open	-
02	External armature short-circuit ready	Yes	No	-

03	External armature short-circuit with contactor feedback signal	Yes	No	-
04	Internal armature short-circuit	Active	Inactive	-
05	Internal armature short circuit feedback signal from power unit	Active	Inactive	-
06	Internal armature short-circuit ready	Yes	No	-
08	DC braking active	Yes	No	7017
09	DC current injection active	Yes	No	-
10	DC braking ready	Yes	No	7017
11	Armature short circuit/DC braking selected	Yes	No	-
12	DC braking selection internally inhibited	Yes	No	-
13	DC braking for OFF1/OFF3	Yes	No	-

Dependency: See also: p1230, p1231, p1232, p1233, p1234, p1235, p1236, p1237

Note: External armature short-circuit (bits 0 ... 3):

For bit 00:

Using this signal, the motor is short-circuited through an external contactor circuit. This means that this BO: p1239.0 must be interconnected e.g. to a digital output.

For bit 01:

This signal indicates the state of the contactor to establish the armature short-circuit. To do this, BI: p1235 must be interconnected to a digital input.

For bit 02:

The external armature short-circuit configuration is ready and is activated as soon as the activation criterion is fulfilled.

For bit 03:

1: A feedback signal from an external contactor was parameterized in BI: p1235.

Internal voltage protection / internal armature short-circuit (bits 4 ... 6):

For bit 04:

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module does not support the autonomous internal voltage protection (r0192.10 = 0).

The Control Unit issues the command to the Motor Module to short-circuit the motor through the power semiconductors.

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1).

The Motor Module decides autonomously whether the armature short-circuit is activated. In this case, the following applies: r1239.4 = r1239.5.

c) Internal armature short-circuit (p1231 = 4) was selected.

The Control Unit issues the command to the Motor Module to short-circuit the motor through the power semiconductors.

For bit 05:

The Motor Module signals that the motor is short-circuited in the Motor Module through the power semiconductors.

For bit 06:

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module does not support the autonomous internal voltage protection (r0192.10 = 0).

The internal voltage protection is ready and is activated as soon as the activation criterion is fulfilled.

a) Internal voltage protection (p1231 = 3) was selected and the Motor Module supports the autonomous internal voltage protection (r0192.10 = 1).

The internal voltage protection is ready and the Motor Module decides autonomously - using the DC link voltage - whether the short-circuit is activated. In this case, protection is also provided even if the DRIVE-CLiQ connection between the Control Unit and Motor Module was interrupted. The short-circuit is activated if the DC link voltage exceeds 800 V. If the DC link voltage falls below 450 V, then the short-circuit is withdrawn.

c) Internal armature short-circuit (p1231 = 4) was selected.

The internal armature short-circuit is ready and is activated as soon as the activation criterion is fulfilled.

Activation criterion (one of the following criteria is fulfilled):

- the signal at BI: p1230 (armature short-circuit activation) is 1.
- the drive is not in the state "S4: Operation" or in S5x (refer to function diagram 2610).
- the internal pulse enable is missing (r0046.19 = 0).

For bits 12, 13:

Only effective for p1231 = 14.

p1240[0...n] Vdc controller or Vdc monitoring configuration / Vdc ctrl config

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 6220
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	6	1

Description: Sets the controller configuration of the DC link voltage (Vdc controller) in the closed-loop control mode.

Value:
0: Inhibit Vdc ctrl
1: Enable Vdc_max controller
2: Enable Vdc_min controller (kinetic buffering)
3: Enable Vdc_min controller and Vdc_max controller
4: Activate Vdc_max monitoring
5: Activate Vdc_min monitoring
6: Activate Vdc_min monitoring and Vdc_max monitoring

Dependency: See also: p1245

See also: A07400, A07401, A07402, F07403, F07404, F07405, F07406

Warning: When the Vdc_max controller is active, the motor can be accelerated (e.g. by driving loads or as a result of high DC link voltages). This can be caused by other drives that are operating on a common DC link busbar.

Caution: If several drives are operated from the same DC link busbar, then it is recommended that the Udc control is only activated for the drives with high moments of inertia. If the Udc controls for various drives are simultaneously active, then they can mutually influence one another. In this case, the controller dynamic performance should be reduced or the Udc control of individual drives should be deactivated.

Drives with Udc control must be able to brake and accelerate independently of one another.

Notice: An excessively high value in p1245 can possibly negatively influence the normal operation of the drive.

Note: p1240 = 1, 3:

When the DC link voltage limit specified for the Motor Module is reached the following applies:

- the Vdc_max controller limits the regenerative energy in order that the DC link voltage is kept below the maximum DC link voltage when braking.

- the ramp-down times are automatically increased.

p1240 = 2, 3:

When the switch-in threshold of the Vdc_min controller is reached (p1245), the following applies:

- the Vdc_min controller limits the energy taken from the DC link in order to keep the DC link voltage above the minimum DC link voltage when accelerating.

- the motor is braked in order to use its kinetic energy to buffer the DC link.

p1240 = 4, 5, 6:

When the threshold in r1242 or r1246 is reached, the DC link voltage monitoring initiates a fault (F07403 or F07404) with a response and therefore reduces additional negative effects on the DC link voltage.

If a braking resistor is connected to the DC link, then the Vdc_max control should be disabled (also see p1531).

r1242 Vdc_max controller switch-in level / Vdc_max on_level

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6220
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_max controller.

If p1254 = 0 (automatic sensing of the switch-in level = off), then the following applies:

AC/AC device: r1242 = 1.15 * sqrt(2) * p0210

DC/AC device: r1242 = 1.15 * p0210

If p1254 = 1 (automatic sensing of the switch-in level = on), then the following applies:

r1242 = Vdc_max - 50.0 V (Vdc_max: Overvoltage threshold of the power unit)

r1242 = Vdc_max - 25.0 V (for 230 V power units)

Notice: If the activation level of the Vdc_max controller is already exceeded in the deactivated state (pulse inhibit) by the DC link voltage, then the controller can be automatically deactivated (see F07401), so that the drive is not accelerated the next time that it is activated.

Note: The Vdc_max controller is not switched back off until the DC link voltage falls below the threshold 0.95 * r1242 and the controller output is zero.

p1243[0...n] Vdc_max controller dynamic factor / Vdc_max dyn_factor

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6220
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the DC link voltage controller (Vdc_max controller).

100% means that p1250, p1251, and p1252 (gain, integral time, and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.

If subsequent optimization is required, this can be carried out using the dynamic factor. In this case p1250, p1251, p1252 are weighted with the dynamic factor p1243.

If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.

Note: The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.

p1245[0...n] Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
65 [%]	150 [%]	76 [%]

Description: Sets the switch-in level for the Vdc-min controller (kinetic buffering).

The value is obtained as follows:

AC/AC device: r1246[V] = p1245[%] * sqrt(2) * p0210

DC/AC device: r1246[V] = p1245[%] * p0210

Dependency: See also: p0210

Warning: An excessively high value possibly negatively influences normal drive operation, and can mean that after the line supply returns, the Vdc minimum control can no longer be exited.

The values up to 150 % are intended for operating modes p1240 = 5, 6.

Note: For SINAMICS GM/SM, the following applies:

Minimum value = 0.75

Maximum value = 0.90

r1246 Vdc_min controller switch-in level (kinetic buffering) / Vdc_min on_level

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6220
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_min controller (kinetic buffering).

Note: The Vdc_min controller is not switched back off until the DC link voltage rises above the threshold 1.05 * p1246 and the controller output is zero.

p1247[0...n] Vdc_min controller dynamic factor (kinetic buffering) / Vdc_min dyn_factor

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6220
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the Vdc_min controller (kinetic buffering).

100% means that p1250, p1251, and p1252 (gain, integral time, and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.

If subsequent optimization is required, this can be carried out using the dynamic factor. In this case p1250, p1251, p1252 are weighted with the dynamic factor p1247.

If several components are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the component involved.

p1249[0...n] Vdc_max controller speed threshold / Vdc_max n_thr

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Functions	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	10.00 [rpm]

Description: Sets the lower speed threshold for the Vdc_max controller.

When this speed threshold is undershot, the Vdc_max control is switched out and the speed is controlled using the ramp-function generator.

Note: For fast braking where the ramp-function generator tracking was active, it is possible to prevent the drive rotating in the opposite direction by increasing the speed threshold and setting a final rounding-off time in the ramp-function generator (p1131). This is supported using a dynamic setting of the speed controller.

p1250[0...n] Vdc controller proportional gain / Vdc_ctrl Kp

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00	100.00	1.00

Description: Sets the proportional gain for the DC link voltage controller (Vdc_min controller, Vdc_max controller).

Dependency: The effective proportional gain is obtained taking into account p1243 (Vdc_max controller dynamic factor).

Note: The gain factor is proportional to the capacitance of the DC link. The parameter is pre-set to a value that is optimally adapted to the capacitance of the individual Motor Module. The capacitances of the other power units, which are connected to the DC link, can be taken into account using the dynamic factor (p1247 or p1243).

p1251[0...n] Vdc controller integral time / Vdc_ctrl Tn

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6220
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	10000 [ms]	0 [ms]

Description: Sets the integral time for the DC link voltage controller (Vdc_min controller, Vdc_max controller).

Dependency: The effective integral time is obtained taking into account p1243 (Vdc_max controller dynamic factor).

Note: An integral time is normally not required for single axis drives. For multi-axis drives on the other hand, it may be possible to compensate for interference from other axes using the integral time (integral component) .
p1251 = 0: The integral component is deactivated.

p1252[0...n] Vdc controller rate time / Vdc_ctrl Tv

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6220
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	1000 [ms]	0 [ms]

Description: Sets the rate time constant for the DC link voltage controller (Vdc_min controller, Vdc_max controller).
Dependency: The effective rate time is obtained taking into account p1243 (Vdc_max controller dynamic factor).

p1254 Vdc_max controller automatic ON level detection / Vdc_max SenseOnLev

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	1

Description: Activates/deactivates the automatic sensing of the switch-in level for the Vdc_max controller.
Value:
0: Automatic detection inhibited
1: Automatic detection enabled

p1255[0...n] Vdc_min controller time threshold / Vdc_min t_thr

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	10000.000 [s]	0.000 [s]

Description: Sets the time threshold for the Vdc_min controller (kinetic buffering).
If this value is exceeded a fault is output; the required response can be parameterized.
Prerequisite: p1256 = 1
Dependency: See also: F07406
Notice: If a time threshold has been parameterized, the Vdc_max controller should also be activated (p1240 = 3) so that the drive does not shut down with overvoltage when Vdc_min control is exited (due to the time violation) and in the event of fault response OFF3. It is also possible to increase the OFF3 ramp-down time p1135.

p1256[0...n] Vdc_min controller response (kinetic buffering) / Vdc_min response

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Sets the response for the Vdc_min controller (kinetic buffering).
Value:
0: Buffer Vdc until undervoltage, n<p1257 -> F07405
1: Buff. Vdc until undervolt., n<p1257 -> F07405, t>p1255 -> F07406
Dependency: See also: F07405, F07406

p1257[0...n] Vdc_min controller speed threshold / Vdc_min n_thr

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Functions	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	210000.00 [rpm]	50.00 [rpm]

Description: Sets the speed threshold for the Vdc-min controller (kinetic buffering).

If this value is exceeded a fault is output; the required response can be parameterized .

Kinetic buffering is not started below the speed threshold.

Note: Exiting the Vdc_min control before reaching motor standstill prevents the regenerative braking current from increasing significantly at low speeds, and after a pulse inhibit, means that the motor coasts down.

However, the maximum braking torque can be set via the appropriate torque limiting.

r1258 CO: Vdc controller output / Vdc_ctrl output

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6220
P group: Functions	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the actual output of the Vdc controller (DC link voltage controller)

Note: The regenerative power limit p1531 is used for vector control to precontrol the Vdc_max controller. The lower the power limit is set, the lower the correction signals of the controller when the voltage limit is reached.

p1260 Bypass configuration / Bypass config

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	3	0

Description: Sets the configuration for the bypass function.

Value:
0: Bypass deactivated
1: Bypass with synchronization and overlap
2: Bypass with synchronization without overlap
3: Bypass without synchronization

Note: If the bypass function is selected (p1260 > 0), then when the power unit restarts after POWER OFF, the state of the bypass switch is evaluated. This means that after the ramp-up, it is possible to directly change into the standby mode. This is only possible for p1267 = 1 (bypass using the control signal) and if the control command after the system has been booted is still available (p1266). This function has a higher priority than the automatic restart function (p1210).

The "bypass" function can only be switched off again (p1260 = 0) if the bypass is not active or the bypass function has a fault.

The corresponding function should be activated in p3800 for bypass with synchronization.

r1261.0...12 CO/BO: Bypass control/status word / Bypass STW / ZSW

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Control and feedback signals of the bypass switch.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Command switch motor - power unit	Close	Open	-
01	Command switch motor - line supply	Close	Open	-
02	Synchronization requested	Yes	No	-
03	Staging status	Active	Not active	-
05	Feedback signal switch motor - power unit	Closed	Opened	-
06	Feedback signal switch motor - line supply	Closed	Opened	-
07	Bypass command (from p1266)	Yes	No	-
08	Feedback signal synchronization completed (from p1268)	Yes	No	-
09	Staging requested (from p2369)	Yes	No	-
10	Bypass in process sequence	Yes	No	-
11	Bypass enabled	Yes	No	-
12	DC link voltage monitoring activated	Yes	No	-

Dependency: See also: p1200, p2369

Note: Control bits 0 and 1 should be interconnected to the signal outputs via which the switches in the motor feeder cables should be controlled. These should be selected/dimensioned for switching under load.

For bit 12:

The DC link voltage monitoring is only available for a synchronized bypass. The overcurrent monitoring is also activated together with the DC link voltage monitoring. For debypass, monitoring is only activated if "Flying restart" is activated.

p1262[0...n] Bypass dead time / Bypass t_dead

VECTOR_G (Tech_ctrl)

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 2
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: - | **Unit group:** - | **Unit selection:** -
Not for motor type: RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.000 [s]	20.000 [s]	1.000 [s]

Description: Sets the dead time for non-synchronized bypass.

Note: This parameter is used to define the changeover time of the contactors. It should not be shorter than the de-magnetizing time of the motor (p0347).

The total time for switching over to line operation or returning back to converter operation is obtained from the sum of p1262 and the monitoring time of the relevant switch (p1274[x]).

p1263 Debypass delay time / Debypass t_del

VECTOR_G (Tech_ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** -
P group: - | **Unit group:** - | **Unit selection:** -
Not for motor type: RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.000 [s]	300.000 [s]	1.000 [s]

Description: Sets the delay time for switching back to converter operation for a non-synchronized bypass (time between resetting the bypass command and "Command switch motor - line supply" p1261.1).

p1264 Bypass delay time / Bypass t_del

VECTOR_G (Tech_ctrl)

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** -
P group: - | **Unit group:** - | **Unit selection:** -
Not for motor type: RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.000 [s]	300.000 [s]	1.000 [s]

Description: Sets the delay time for switching to line operation for a non-synchronized bypass (time between setting the bypass command and "Command switch motor - power unit" p1261.0).

p1265 Bypass speed threshold / Bypass n_thr

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL, RESM	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	210000.00 [rpm]	1480.00 [rpm]

Description: Sets the speed threshold to activate the bypass.

Dependency: If the drive setpoint speed is entered via a motorized potentiometer, then the configuration bit p1030.4 should be set in order to ensure the bypass via speed threshold function.

Note: When selecting p1260 = 3 and p1267.1 = 1, the bypass is automatically activated when this speed is reached.

p1266 BI: Bypass control command / Bypass command

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for the control command to the bypass.

p1267 Bypass changeover source configuration / Chgov_src config

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 bin

Description: Sets the cause that should initiate the bypass.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Bypass via signal (BI: p1266)	Yes	No	-
01	Bypass via reaching the speed threshold	Yes	No	-

Note: The parameter only has an effect for a non-synchronized bypass.

p1267.0 = 1:

The bypass is initiated by setting a binary signal. When the command is reset, after the debypass delay time (p1263) has expired, operation at the power unit is re-selected.

p1267.1 = 1:

When the speed threshold entered in p1265 is reached, the bypass is switched in. The system only switches back when the speed setpoint again falls below the threshold value.

p1268 BI: Bypass feedback synchronization completed / FS sync compl

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	3819.2

Description: Sets the signal source for the feedback signal "synchronization completed" for the bypass function.

Dependency: See also: r3819

p1269[0...1] BI: Bypass switch feedback signal / Bypass FS

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for the feedback signal of the bypass switch.

Index: [0] = Switch motor/drive
[1] = Switch motor/line supply

Note: In the case of switches without a feedback signal, interconnect the corresponding control bit as the signal source:
BI: p1269[0] = r1261.0
BI: p1269[1] = r1261.1

p1270[0...n] Flying restart configuration / FlyRest config

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 0000 0000 bin

Description: Sets the configuration for the "flying restart function" function.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Fast flying restart with voltage model for induction motor	Yes	No	-
01	PLL expansion for fast flying restart w/ voltage model for ASM	Yes	No	-
12	Siemens internal	Yes	No	-
13	Siemens internal	ON	OFF	-
14	Siemens internal	ON	OFF	-
15	Siemens internal	ON	OFF	-

Caution: For bit 00 = 1:
When using a dv/dt filter, it is not permissible that a flying restart with voltage model is activated.

Notice: For bit 00:
When selecting - also for U/f characteristic operation - a standstill measurement to identify the motor data must have been performed to set the necessary current controller for a fast flying restart.

Note: ASM: Induction motor
PMSM: permanent-magnet synchronous motor
For bit 00:
This bit is equivalent to p1780 bit 11.
For bit 01:
This bit should only be set when required for large drives.

p1271[0...n] Flying restart maximum frequency for the inhibited direction / FlyRest f_max dir

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [Hz]	650 [Hz]	0 [Hz]

Description: Sets the maximum search frequency for a flying restart in an inhibited setpoint direction (p1110, p1111).

Note: The parameter has no effect for an operating mode, which only searches in the setpoint direction (p1200 > 3).

p1272 Simulation mode / Simulation mode

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: In the simulation mode, the closed-loop control or U/f control can be operated without motor.

The simulation mode is used to test the power unit. Even though the DC link voltage is missing, the pulses are enabled when switching on. The DC link precharging is bypassed and the undervoltage detection is disabled.

Closed-loop speed control with an encoder is possible if the torque setpoint (r0079) is used in order to operate a second drive in the closed-loop torque controlled mode.

Value:
0: OFF
1: ON

Dependency: The following functions are deactivated in the simulation mode:

- motor data identification routine
- motor data identification routine, rotating without encoder
- pole position identification

For U/f control and sensorless vector control, flying restart is not carried out (refer to p1200).

See also: r0192, p1900, p1910, p1960, p1990

See also: A07825, F07826

Notice: In simulation mode, binector output r0863.1 = 1 is set. This is why you need to check whether other devices are switched on via this signal before activating simulation mode. You might need to disconnect the corresponding BICO interconnection temporarily.

Note: Simulation mode is only possible for DC link voltages below 40 V. In order that the closed-loop control can be calculated, the displayed DC link voltage (r0026, r0070) is set to the rated DC link voltage (refer to p0210). Closed-loop current control and motor model are switched out (disabled) - the same is true for the speed controller for encoderless closed-loop speed control.

When fault messages occur, the parameter is not automatically reset. This function is not implemented for SINAMICS GM.

p1274[0...1] Bypass switch monitoring time / Switch t_mon

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	5000 [ms]	1000 [ms]

Description: Sets the monitoring time for the bypass switch.

Index:
[0] = Switch motor/drive
[1] = Switch motor/line supply

Dependency: See also: p1260

Note: The monitoring is deactivated with p1274 = 0 ms.

For non-synchronized bypass (p1260 = 3), the following applies:

The changeover time for the bypass (p1262) is extended by the value in this parameter.

p1275 Motor holding brake control word / Brake STW

VECTOR_G (Ext brake)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 bin

Description: Sets the control word for the motor holding brake.

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	Inversion BI: 1219[0]	Yes	No	2707
	01	Inversion BI: 1219[1]	Yes	No	2707
	02	Inversion BI: 1224[0]	Yes	No	2704
	03	Inversion BI: 1224[1]	Yes	No	2704
	05	Brake with feedback	Yes	No	2711
	06	Enable with feedback signal	Yes	No	2711

Note: For p1275.6 = 1 and p1275.5 = 1, the following applies:

The pulse enable (BO: r1229.3) is independent of the timer that has been set (p1217, p1216). The particular enable is only defined by the feedback signal (BI: p1222, BI: p1223). The timers (p1216, p1217) only influence the alarm A07931 "Brake does not open" and A07932 "Brake does not close".

p1276 Motor holding brake standstill detection bypass / Brk standst bypass

VECTOR_G (Ext brake)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2704
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	300.000 [s]	300.000 [s]

Description: Sets the delay time for closing the brake at standstill.

After this time has expired, if the "close brake at standstill" or OFF1/OFF3 is present, the brake is closed and the pulses are suppressed.

For p1276 = 300.000 s, the timer is deactivated - this means that the timer output is always zero.

p1277 Motor holding brake braking threshold delay exceeded / Del thr exc

VECTOR_G (Ext brake)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2707
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	300.000 [s]	0.000 [s]

Description: Sets the delay time for the signal "braking threshold exceeded" (BO: r1229.6).

Dependency: See also: p1220, p1221, r1229

p1278 Brake control diagnostics evaluation / Brake diagnostics

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Sets the brake control type (with or without diagnostics evaluation).

Example for brake control with diagnostics evaluation.

- brake control in the Motor Modules in booksize format
- Safe Brake Relay for AC Drive

Example for brake control without diagnostics evaluation.

- Brake Relay for AC Drive

Value:
0: Brake control with diagnostics evaluation
1: Brake control without diagnostics evaluation

Note: If the configuration of the motor holding brake (p1215) is set to "no holding brake present" when booting, then an automatic identification of the motor holding brake will be carried out. If a brake control is detected without diagnostics evaluation (e.g. Brake Relay for AC Drive), then the parameter is set to "brake control without diagnostics evaluation".

It is not permissible to parameterize "brake control without diagnostics evaluation" and also enable "safe brake control" (p1278 = 1, p9602 = 1, p9802 = 1).

p1279[0...3] BI: Motor holding brake OR/AND logic operation / Brake OR AND

VECTOR_G (Ext brake)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 2707
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for the OR/AND logic operation.

Dependency: See also: r1229

Note: [0]: OR logic operation, input 1 --> the result is displayed in r1229.10.
[1]: OR logic operation, input 2 --> the result is displayed in r1229.10.
[2]: AND logic operation, input 1 --> the result is displayed in r1229.11.
[3]: AND logic operation, input 2 --> the result is displayed in r1229.11.

p1280[0...n] Vdc controller or Vdc monitoring configuration (U/f) / Vdc_ctr config U/f

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 6300, 6320
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	6	1

Description: Sets the configuration of the controller for the DC link voltage (Vdc controller) in the U/f operating mode.

Value:
0: Inhibit Vdc ctrl
1: Enable Vdc_max controller
2: Enable Vdc_min controller (kinetic buffering)
3: Enable Vdc_min controller and Vdc_max controller
4: Activate Vdc_max monitoring
5: Activate Vdc_min monitoring
6: Activate Vdc_min monitoring and Vdc_max monitoring

Warning:

When the Vdc_max controller is active, the motor can be accelerated (e.g. by driving loads or as a result of high DC link voltages). This can be caused by other drives that are operating on a common DC link busbar.

Caution:

If several drives are operated from the same DC link busbar, then it is recommended that the Udc control is only activated for the drives with relatively high moments of inertia.

If the Udc controls for various drives are simultaneously active, then they can mutually influence one another. In this case, the controller dynamic performance should be reduced or the Udc control of individual drives should be deactivated.

Drives with Udc control must be able to brake and accelerate independently of one another.

Note: For p1280 = 4, 5, 6:

When the threshold in r1282 or r1286 is reached, the DC link voltage monitoring initiates a fault (F07403 or F07404) with a response and therefore reduces additional negative effects on the DC link voltage.

If a braking resistor is connected to the DC link, then the Vdc_max control should be disabled.

For p1280 = 1, 3:

Only U/f control: When the Vdc max controller is active, fault F07404 is initiated if the speed setpoint ramp is stopped (held) longer than the time set in p1284.

p1281[0...n] Vdc controller configuration / Vdc ctrl config

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 bin

Description: Sets the configuration for the DC link voltage controller.

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	Vdc min control (U/f) without up ramp	Yes	No	-
	02	Vdc min shorter wait time when the line returns	Yes	No	-

Note: ASM: Induction motor (induction motor)
PMSM: permanent-magnet synchronous motor
For bit 00:
This bit is equivalent to p1780 bit 1.
For bit 01:
This bit should only be set when required for large drives.

r1282 Vdc_max controller switch-in level (U/f) / Vdc_max on_level

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6320
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_max controller.
If p1294 = 0 (automatic sensing of the switch-in level = off), then the following applies:
AC/AC device: r1282 = 1.15 * sqrt(2) * p0210
DC/AC device: r1282 = 1.15 * p0210
If p1294 = 1 (automatic sensing of the switch-in level = on), then the following applies:
r1282 = Vdc_max - 50.0 V (Vdc_max: Overvoltage threshold of the power unit)
r1282 = Vdc_max - 25.0 V (for 230 V power units)

Notice: If the activation level of the Vdc_max controller is already exceeded in the deactivated state (pulse inhibit) by the DC link voltage, then the controller can be automatically deactivated (see F07401), so that the drive is not accelerated the next time that it is activated.

Note: The Vdc_max controller is not switched back off until the DC link voltage falls below the threshold 0.95 * r1282 and the controller output is zero.

p1283[0...n] Vdc_max controller dynamic factor (U/f) / Vdc_max dyn_factor

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6320
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the DC link voltage controller (Vdc_max controller).
100% means that p1290, p1291, and p1292 (gain, integral time, and rate time) are used in accordance with their basic settings and on the basis of a theoretical controller optimization.
If subsequent optimization is required, this can be carried out using the dynamic factor. In this case, p1290, p1291, and p1292 are weighted with the dynamic factor p1283.
If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.

Note: The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.

p1284[0...n] Vdc_max controller time threshold (U/f) / Vdc_max t_thr

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [s]	300.000 [s]	4.000 [s]

Description: Sets the monitoring time for the Vdc_max controller.
If the down ramp of the speed setpoint is held for longer than the time set in p1284, then fault F07404 is output.

p1285[0...n] Vdc_min controller switch-in level (kinetic buffering) (U/f) / Vdc_min on_level

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3

	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	65 [%]	150 [%]	76 [%]

Description: Sets the switch-in level for the Vdc-min controller (kinetic buffering).
The value is obtained as follows:
AC/AC device: r1286[V] = p1285[%] * sqrt(2) * p0210
DC/AC device: r1286[V] = p1285[%] * p0210

Warning: An excessively high value may adversely affect normal drive operation. The values up to 150 % are intended for operating modes p1240 = 5, 6.

r1286 Vdc_min controller switch-in level (kinetic buffering) (U/f) / Vdc_min on_level

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6320
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [V]	- [V]	- [V]

Description: Displays the switch-in level for the Vdc_min controller (kinetic buffering).

Note: The Vdc_min controller is not switched back off until the DC link voltage rises above the threshold 1.05 * r1286 and the controller output is zero.

p1287[0...n] Vdc_min controller dynamic factor (kinetic buffering) (U/f) / Vdc_min dyn_factor

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6320
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1 [%]	10000 [%]	100 [%]

Description: Sets the dynamic factor for the Vdc_min controller (kinetic buffering).
100% means that p1290, p1291, and p1292 (gain, integral time, and rate time) are used corresponding to their basic settings and based on a theoretical controller optimization.
If subsequent optimization is required, this can be carried out using the dynamic factor. In this case, p1290, p1291, and p1292 are weighted with the dynamic factor p1287.
If several modules are connected to the DC link, then the dynamic factor must be increased corresponding to the ratio of the additional capacitances to the capacitance of the module involved.

Note: The pre-setting of the dynamic factor is based on the power units connected to DRIVE-CLiQ. It is assumed that the power units connected via DRIVE-CLiQ are also electrically connected to the DC link. If this is not the case, then the dynamic factor must be optimized manually.

p1288[0...n] Vdc_max controller feedback coupling factor ramp-fct. gen. (U/f) / Vdc_max factor RFG

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000	100.000	0.500

Description: Sets the feedback factor for the ramp-function generator.
Its ramp times are decelerated relative to the output signal of the Vdc_max controller.

Note: For values p1288 = 0.0 to 0.5, the controller dynamics are automatically adapted internally.

p1289[0...n] Vdc_max controller speed threshold (U/f) / Vdc_max n_thr

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Functions	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	10.00 [rpm]

Description: Sets the lower speed threshold for the Vdc_max controller.
When this speed threshold is undershot, the Vdc_max control is switched out and the speed is controlled using the ramp-function generator.

p1290[0...n] Vdc controller proportional gain (U/f) / Vdc_ctrl Kp

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6320
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00	100.00	1.00

Description: Sets the proportional gain for the Vdc controller (DC link voltage controller).

Note: The gain factor is proportional to the capacitance of the DC link. The parameter is pre-set to a value that is optimally adapted to the capacitance of the individual Motor Module. The capacitances of the other power units which are connected to the DC link can be taken into account using the dynamic factor (p1287 or p1283).

p1291[0...n] Vdc controller integral time (U/f) / Vdc_ctrl Tn

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6320
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	10000 [ms]	40 [ms]

Description: Sets the integral time for the Vdc controller (DC link voltage controller).

p1292[0...n] Vdc controller rate time (U/f) / Vdc_ctrl Tv

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6320
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	1000 [ms]	10 [ms]

Description: Sets the rate time constant for the Vdc controller (DC link voltage controller).

p1293[0...n] Vdc min controller output limit (U/f) / Vdc_min outp_lim

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6320
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Hz]	600.00 [Hz]	10.00 [Hz]

Description: Sets the output limit for the Vdc min controller (DC link undervoltage controller).

p1294 Vdc_max controller automatic detection ON signal level (U/f) / Vdc_max SenseOnLev

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Activates/deactivates the automatic sensing of the switch-in level for the Vdc_max controller. When the sensing function is deactivated, the activation threshold r1282 for the Vdc_max controller is determined from the parameterized connection voltage p0210.

Value:
0: Automatic detection inhibited
1: Automatic detection enabled

p1295[0...n] Vdc_min controller time threshold (U/f) / Vdc_min t_thr

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [s]	10000.000 [s]	0.000 [s]

Description: Sets the time threshold for the Vdc_min controller (kinetic buffering).
If this value is exceeded a fault is output; the required response can be parameterized.
Prerequisite: p1296 = 1

Notice: If a time threshold has been parameterized, the Vdc_max controller should also be activated (p1280 = 3) so that the drive does not shut down with overvoltage when Vdc_min control is exited (due to the time violation) and in the event of fault response OFF3. It is also possible to increase the OFF3 ramp-down time p1135.

p1296[0...n] Vdc_min controller response (kinetic buffering) (U/f) / Vdc_min response

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Sets the response for the Vdc_min controller (kinetic buffering).

Value:
0: Buffer Vdc until undervoltage, n<p1297 -> F07405
1: Buff. Vdc until undervolt., n<p1297 -> F07405, t>p1295 -> F07406

Note: For p1296 = 1:
The quick stop ramp entered in p1135 must not be equal to zero, to prevent overcurrent shutdown if F07406 is triggered.

p1297[0...n] Vdc_min controller speed threshold (U/f) / Vdc_min n_thr

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Functions	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	50.00 [rpm]

Description: Sets the speed threshold for the Vdc-min controller (kinetic buffering).

If this value is exceeded a fault is output; the required response can be parameterized .

Note: Exiting the Vdc_min control before reaching motor standstill prevents the regenerative braking current from increasing significantly at low speeds, and after a pulse inhibit, means that the motor coasts down.

r1298 CO: Vdc controller output (U/f) / Vdc_ctrl output

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6320
	P group: Functions	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the actual output of the Vdc controller (DC link voltage controller)

p1300[0...n] Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode

VECTOR_G	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 6300, 6301, 8012
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	19	0

Description: Sets the U/f control mode of the drive.

Value:
0: U/f control with linear characteristic
1: U/f control with linear characteristic and FCC
2: U/f control with parabolic characteristic
3: U/f control with parameterizable characteristic
4: U/f control with linear characteristic and ECO
5: U/f control for drives requiring a precise freq. (e.g. textiles)
6: U/f control for drives requiring a precise frequency and FCC
7: U/f control for a parabolic characteristic and ECO
15: Operation with braking resistor
19: U/f control with independent voltage setpoint

Recommendation: The use of the vector control operating modes is recommended for synchronous motors.

Dependency: If you are working with reduced supply voltages (p0212.0 = 1), only U/f control with independent voltage setpoint (p1300 = 19) can be set as the operating mode.

p1300 = 15 (operation with braking resistor), can only be activated or deactivated in quick commissioning (p0010 = 1). This operating mode is only possible for chassis power units (DC/AC Motor Module).

Notice: Active slip compensation is required in the U/f control types with Eco mode (p1300 = 4, 7). Slip compensation scaling (p1335) must be set so that the slip is completely compensated (or generally, 100 %).

The Eco mode is only effective in steady-state operation and when the ramp-function generator is not bypassed. In the case of analog setpoints, if required the tolerance for ramp-up and ramp-down should be actively increased for the ramp-function generator using p1148 in order to reliably signal a steady-state condition.

Note: The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the actual state is displayed in r1407, bit 2 and bit 3.

For motors, type p0300 = 6, 14, 6xx, the following applies:

Operation with U/f control is only recommended for diagnostic purposes.

p1300[0...n] Open-loop/closed-loop control operating mode / Op/cl-lp ctrl_mode

VECTOR_G (n/M)	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 6300, 6301, 8012
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	23	20

Description: Sets the open and closed-loop control mode of a drive.

Value:
0: U/f control with linear characteristic
1: U/f control with linear characteristic and FCC
2: U/f control with parabolic characteristic
3: U/f control with parameterizable characteristic
4: U/f control with linear characteristic and ECO
5: U/f control for drives requiring a precise freq. (e.g. textiles)
6: U/f control for drives requiring a precise frequency and FCC
7: U/f control for a parabolic characteristic and ECO
15: Operation with braking resistor
18: I/f control with fixed current
19: U/f control with independent voltage setpoint
20: Speed control (encoderless)
21: Speed control (with encoder)
22: Torque control (encoderless)
23: Torque control (with encoder)

Recommendation: The use of the vector control operating modes is recommended for synchronous motors.

Dependency: Closed-loop speed or torque control (with encoder) cannot be selected if the encoder type is not entered (p0400).

Closed-loop speed or torque control can be selected if the closed-loop speed/torque control was selected as operating mode (p0108.2).

Only operation with U/f characteristic is possible if the rated motor speed is not entered (p0311).

A reluctance motor (p0300 = 8) can only be operated in a U/f control mode (p1300 < 20), a synchronous-reluctance motor (p0300 = 6, 6xx) only in closed-loop speed/torque control.

Sensorless control on separately excited synchronous motors is only possible with a VSM module (see p0150, p0151).

For chassis power units with reduced line voltage (see r0212.0), the drive can only be operated in a control mode (p1300 = 20...23) and with the DC link voltage control activated.

See also: r0108, p0212, p0300, p0311, p0400, p1501

Notice: Active slip compensation is required in the U/f control types with Eco mode (p1300 = 4, 7). Slip compensation scaling (p1335) must be set so that the slip is completely compensated (or generally, 100 %).

The Eco mode is only effective in steady-state operation and when the ramp-function generator is not bypassed. In the case of analog setpoints, if required the tolerance for ramp-up and ramp-down should be actively increased for the ramp-function generator using p1148 in order to reliably signal a steady-state condition.

Note: The closed-loop torque control can only be changed over in operation (p1300 = 20, 21) by selecting the closed-loop speed control (p1501). At the changeover, the setting of p1300 does not change. In this case, the actual state is displayed in r1407, bit 2 and bit 3.

For the open-loop control modes p1300 = 5 and 6 (textile sector), slip compensation p1335, resonance damping p1338, and the Imax frequency controller are switched off internally so that the output frequency can be set precisely. The Imax voltage controller remains active.

For the open-loop control modes p1300 = 4 and 7 (Eco mode), the efficiency can be optimized by varying the voltage (when the operating point is constant).

Separately excited synchronous motors can only be operated in modes p1300 = 20, 21 and 23 - or for diagnostic purposes in modes p1300 = 0, 3 and 18. For I/f control (p1300 = 18), the current amplitude can be set using p1609. Both for U/f as well as for I/f control only a small load may be applied to the separately excited synchronous motor because the excitation current is not calculated as a function of the load.

During operation (pulses enabled) the open-loop/closed-loop control mode cannot be changed by changing over drive data sets.

p1300 is pre-assigned depending on r0108.2 and p0187.

p1302[0...n] U/f control configuration / U/f config

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 bin

Description: Sets the configuration for the U/f control.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Output voltage starting angle zero	Yes	No	-
01	Take into account the setpoint voltage sign	Yes	No	-
02	Output voltage angle setpoint input	Yes	No	-
04	Field orientation	Yes	No	-
06	Immediate setpoint transfer for pulse inhibit	Yes	No	-

Note: For bit 00:

If the bit is set the device will always start up with setpoint angle zero on pulse enable. This also affects the setpoint angle for DC braking (p1231).

For bit 01:

If the bit is set, in the case of U/f control with independent voltage setpoint (p1300 = 19) and negative setpoint voltages at the input of p1330, the setpoint angle is rotated through 180 degrees, thereby achieving a negative output voltage. The voltage boost is in this case not active (p1310, p1311).

For bit 02:

When the bit is set, for U/f controls with independent voltage setpoint (p1300 = 19), the setpoint angle should be entered directly at connector input p1356.

For bit 06 (only for p1300 = 19):

When the bit is set, the setpoints from p1330 for pulse inhibit are transferred without any delay.

p1310[0...n] Starting current (voltage boost) permanent / I_start (Ua) perm

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6300, 6301
P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [%]	250.0 [%]	50.0 [%]

Description: Defines the voltage boost as a [%] referred to the rated motor current (p0305).

The magnitude of the permanent voltage boost is reduced with increasing frequency so that at the rated motor frequency, the rated motor voltage is present.

The magnitude of the boost in Volt at a frequency of zero is defined as follows:

Voltage boost [V] = 1.732 x p0305 (rated motor current [A]) x r0395 (stator/primary section resistance [ohm]) x p1310 (permanent voltage boost [%]) / 100 %

At low output frequencies, there is only a low output voltage in order to maintain the motor flux. However, the output voltage can be too low in order to achieve the following:

- magnetize the induction motor.
- hold the load.
- compensate for losses in the system.

This is the reason that the output voltage can be increased using p1310.

The voltage boost can be used for both linear as well as square-law U/f characteristics.

Dependency: The starting current (voltage boost) is limited by the current limit p0640.

The accuracy of the starting current depends on the setting of the stator and feeder cable resistance (p0350, p0352).

See also: p1300, p1311, p1312, r1315

Notice: The starting current (voltage boost) increases the motor temperature (particularly at zero speed).

Note: The starting current as a result of the voltage boost is only effective for U/f control (p1300).

The boost values are combined with one another if the permanent voltage boost (p1310) is used in conjunction with other boost parameters (acceleration boost (p1311), voltage boost for starting (p1312)).

However, these parameters are assigned the following priorities: p1310 > p1311, p1312

p1311[0...n] Starting current (voltage boost) when accelerating / I_start accel

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6300, 6301
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	250.0 [%]	0.0 [%]

Description: p1311 only results in a voltage boost when accelerating and generates a supplementary torque to accelerate the load.

The voltage boost becomes effective for a positive setpoint increase, and is withdrawn once the setpoint has been reached.

The build-up and withdrawal of the voltage boost are smoothed.

The magnitude of the boost in Volt at a frequency of zero is defined as follows:

Voltage boost [V] = 1.732 * p0305 (rated motor current [A]) x r0395 (stator/primary section resistance [ohm]) x p1311 (voltage boost when accelerating [%]) / 100 %

Dependency: The current limit p0640 limits the boost.

See also: p1300, p1310, p1312, r1315

Notice: The voltage boost results in a higher motor temperature increase.

Note: The voltage boost when accelerating can improve the response to small, positive setpoint changes.

Assigning priorities for the voltage boosts: refer to p1310

p1312[0...n] Starting current (voltage boost) when starting / I_start start

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6300, 6301

0.0 [Vrms]	10000.0 [Vrms]	0.0 [Vrms]

Description: The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310.
This parameter specifies the voltage of the first point along the characteristic.

Dependency: Selects the freely programmable characteristic using p1300 = 3.
See also: p1310, p1311, p1320, p1322, p1323, p1324, p1325, p1326, p1327

Note: Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327.
The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.

p1322[0...n] U/f control programmable characteristic frequency 2 / Uf char f2

VECTOR_G

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6301
P group: V/f open-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310.
This parameter specifies the voltage of the second point along the characteristic.

Dependency: The following applies to the frequency values: p1320 <= p1322 <= p1324 <= p1326. Otherwise, a standard characteristic is used that contains the rated motor operating point.
See also: p1310, p1311, p1320, p1321, p1323, p1324, p1325, p1326, p1327

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.0 [Vrms]	10000.0 [Vrms]	0.0 [Vrms]

Description: The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310.
This parameter specifies the voltage of the third point along the characteristic.

Dependency: See also: p1310, p1311, p1320, p1321, p1322, p1323, p1324, p1326, p1327

p1326[0...n] U/f control programmable characteristic frequency 4 / Uf char f4

VECTOR_G

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6301
P group: V/f open-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.00 [Hz]	10000.00 [Hz]	0.00 [Hz]

Description: The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310.
This parameter specifies the frequency of the fourth point along the characteristic.

Dependency: Selects the freely programmable characteristic using p1300 = 3.
The following applies for the frequency values:
p1320 <= p1322 <= p1324 <= p1326
Otherwise, a standard characteristic is used that contains the rated motor operating point.
See also: p1310, p1311, p1320, p1321, p1322, p1323, p1324, p1325, p1327

Note: Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327. For output frequencies above p1326, the characteristic is extrapolated with the gradient between the characteristic points p1324/p1325 and p1326/p1327.
The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.

p1327[0...n] U/f control programmable characteristic voltage 4 / Uf char U4

	Min:	**Max:**	**Factory setting:**
	0.0 [Vrms]	10000.0 [Vrms]	0.0 [Vrms]

Description: The programmable characteristic for the U/f control is defined using 4 points and 0 Hz/p1310.
This parameter specifies the voltage of the fourth point along the characteristic.

Dependency: Selects the freely programmable characteristic using p1300 = 3.
See also: p1310, p1311, p1320, p1321, p1322, p1323, p1324, p1325, p1326

Note: Linear interpolation is carried out between the points 0 Hz/p1310, p1320/p1321 ... p1326/p1327.
The voltage boost when accelerating (p1311) is also applied to the freely programmable U/f characteristic.

p1330[0...n] CI: U/f control independent voltage setpoint / Uf U_set independ.

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6301
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the voltage setpoint for U/f control with an independent voltage setpoint (p1300 = 19).

Dependency: Selects the U/f control with independent voltage setpoint via p1300 = 19.
See also: p1300

p1331[0...n] Voltage limiting / U_lim

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6300
	P group: -	**Unit group:** 5_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	50.00 [Vrms]	2000.00 [Vrms]	1000.00 [Vrms]

Description: Limiting the voltage setpoint.
This means that the output voltage can be reduced with respect to the calculated maximum voltage r0071 and the start of field weakening.

Note: The output voltage is only limited if, as a result of p1331, the maximum output voltage (r0071) is fallen below.

p1333[0...n] U/f control FCC starting frequency / U/f FCC f_start

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6301
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: Sets the starting frequency at which FCC (Flux Current Control) is activated.

Dependency: The correct operating mode must be set (p1300 = 1, 6).

Warning: An excessively low value can result in instability.

Note: For p1333 = 0 Hz, the FCC starting frequency is automatically set to 6 % of the rated motor frequency.

p1334[0...n] U/f control slip compensation starting frequency / Slip comp start

VECTOR_G

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6310
P group: V/f open-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
0.00 [Hz] | 3000.00 [Hz] | 0.00 [Hz]

Description: Sets the starting frequency of the slip compensation.

Note: For p1334 = 0, the starting frequency of the slip compensation is automatically set to 6 % of the rated motor frequency.

p1335[0...n] Slip compensation scaling / Slip comp scal

VECTOR_G

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 2
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6300, 6310
P group: V/f open-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
0.0 [%] | 600.0 [%] | 0.0 [%]

Description: Sets the setpoint for slip compensation in [%] referred to r0330 (motor rated slip).
p1335 = 0.0 %: Slip compensation deactivated.
p1335 = 100.0 %: The slip is completely compensated.

Dependency: Prerequisite for a precise slip compensation for p1335 = 100 % are the precise motor parameters (p0350 ... p0360).
If the parameters are not precisely known, a precise compensation can be achieved by varying p1335.
For U/f control modes with ECO optimization (p1300 = 4, 7), slip compensation must be activated in order to guarantee correct operation.

Note: The purpose of slip compensation is to maintain a constant motor speed regardless of the applied load. The fact that the motor speed decreases with increasing load is a typical characteristic of induction motors.
For synchronous motors, this effect does not occur and the parameter has no effect in this case.
For U/f control modes, for textile applications (p1300 = 5, 6), slip compensation is internally deactivated, allowing the output frequency to be precisely adjusted.
If p1335 is changed during commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1335 have been changed by a parameter that was set when the drive was commissioned (e.g. p0300).

p1336[0...n] Slip compensation limit value / Slip comp lim val

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 2
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6310
P group: V/f open-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
0.00 [%] | 600.00 [%] | 250.00 [%]

Description: Sets the limit value for slip compensation in [%] referred to r0330 (motor rated slip).

r1337 CO: Actual slip compensation / Slip comp act val

VECTOR_G

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** 6310
P group: V/f open-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: PMSM, REL, RESM | **Scaling:** PERCENT | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- [%] | - [%] | - [%]

Description: Displays the actual compensated slip [%] referred to r0330 (rated motor slip).

Dependency: p1335 > 0 %: Slip compensation active.
See also: p1335

p1338[0...n] U/f mode resonance damping gain / Uf Res_damp gain

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6300, 6310
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00	100.00	0.00

Description: Sets the gain for resonance damping for U/f control.

Dependency: See also: p1300, p1339, p1349

Note: The resonance damping function dampens active current oscillations that frequency occur under no-load conditions.

The resonance damping is active in a range from approximately 6 % of the rated motor frequency (p0310). The shutoff frequency is determined by p1349.

For the open-loop control modes p1300 = 5 and 6 (textile sectors), the resonance damping is internally disabled in order that the output frequency can be precisely set.

p1339[0...n] U/f mode resonance damping filter time constant / Uf Res_damp Tc

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6310
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1.00 [ms]	1000.00 [ms]	20.00 [ms]

Description: Sets the filter time constant for resonance damping for U/f control.

Dependency: See also: p1300, p1338, p1349

p1340[0...n] I_max frequency controller proportional gain / I_max_ctrl Kp

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6300
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000	0.500	0.000

Description: Sets the proportional gain of the I_max frequency controller.

The I_max controller reduces the drive converter output current if the maximum current (r0067) is exceeded.

In the U/f operating modes (p1300) for the I_max control, one controller is used that acts on the output frequency and one controller that acts on the output voltage. The frequency controller reduces the current by decreasing the converter output frequency. The frequency is reduced down to a minimum value (equaling twice rated slip). If the overcurrent condition cannot be successfully resolved using this measure, then the drive converter output voltage is reduced using the I_max voltage controller. Once the overcurrent condition has been resolved, the drive is accelerated along the ramp set in p1120 (ramp-up time).

Dependency: In the U/f modes (p1300) for textile applications and for external voltage setpoints, only the I_max voltage controller is used.

Notice: When deactivating the I_max controller, the following must be carefully observed:

When the maximum current (r0067) is exceeded, the output current is no longer reduced. The drive is switched off when the overcurrent limits are exceeded.

Note: The I_max limiting controller becomes ineffective if the ramp-function generator is deactivated with p1122 = 1.

p1341 = 0:

I_max frequency controller deactivated and I_max voltage controller activated over the complete speed range.

p1341[0...n] I_max frequency controller integral time / I_max_ctrl Tn

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6300
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [s]	50.000 [s]	0.300 [s]

Description: Sets the integral time for the I_max frequency controller.
Dependency: See also: p1340
Note: When p1341 = 0, the current limiting controller influencing the frequency is deactivated and only the current limiting controller influencing the output voltage remains active (p1345, p1346).

r1343 CO: I_max controller frequency output / I_max_ctrl f_outp

	Min:	**Max:**	**Factory setting:**
	0.000	100000.000	0.000

Description: Sets the proportional gain for the I_max voltage controller.
Dependency: See also: p1340
Note: The controller settings are also used in the current controller of the DC braking (refer to p1232).

p1346[0...n] I_max voltage controller integral time / I_max_U_ctrl Tn

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6300, 7017
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [s]	50.000 [s]	0.030 [s]

Description: Sets the integral time for the I_max voltage controller.
Dependency: See also: p1340

Note: The controller settings are also used in the current controller of the DC braking (refer to p1232).
For p1346 = 0, the following applies:
The integral time of the I_max voltage controller is deactivated.

r1348 CO: U/f control Eco factor actual value / Uf Eco fac ActV

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6300, 6301
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [%]	- [%]	- [%]

Description: Displays the economic factor determined for optimizing motor consumption.
Dependency: See also: p1335
Note: The value is only determined for operating modes with Economic (p1300 = 4, 7).

p1349[0...n] U/f mode resonance damping maximum frequency / Uf res_damp f_max

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6310
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Hz]	3000.00 [Hz]	0.00 [Hz]

Description: Sets the maximum output frequency for resonance damping for U/f control.
Resonance damping is inactive above this output frequency.
Dependency: See also: p1338, p1339
Note: For p1349 = 0, the changeover limit is automatically set to 95 % of the rated motor frequency - however, to a max. of 45 Hz.

p1350[0...n] U/f control soft start / U/f soft start

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 6300
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Sets whether the voltage is continuously increased during the magnetizing phase (p1350 = 1, On) or whether it jumps directly to the voltage boost (p1350 = 0, Off).
Value:
0: OFF
1: ON
Dependency: The function is not effective for p1300 = 15.
Note: The settings for this parameter have the following advantages and disadvantages:
0 = off (jump directly to voltage boost)
Advantage: Flux is established quickly -> torque is quickly available
Disadvantage: The motor can move while it is being magnetized
1 = on (voltage is continually established)
Advantage: The motor is unlikely to rotate
Disadvantage: The flux is established slower -> torque is available later

p1351[0...n] CO: Motor holding brake starting frequency / Brake f_start

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6310
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-300.00 [%]	300.00 [%]	0.00 [%]

Description: Sets the frequency setting value at the slip compensation output for starting up with motor holding brake.
Dependency: When setting p1351 > 0, then slip compensation is automatically activated (p1335 = 100 %).
Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.
Note: A value of 100% corresponds to the motor rated slip (r0330).

p1356[0...n] CI: U/f control angular setpoint / Uf ang setpoint

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** -

	P group: Displays, signals	**Unit group:** 5_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the actual power unit output voltage (Motor Module) in braking chopper operation.
Dependency: Select operation with braking resistor: p1300 = 15
See also: p1360, p1362, p1364
See also: A06921, F06922

p1364 Braking chopper resistor asymmetry / Brk_chop R asym

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: V/f open-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [%]	100.00 [%]	25.00 [%]

Description: Sets the percentage value for the asymmetry detection for the braking chopper.
The ripple of the absolute current r0068 is monitored.
The reference value is the average value of the absolute current.
The minimum monitoring value is 10 % of the power unit rated current.
Dependency: Select operation with braking resistor: p1300 = 15
See also: p1360, p1362, r1363
See also: F06922
Note: For p1364 = 0, asymmetry identification is deactivated.
Asymmetry can also be displayed if the absolute current manifests ripple, caused by load-related ripple of the DC link voltage. In this particular case, p1364 must be increased.

r1369[0] CO: Phase current actual value filtered / I_ph ActV filt

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6300
P group: V/f open-loop control	**Unit group:** 6_5	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [A]	- [A]	- [A]

Description: Displays the measured actual phase currents as peak value.
This value is averaged for the display in the speed controller sampling time (p0115[1]).

Index: [0] = Phase U

Dependency: The signal is only displayed in operating mode p1300 = 19 (U/f control with independent voltage setpoint) and is used to control DC currents (e.g. for excitation (field) controllers).

p1381[0...n] U/f control modulation limit reduction / U/f mod_lim red

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6723
P group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [%]	40.0 [%]	0.0 [%]

Description: Reduction of the maximum modulation depth when compared to r0073 to reduce the maximum output voltage r0071.
The maximum modulation depth is reduced no more than the ideal overcontrol limit of 100 %.

Note: If p1803 is increased for operation with closed-loop speed/torque control, then the modulation limit for operation with U/f control can in turn be reduced in order to avoid overcontrol and the associated current ripple.

p1400[0...n] Speed control configuration / n_ctrl config

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Function diagram:** 6490
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 0000 0000 1000 0000 0010 0001 bin

Description: Sets the configuration for the closed-loop speed control.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Automatic Kp/Tn adaptation active	Yes	No	6040
01	Sensorless vector control freeze I comp	Yes	No	6040
02	Acceleration precontrol signal source	External (p1495)	Internal (n_set)	6031
03	Reference model speed setpoint I component	ON	OFF	6031
05	Kp/Tn adaptation active	Yes	No	6040
06	Free Tn adaptation active	Yes	No	6050
07	Interpolation speed precontrol	Yes	No	6031
10	Speed precontrol	Yes	No	6031
14	Torque precontrol	Always active	For n_ctrl enab	6060

15	Sensorless vector control speed precontrol	Yes	No	6030
16	I component for limiting	Enable	Hold	6030
18	Moment of inertia estimator active	Yes	No	6030
19	Anti-windup for integral component	Yes	No	6030
20	Acceleration model	ON	OFF	6031
22	Obtain moment of inertia estimator value for pulse inhibit	Yes	No	6030
23	Acceleration model (with speed encoder)	Yes	No	6030
24	Moment of inertia estimator fast estimation active	Yes	No	6030
25	Acceleration torque instantaneous in the I/f mode	Yes	No	-
27	Load gearbox, take into account torque limit	No	Yes	-

Note:

For bit 01:

When the bit is set, the I component of the speed controller is kept when changing into the open-loop controlled mode.

For bit 10:

The change to the bit is only accepted when switched off (non-operational).

For bit 16:

When the bit is set, the integral component of the speed controller is only held if it reaches the torque limit.

For bit 19:

When this bit is set, speed overshoots when accelerating along the torque limit and for load surges are reduced. If the setpoint torque reaches the torque limit, then the integral component is set to the difference between the torque limit and P component.

For bits 20, 23:

The acceleration model for the speed setpoint is only active if p1496 is not zero. When the acceleration model and the ramp-function generator (p1145) are simultaneously activated, it is recommended that p1400 bit 16 is set (this allows the I component to run freely up to the torque limit).

For bit 24:

When the bit is set, assuming that the motor accelerates smoothly, the moment of inertia can be determined faster.

For bit 25:

When the bit is set, for high dynamic starting in the I/f mode, the acceleration precontrol torque smoothing only has a short minimum time (4 ms).

For bit 27:

When the bit is set, the torque limit of an existing load gearbox is not taken into account in the resulting torque limiting.

p1401[0...n] Flux control configuration / Flux ctrl config

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Function diagram:** 6491
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 0000 1110 bin

Description: Sets the configuration for flux setpoint control

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Flux setpoint soft starting active	Yes	No	6722, 6725
01	Flux setpoint differentiation active	Yes	No	6723, 6726
02	Flux build-up control active	Yes	No	6722, 6723, 6725, 6726

03	Flux characteristic load-dependent	Yes	No	6725
04	Flux controller (ASM with encoder)	Yes	No	-
05	Flux impression (ASM with encoder)	with model chngov	From 30 % n_rated	-
06	Quick magnetizing	Yes	No	6722
07	Precontrol speed limitation	Yes	No	6640
08	Speed limiting controller	With M_limits	With I_limits	6640
09	Dynamic load-dependent flux boost	Yes	No	6790, 6823
10	Flux boost low speed	Yes	No	6790, 6823
13	Precontrol characteristic (PESM)	Yes	No	-
14	Efficiency optimization 2 active	Yes	No	6722, 6837

Note:

For bit 00 (only for induction motors):

Initially, the flux is only established with a low rate of rise when magnetizing the induction motor. The flux setpoint p1570 is reached again at the end of the magnetizing time p0346.

For bit 01 (only for induction motors and separately excited synchronous motors):

The flux differentiation can be switched out if a significant ripple occurs in the field-generating current setpoint (r0075) when entering the field weakening range. However, this is not suitable for fast acceleration operations because then, the flux decays more slowly and the voltage limiting responds.

For bit 02 (only for induction motors):

The flux build-up control operates during the magnetizing phase p0346 of the induction motor. If it is switched out, a constant current setpoint is injected and the flux is built up corresponding to the rotor time constant. When quick magnetizing (p1401.6 = 1) is selected and when flux build-up control is de-energized alarm A07416 is displayed.

For bit 03:

Separately excited synchronous machine: flux characteristic is calculated as a function of the load.

Synchronous-reluctance motor (RESM): activation of the load-dependent optimum flux characteristic.

For bit 04 (only for induction motors with encoder):

The flux controller does not operate in the range of the current model and not in the range of the flux impression (refer to p1750.4).

For bit 05 (only for induction motors with encoder):

Extremely rugged control operation is possible by directly toggling between the current model and flux impression. We therefore recommend that, in addition, the time-controlled model change is switched in (p1750.4 = 1) or the model changeover limits are significantly increased (p1752 > 0.35 * p0311; p1753 = 5 %).

For bit 06 (not for induction motors):

Magnetizing is carried out with the maximum current (0.9 * r0067 <= p1603 * r0209). Magnetization has been completed if the flux threshold value p1573 or the magnetizing time p0346 has been reached. With active identification of the stator resistance (see p0621) quick magnetizing is internally deactivated and alarm A07416 is displayed. During a flying restart of a rotating motor (see p1200) no quick magnetizing takes place.

For bit 07:

If the speed of the drive exceeds the effective speed limit of the speed limiting controller, the torque limit is reduced linearly to zero as the deviation becomes greater. This reduces the integral component of the speed controller and, in turn, the overshoot during load shedding (see also F07901 and p2162).

For bit 08:

The speed limiting controller sets the speed to maximum by opening the torque limits as far as the current limits (bit 8 = 0) or taking the torque limits into account (bit 8 = 1).

For bit 09:

Synchronous reluctance motor (RESM):

Dynamic increase in the flux setpoint when torque is quickly established.

For bit 10:

Synchronous reluctance motor (RESM):

For load-dependent optimum flux characteristic (p1401.3 = 1) the flux setpoint is increased at low speeds.

Flux boost at low speeds is not effective when using an encoder - or for encoderless operation with HF signal injection (p1750.5).

For bit 13:

PESM: activation of the load-dependent precontrol characteristic

For bit 14:

When the function is activated, the following applies:

- the optimum flux is calculated and the power loss is entered for optimization purposes

- the efficiency optimization (p1580) is not active.

It only makes sense to activate this function if the dynamic response requirements of the speed controller are low.

In order to avoid oscillations, if required, the speed controller parameters should be adapted (increase Tn, reduce Kp). Further, the smoothing time of the flux setpoint filter (p1582) should be increased.

p1402[0...n] Closed-loop current control and motor model configuration / I_ctrl config

VECTOR_G (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_REG | **Access level:** 3
Data type: Unsigned16 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: Closed-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: REL | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0000 0000 0000 0001 bin

Description: Sets the configuration for the closed-loop control and the motor model.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Speed-following error correction active	Yes	No	-
02	Current controller adaptation active	Yes	No	-
07	Taking into account slip for speed and frequency calculation	Yes	No	-
08	Changeover current model/voltage model with speed setpoint	Yes	No	-
10	d-current controller adaptation model-based	Yes	No	-
11	Ldiq/dt precontrol model at the voltage limit	Yes	No	-
12	q-current controller adaptation model-based	Yes	No	-
13	Current controller decoupling filter	Yes	No	-
15	Current controller precontrol active for Vdc controller oper.	Yes	No	-

Note:

For bit 00:

When the bit is set, the speed following error is compensated that is obtained as a result of the smoothing time constant in p1441.

For bit 02:

The current controller adaptation (p0391 ... p0393) is only calculated when the bit is set.

For bit 07:

Only with encoderless control of separately excited synchronous motors.

For bit 08:

Only with encoderless control of separately excited synchronous motors.

For bit 11:

Model for the dynamic voltage precontrol Ldi/dt of the q current controller when reaching the voltage limit with the I component held (see p0500 = 4).

For bit 13 (only permanent-magnet synchronous motor):

Operation in the field weakening range is stabilized when the bit is set.

For bit 15:

For DC link voltage control (see function diagram 7960) the dynamic current controller precontrol is activated (scalable using p1702, p1703).

r1406.4...15 CO/BO: Control word speed controller / STW n_ctrl

VECTOR_G (n/M)

	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0	3.0	0.0

Description: Sets the dead time to symmetrize the speed setpoint for active torque precontrol.

The selected multiplier refers to the sampling time of the speed controller (dead time= p1428 * p0115[1]).

Dependency: In conjunction with p1429, this parameter can emulate the characteristics of how the torque is established (dynamic response of closed current control loop).

The parameter is only effective if the acceleration model is supplied using external acceleration signals (p1400.2 = 1). For p1400.2 = 0, a fixed dead time is used.

See also: p1429, p1511

p1429[0...n] Speed precontrol symmetrizing time constant / n_prectrl sym Tc

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3

Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000	5.000	1.000

Description: Sets the damping of a PT2 element for the reference model of the speed controller.

Recommendation: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.

Dependency: In conjunction with p1433 and p1435, the characteristics (in time) of the P-controlled speed control loop can be emulated.
For VECTOR (r0107) the following applies:
The reference model is activated with p1400.3 = 1.
See also: p1433, p1435

p1435[0...n] Speed controller reference model dead time / n_ctrRefMod t_dead

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 5030, 6031
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00	3.00	0.00

Description: Sets the "fractional" dead time for the reference model of the speed controller.
This parameter emulates the computing dead time of the proportionally controlled speed control loop.
The selected multiplier refers to the speed controller sampling time (dead time= p1435 * p0115[1]).

Recommendation: The reference model is correctly set when the characteristics of p1439 (reference model output) and p1445 (actual speed value) are virtually identical when the I component of the speed controller is disabled.

Dependency: In conjunction with p1433 and p1434, the characteristics (in time) of the P-controlled speed control loop can be emulated.
For VECTOR (r0107) the following applies:
The reference model is activated with p1400.3 = 1.
See also: p0115, p1433, p1434

r1436 CO: Speed controller reference model speed setpoint output / RefMod n_set outp

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5030, 6031
P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the speed setpoint at the output of the reference model.

Dependency: For VECTOR (r0107) the following applies:
The reference model is activated with p1400.3 = 1.

p1437[0...n] CI: Speed controller reference model I component input / n_ctrRefMod I_comp

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6031
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1436[0]

Description: Sets the signal source for speed setpoint for the integral component of the speed controller.

Dependency: The reference model is activated with p1400.3 = 1.
See also: p1400

Notice: In should be ensured that a speed setpoint is selected as signal source that corresponds to the setpoint for the P component of the speed controller.

r1438 CO: Speed controller speed setpoint / n_ctrl n_set

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 3001, 5019, 5030, 5042, 5210, 6020, 6031
	P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output of the speed setpoint after setpoint limiting for the P component of the speed controller.
For U/f operation, the value that is displayed is of no relevance.

Dependency: See also: r1439

Note: In the standard state (the reference model is deactivated), r1438 = r1439.

r1439 Speed setpoint I component / n_set I_comp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5030, 5040, 6031
	P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the speed setpoint for the I component of the speed controller (output of the reference model after the setpoint limiting).

Dependency: See also: r1438

Note: In the standard state (the reference model is deactivated), r1438 = r1439.

p1440[0...n] CI: Speed controller speed actual value input / n_ctrl n_act

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6040
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	63[0]

Description: Sets the signal source for the speed actual value of the speed controller.

Dependency: See also: r1443

Danger: When using external speed actual values for the speed controller, for a direction of rotation change via p1821 = 1, then its polarity must also be changed (e.g. for an encoder DO via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.

Caution: Speed control with encoder (p1300 = 21):

For the speed or position signal of the motor model there must always be a motor encoder available (evaluation via SMC/SMI, see p0400). The actual speed of the motor (r0061) and the position data for synchronous motors continue to come from this motor encoder and are not affected by the setting of p1440.

Interconnection of p1440:

If connector input p1440 is interconnected with an external speed actual value, the identical scaling of the speed should be observed (p2000).

Notice: Speed control without encoder (p1300 = 20):

Dependent upon the transmission path of the external speed signal there will be dead times which have to be taken into account when setting the speed controller parameters (p1470, p1472) and can lead to dynamic losses accordingly. It is for this reason that signal transmission times have to be kept as low as possible.

So that the speed controller can also work at standstill, set p1750.2 = 1 (closed-loop operation from zero speed for passive loads). If you do not make this setting, operation will switch to open-loop speed control in the low speed range, switching the closed-loop speed controller off and rendering the measured actual speed ineffective.

Note: Speed control with encoder (p1300 = 21):

An external speed signal should, on the average, correspond to the speed of the motor encoder (r0061).

p1441[0...n] Actual speed smoothing time / n_act t_smth

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 4710, 4715
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [ms]	1000.00 [ms]	0.00 [ms]

Description: Sets the smoothing time constant (PT1) for the speed actual value.

Dependency: See also: r0063

Notice: Smoothing times above 20 ms are only possible if the drive is accelerated or braked with the appropriately long ramp-up/ramp-down times. Otherwise, significant torque errors can occur and there is the danger that the drive is switched off (tripped) with F07902 (motor stalled).

Note: The speed actual value should be smoothed for encoders with a low pulse number or for resolvers.

After this parameter has been changed, we recommend that the speed controller is adapted and/or the speed controller settings checked Kp (p1460) and Tn (p1462).

p1442[0...n] Speed controller speed actual value smoothing time / n_ctr n_act t_smth

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6020, 6040
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [ms]	32000.00 [ms]	4.00 [ms]

Description: Sets the smoothing time for the actual speed value of the speed controller for closed-loop control with encoder.

Note: The smoothing must be increased if there is gear backlash. For longer smoothing times, the integral time of the speed controller must also be increased (e.g. using p0340 = 4).

r1443 CO: Speed controller speed actual value at actual value input / n_ctrl n_act inp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6040
	P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the speed actual value at the speed controller's free-wiring actual value input p1440.

Dependency: See also: p1440

Note: This speed signal is only used by the speed controller and not by the motor model.

r1444 Speed controller speed setpoint steady-state (static) / n_ctrl n_set stat

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5030
	P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the sum of all speed setpoints that are present.

The following sources are available for the displayed setpoint:

- setpoint at the ramp-function generator input (r1119).
- speed setpoint 1 (p1155).
- speed setpoint 2 (p1160).
- speed setpoint for the speed precontrol (p1430).
- setpoint from DSC (for DSC active).
- setpoint via PC (for master control active).

Dependency: See also: r1119, p1155, p1160, p1430

r1445 CO: Actual speed smoothed / n_act smth

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6040
P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the actual smoothed speed actual value of the speed control.

p1451[0...n] Motor model speed actual value smoothing time sensorless / MotMod n_act t_sm

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3

P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	1000 [ms]	4 [ms]

Description: Sets the smoothing time for the speed actual value calculated by the motor model in sensorless operation.

p1452[0...n] Speed controller speed actual value smoothing time (sensorless) / n_C n_ActV t_s sl

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6020, 6040
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [ms]	32000.00 [ms]	10.00 [ms]

Description: Sets the smoothing time for the actual speed of the speed controller for encoderless closed-loop speed control.

Note: The smoothing must be increased if there is gear backlash. For longer smoothing times, the integral time of the speed controller must also be increased (e.g. using p0340 = 4).

r1454 CO: Speed controller system deviation I component / n_ctrl SysDev Tn

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6040
P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [rpm]	- [rpm]	- [rpm]

Description: Display and connector output for the system deviation of the I component of the speed controller.

When the reference model is inactive (p1433 = 0 Hz), this parameter corresponds to the system deviation of the complete PI controller (r1454 = r0064).

p1455[0...n] CI: Speed controller P gain adaptation signal / n_ctrl adpt_sig Kp

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6050
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the source for the adaptation signal to additionally adapt the P gain of the speed controller.

Dependency: See also: p1456, p1457, p1458, p1459

p1456[0...n] Speed controller P gain adaptation lower starting point / n_ctrl adpt Kp low

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6050
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [%]	400.00 [%]	0.00 [%]

Description: Sets the lower starting point of the adaptation range for the additional adaptation of the P gain of the speed controller.
The values are in % and refer to the set source of the adaptation signal.

Dependency: See also: p1455, p1457, p1458, p1459

Note: If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.

p1457[0...n] Speed controller P gain adaptation upper starting point / n_ctrl adpt Kp up

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6050

	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [%]	400.00 [%]	0.00 [%]

Description: Sets the upper starting point of the adaptation range for the additional adaptation of the P gain of the speed controller.
The values are in % and refer to the set source of the adaptation signal.

Dependency: See also: p1455, p1456, p1458, p1459

Note: If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.

p1458[0...n] Adaptation factor lower / Adapt_factor lower

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6050
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the adaptation factor before the adaptation range (0 % ... p1456) to additionally adapt the P gain of the speed/velocity controller.

Dependency: See also: p1455, p1456, p1457, p1459

Note: If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.

p1459[0...n] Adaptation factor upper / Adapt_factor upper

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6050
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the adaptation factor after the adaptation range (> p1457) to additionally adapt the P gain of the speed/velocity controller.

Dependency: See also: p1455, p1456, p1457, p1458

Note: If the upper transition point p1457 of the speed controller adaptation is set to lower values than the lower transition p1456, then the controller gain below p1457 is adapted with p1459 and above p1456, with p1458.

p1460[0...n] Speed controller P gain adaptation speed lower / n_ctrl Kp n lower

VECTOR_G (J_estimator / OBT, n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6020, 6040
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0000	999999.0000	0.3000

Description: Sets the P gain of the speed controller before the adaptation speed range (0 ... p1464).
This value corresponds to the basic setting of the P gain of the speed controller without adaptation (p1461 = 100 %).

Dependency: For p0528 = 1, the speed controller gain is represented without any dimensions.
See also: p1461, p1464, p1465

p1461[0...n] Speed controller Kp adaptation speed upper scaling / n_ctr Kp n up scal

VECTOR_G (J_estimator / OBT, n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6050
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the P gain of the speed controller for the upper adaptation speed range (> p1465).
The entry is made referred to the P gain for the lower adaptation speed range of the speed controller (% referred to p1460).

Dependency: See also: p1460, p1464, p1465

Note: If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition p1464, then the controller gain below p1465 is adapted with p1461. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1462[0...n] Speed controller integral time adaptation speed lower / n_ctrl Tn n lower

VECTOR_G (J_estimator / OBT, n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 5040, 5042, 6020, 6040
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [ms]	100000.00 [ms]	20.00 [ms]

Description: Sets the integration time of the speed controller before the adaptation speed range (0 ... p1464).
This value corresponds to the basic setting of the integral time of the speed controller without adaptation (p1461 = 100 %).

Dependency: See also: p1463, p1464, p1465

Note: The integral component is stopped if the complete controller output or the sum of controller output and torque precontrol reach the torque limit.

p1463[0...n] Speed controller Tn adaptation speed upper scaling / n_ctr Tn n up scal

VECTOR_G (J_estimator / OBT, n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6050
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [%]	200000.0 [%]	100.0 [%]

Description: Sets the integral time of the speed controller after the adaptation speed range (> p1465).
The entry is made referred to the integral time for the lower adaptation speed range of the speed controller (% referred to p1462).

Dependency: See also: p1462, p1464, p1465

Note: If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller integral time below p1465 is adapted with p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1464[0...n] Speed controller adaptation speed lower / n_ctrl n lower

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6050
	P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the lower adaptation speed of the speed controller.
No adaptation is effective below this speed.

Dependency: The parameter is set by the speed controller optimization. Adaptation to the application should then be subsequently made.
See also: p1460, p1461, p1462, p1463, p1465

Note: If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller below p1465 is adapted with p1461 or p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1465[0...n] Speed controller adaptation speed upper / n_ctrl n upper

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6050
	P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]

Description: Sets the upper adaptation speed of the speed controller.
No adaptation is effective above this speed.
For the proportional gain, p1460 x p1461 is effective.
For the integral time, p1462 x p1463 is effective.

Dependency: The parameter is set by the speed controller optimization. Adaptation to the application should then be subsequently made.
See also: p1460, p1461, p1462, p1463, p1464

Note: If the upper transition point p1465 of the speed controller adaptation is set to lower values than the lower transition point p1464, then the controller below p1465 is adapted with p1461 or p1463. This means that an adaptation can be implemented for low speeds without having to change the controller parameters.

p1466[0...n] CI: Speed controller P gain scaling / n_ctrl Kp scal

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6050
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for the scaling of the P gain of the speed controller.
This also makes the effective P gain (including adaptations) scalable.

r1468 CO: Speed controller P gain effective / n_ctrl Kp eff

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6040
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the effective P gain of the speed controller.

Dependency: For p0528 = 1, the speed controller gain is represented without any dimensions. In this case, connector output signal r1468 is increased by a factor of 100 in order to improve the resolution.

r1469 Speed controller integral time effective / n_ctrl Tn eff

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5040, 5042, 6040
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ms]	- [ms]	- [ms]

Description: Displays the effective integral time of the speed controller.

p1470[0...n] Speed controller encoderless operation P gain / n_ctrl SL Kp

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6040, 6050
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00000	999999.00000	0.30000

Description: Sets the P gain for encoderless operation for the speed controller.

Dependency: For p0528 = 1, the speed controller gain is represented without any dimensions.

Note: The product p0341 x p0342 is taken into account when automatically calculating the speed controller (p0340 = 1, 3, 4).

p1472[0...n] Speed controller encoderless operation integral time / n_ctrl SL Tn

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6040, 6050
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [ms]	100000.0 [ms]	20.0 [ms]

Description: Set the integral time for encoderless operation for the speed controller.

Note: The integral component is stopped if the complete controller output or the sum of controller output and torque precontrol reach the torque limit.

p1475[0...n] CI: Speed controller torque setting value for motor holding brake / n_ctrl M_sv MHB

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6040
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the torque setting value when starting up with motor holding brake.

Recommendation: The offset for the torque limiting p1532 can be used as torque setting value.
Sensorless vector control:
To hold the actual torque when stopping the motor, you are advised to set p1400.1 = 1. As a result, the integral component of the speed controller is frozen when changing to the open-loop controlled operating range.

Dependency: The switching in of the torque setting value for the motor holding brake has a higher priority than the setting of the integrator value using p1477 and p1478.

Note: The setting of the integral output of the speed controller begins after magnetizing (see p0346, r0056.4) and ends at the end of the brake control opening time p1216.
A setting value of zero means that no setting procedure will take place.

p1476[0...n] BI: Speed controller hold integrator / n_ctrl integ stop

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2520, 5040, 5042, 5210, 6040
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to hold the integrator for the speed controller.

p1477[0...n] BI: Speed controller set integrator value / n_ctrl integ set

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2520, 5040, 5042, 5210, 6040
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to set the integrator setting value (p1478).

Dependency: See also: p1478, p1479

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: For the interface mode "SIMODRIVE 611 universal" (p2038 = 1), p1477 and p1478 are used for the signal STW2.6 (integrator inhibit, speed controller).

p1478[0...n] CI: Speed controller integrator setting value / n_ctr integ_setVal

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6040
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the integrator setting value for the velocity controller.
The signal to set this integrator setting value is interconnected via p1477.

Dependency: The setting value of the speed controller integrator is weighted with the scaling factor of the signal source in p1479.
If p1478 is interconnected to the integral output of the speed controller (r1482), then after the magnetizing time (r0346) and if the speed controller is enabled, the integral component of the controller is set to the last value before the pulse inhibit. This value is set if no setting command (p1477) is interconnected or, at the instant that the pulses were inhibited, a setting command is available, which is not deactivated up to the next time that the pulses are inhibited. For sensorless vector control, in addition p1400.1 should be set to 1 so that when the drive is stopped, the integral component of the speed controller is not controlled down to zero.
In order that when setting the integrator output, only the static torque is detected, we recommend that the accelerating torque is completely precontrolled (e.g. p1496).
If p1478 is interconnected to another output other than r1482, then after magnetizing and speed controller enable, the integral output is set once if the setting command is not interconnected (p1477 = 0).
See also: p1477, p1479

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1479[0...n] CI: Speed controller integrator setting value scaling / n_ctrl I_val scal

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6040
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for scaling the integrator setting value (p1478) of the speed controller.
Dependency: See also: p1477, p1478

r1480 CO: Speed controller PI torque output / n_ctrl PI-M_outp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5019, 5040, 5042, 5060, 5210, 6060
	P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the torque setpoint at the output of the PI speed controller.

r1481 CO: Speed controller P torque output / n_ctrl P-M_outp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5040, 5042, 5210, 6040
	P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the torque setpoint at the output of the P speed controller.

r1482 CO: Speed controller I torque output / n_ctrl I-M_outp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5040, 5042, 5210, 6030, 6040
	P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the torque setpoint at the output of the I speed controller.

p1486[0...n] CI: Droop compensation torque / Droop M_comp

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6030
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the compensation torque to be output within the droop calculation.
This parameter should be interconnected with the torque setpoint of the drive (corresponding to the selection p1488), with which load equalization should be performed.

p1487[0...n] Droop compensation torque scaling / Droop M_comp scal

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6030
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-2000.0 [%]	2000.0 [%]	100.0 [%]

Description: Sets the scaling for the compensation torque within the droop calculation.

p1488[0...n] Droop input source / Droop input source

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 6030
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	3	0

Description: Sets the source for droop feedback.

With increasing torque, the speed setpoint is reduced (enabled using p1492), so that for mechanically coupled drives a load equalization (load compensation) is obtained.

A load difference compensation is also possible, if p1486 is interconnected with the torque setpoint of the other drive.

Value:
0: Droop feedback not connected
1: Droop from torque setpoint
2: Droop from speed controller output
3: Droop from integral output speed controller

Dependency: See also: p1486, p1487, p1489, r1490, p1492

Caution: For active acceleration precontrol of the speed controller (refer to p1496), it is not recommended that p1488 is set to 1, as this could result in positive coupling effects. Instead of this, as source of the droop feedback, the output signal of the speed controller should be used, which generally sets the load torque.

p1489[0...n] Droop feedback scaling / Droop scal

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6030
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000	0.500	0.050

Description: Sets the scaling for the droop feedback

Dependency: See also: p1486, p1487, p1488, r1490, p1492

Note: Example:

A value of 0.05 means that for a torque equal to the rated motor torque, the rated motor speed is reduced by 5 %.

r1490 CO: Droop feedback speed reduction / Droop n_reduction

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6030
	P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [rpm]	- [rpm]	- [rpm]

Description: Displays the output signal of the droop calculation. The droop feedback result is subtracted from the speed setpoint when activated (p1492).

Dependency: See also: p1486, p1487, p1488, p1489, p1492

p1492[0...n] BI: Droop feedback enable / Droop enable

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2520, 6030
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Enables the droop to be applied to the speed/velocity setpoint.

Dependency: See also: p1486, p1487, p1488, p1489, r1490

Note: Even when not enabled, the droop speed is calculated but not subtracted from the setpoint speed. This makes it possible to subtract the result of this calculation from the speed of another drive.

r1493 CO: Moment of inertia total, scaled / M_inert tot scal

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6031
	P group: Closed-loop control	**Unit group:** 25_1	**Unit selection:** p0100
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [kgm²]	- [kgm²]	- [kgm²]

Description: Display and connector output for the parameterized total moment of inertia.
The value is calculated as follows: (p0341 * p0342) + p1496
The scaling is not take into account using p1497.

p1495[0...n] CI: Acceleration precontrol / a_prectrl

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6031
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2007	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the acceleration precontrol.

Dependency: The signal source for the acceleration is activated with p1400.2 = 1.
For p1400.2 = 0, the acceleration precontrol is calculated from the speed setpoint change from r0062.
For p1400.2 = 0 and activate reference model (p1400.3 = 1) the acceleration precontrol is switched out.
See also: p1400, p1496

Note: If the acceleration is entered as external signal, then the accelerating torque is calculated as follows (r1518):
r1518 = acceleration (% of p2007) / 100 % * (p2007 * 60 s) / p0311 * r0345 / 1 s * r0333
or
p1518 = acceleration (1/s*s) * 2 * Pi * r1493

p1496[0...n] Acceleration precontrol scaling / a_prectrl scal

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6020, 6031
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	10000.0 [%]	0.0 [%]

Description: Sets the scaling for the acceleration precontrol of the speed/velocity controller.

Dependency: When the reference model is activated (p1400.3 = 1) and for an internal acceleration precontrol (p1400.2 = 0), the acceleration precontrol is switched out (disabled). The reference model (p1400.3 = 1) and external acceleration precontrol (p1400.2 = 1) can be operated together.
See also: p0341, p0342

Warning: The acceleration precontrol r1518 is kept at the old value if the ramp-function generator tracking (r1199.5) is active or the ramp-function generator output is set (r1199.3). This is used to avoid torque peaks. Depending on the application, it may therefore be necessary to disable the ramp-function generator tracking (p1145 = 0) or the acceleration precontrol (p1496 = 0).

The acceleration precontrol is set to zero, if the Vdc control is active (r0056.14/15).

Note: The parameter is set to 100% by the rotating measurement (refer to p1960).

The acceleration precontrol may not be used if the speed setpoint manifests significant ripple (e.g. analog setpoint) and the rounding-off in the speed ramp-function generator is disabled.

We also recommend that the precontrol mode is not used if there is gearbox backlash.

p1497[0...n] CI: Moment of inertia scaling signal source / M_inert scal s_s

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 5042, 5210, 6030, 6031
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for scaling the motor moment of inertia.

p1498[0...n] Load moment of inertia / Load m_inert

VECTOR_G (J_estimator / OBT, n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6031
P group: Closed-loop control	**Unit group:** 25_1	**Unit selection:** p0100
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00000 [kgm²]	100000.00000 [kgm²]	0.00000 [kgm²]

Description: Sets the load moment of inertia.

Note: (p0341 * p0342) + p1498 influence the speed/torque precontrol (active in encoderless operation or for p1402.4 = 1).

p1499[0...n] Accelerating for torque control scaling / a for M_ctrl scal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6030
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [%]	400.0 [%]	100.0 [%]

Description: Sets the scaling for the acceleration integrator at low speeds (only for encoderless torque control).

Dependency: See also: p0341, p0342

p1500[0...n] Macro Connector Inputs (CI) for torque setpoints / Macro CI M_set

VECTOR_G

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** CDS, p0170	**Function diagram:** -
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	999999	0

Description: Runs the corresponding macro files.

The Connector Inputs (CI) for the torque setpoints of the appropriate Command Data Set (CDS) are appropriately interconnected.

The selected macro file must be available on the memory card/device memory.

Example:

p1500 = 6 --> the macro file PM000006.ACX is run.

Dependency: See also: p0015, p0700, p1000, r8573

Notice: No errors were issued during quick commissioning (p3900 = 1) when writing to parameters of the QUICK_IBN group!
When executing a specific macro, the corresponding programmed settings are made and become active.

Note: The macros in the specified directory are displayed in r8573. r8573 is not in the expert list of the commissioning tool.
Macros available as standard are described in the technical documentation of the particular product.
CI: Connector Input

p1501[0...n] BI: Change over between closed-loop speed/torque control / Chgov n/M_ctrl

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2520, 6020
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for toggling between speed and torque control.
0 signal: Closed-loop speed control
1 signal: Closed-loop torque control

Dependency: The input connectors to enter the torque are provided using p1511, p1512 and p1513.
See also: p1300

Notice: If the closed-loop torque control is not activated (p1300) and a change is made to closed-loop torque control (p1501), OFF1 (p0840) does not have its own braking response but pulse suppression when standstill is detected (p1226, p1227).

Note: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1502[0...n] BI: Freeze moment of inertia estimator / J_estimator freeze

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source to freeze the estimated moment of inertia.
0 signal:
Moment of inertia estimator active
1 signal:
Determined moment of inertia frozen.

Dependency: See also: p1300

Note: Only active when the "moment of inertia estimator" function module is active (r0108.10 = 1) and p1400.18 =1.
For operation with encoder, p1400.23 must also be set to 1.

p1503[0...n] CI: Torque setpoint / M_set

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6020, 6060
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for the torque setpoint for torque control.

Note: A change is made to closed-loop torque control if, in p1300, closed-loop torque control was selected or if the selection was made using the changeover source in p1501.
it is also possible to change over in operation using p1501.

r1508 CO: Torque setpoint before supplementary torque / M_set bef M_suppl

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6030, 6060, 6722
	P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Nm]	- [Nm]	- [Nm]

Description: Displays the torque setpoint before entering the supplementary torque.
For closed-loop speed control, r1508 corresponds to the speed controller output; for closed-loop torque control, r1508 corresponds to the torque setpoint of the signal source assigned in p1503.

p1511[0...n] CI: Supplementary torque 1 / M_suppl 1

	Min:	**Max:**	**Factory setting:**
	-2000.0 [%]	2000.0 [%]	100.0 [%]

Description: Sets the scaling for supplementary torque 2.

r1515 Supplementary torque total / M_suppl total

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6020, 6060
P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Nm]	- [Nm]	- [Nm]

Description: Displays the total supplementary torque.
The displayed value is the total of supplementary torque values 1 and 2 (p1511, p1512, p1513, p1514).

r1516 CO: Supplementary torque and acceleration torque / M_suppl + M_a

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6060
P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Nm]	- [Nm]	- [Nm]

Description: Displays the total supplementary torque and the accelerating torque.
The displayed value is the total of the smoothed supplementary torque and the accelerating torque (p1516 = p1518[1] + r1515).

p1517[0...n] Accelerating torque smoothing time constant / M_a Tc_smth

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 5042, 5210, 6060
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [ms]	100.00 [ms]	4.00 [ms]

Description: Sets the smoothing time constant of the accelerating torque.

Note: For servo drives, the following applies:
- For p1402.4 = 1, the highest dynamic performance is achieved with p1517 = 0 ms.
- in encoderless operation, p1517 should be set >= 0.5 ms; for an induction motor with current displacement rotor p1517 >= 20 ms is recommended.

For vector drives, the following applies:
- the acceleration precontrol is inhibited if the smoothing is set to the maximum value.

r1518[0...1] CO: Accelerating torque / M_accel

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6060
P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Nm]	- [Nm]	- [Nm]

Description: Displays the accelerating torque for precontrol of the speed controller.

Index: [0] = Unsmoothed
[1] = Smoothed

Dependency: See also: p0341, p0342, p1496

p1520[0...n] CO: Torque limit upper / M_max upper

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6020, 6630
	P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-1000000.00 [Nm]	20000000.00 [Nm]	0.00 [Nm]

Description: Sets the fixed, upper torque limit.

Dependency: See also: p1521, p1522, p1523, r1538, r1539

Danger: Negative values when setting the upper torque limit (p1520 < 0) can result in the motor accelerating in an uncontrollable fashion.

Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.

Note: The torque limit is limited to 400% of the rated motor torque. When automatically calculating the motor/closed-loop control parameters (p0340), the torque limit is set to match the current limit (p0640).

p1521[0...n] CO: Torque limit lower / M_max lower

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6020, 6630
	P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-20000000.00 [Nm]	1000000.00 [Nm]	0.00 [Nm]

Description: Sets the fixed, lower torque limit.

Dependency: See also: p1520, p1522, p1523, p1532

Danger: Positive values when setting the lower torque limit (p1521 > 0) can result in the motor accelerating in an uncontrollable fashion.

Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.

Note: The torque limit is limited to 400% of the rated motor torque. When automatically calculating the motor/closed-loop control parameters (p0340), the torque limit is set to match the current limit (p0640).

p1522[0...n] CI: Torque limit upper / M_max upper

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6630

	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the upper torque limit of all torque limits.
Dependency: See also: p1520, p1521, p1522, p1523, p1528, p1529

r1527 CO: Total lower torque limit / M_max lower total

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6060, 6630, 6640
	P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the lower torque limit of all torque limits.

Dependency: See also: p1520, p1521, p1522, p1523, p1528, p1529

p1528[0...n] CI: Torque limit upper scaling / M_max upper scal

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6630
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1524[0]

Description: Sets the signal source for the scaling of the upper torque limit in p1522.

Danger: For p1400.4 = 0 (torque limiting, upper/lower) the following applies:

Negative values resulting from the signal source and scaling can cause the motor to accelerate in an uncontrolled manner.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1529[0...n] CI: Torque limit lower scaling / M_max lower scal

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6630
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1525[0]

Description: Sets the signal source for the scaling of the lower torque limit in p1523.

Danger: For p1400.4 = 0 (torque limiting, upper/lower) the following applies:

Positive values resulting from the signal source and scaling can cause the motor to accelerate in an uncontrolled manner.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p1530[0...n] Power limit motoring / P_max mot

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6640
	P group: Closed-loop control	**Unit group:** 14_5	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [kW]	100000.00 [kW]	0.00 [kW]

Description: Sets the power limit when motoring.

Dependency: See also: p0500, p1531

Note: The power limit is limited to 300% of the rated motor power.

p1531[0...n] Power limit regenerative / P_max reg

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6640
	P group: Closed-loop control	**Unit group:** 14_5	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-100000.00 [kW]	-0.01 [kW]	-0.01 [kW]

Description: Sets the regenerative power limit.

Dependency: See also: p0500, p1530

Note: The power limit is limited to 300% of the rated motor power.

For power units without regenerative feedback into the line supply, the regenerative power limit is pre-set to 30% of the motoring power limit p1530 and in the ratio rated drive converter power to rated motor power. If a braking resistor is connected to the DC link, then the power limit can be correspondingly increased.

p1532[0...n] CO: Torque limit offset / M_max offset

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 5620, 5630, 5650, 7010, 8012
	P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-100000.00 [Nm]	100000.00 [Nm]	0.00 [Nm]

Description: Sets the torque offset for the torque limit.

The setting allows electronic weight equalization to be used for vertical axes.

Recommendation: The torque offset can also be used for torque precontrol or as integrator setting value for the speed controller.

Dependency: See also: p1520, p1521, p1522, p1523, p1528, p1529

Danger: If the offset is set higher/lower than the lower/upper torque limit, then the unloaded drive can accelerate up to the maximum speed.

Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.

r1533 Current limit torque-generating total / Iq_max total

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3

The signal limited by the Vdc controller is displayed here.
Index: [0] = Limited
[1] = Unlimited

r1538 CO: Upper effective torque limit / M_max upper eff

VECTOR_G (n/M)

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 6020, 6640
P group: Closed-loop control
Unit group: 7_1
Unit selection: p0505
Not for motor type: REL
Scaling: p2003
Expert list: 1
Min:
Max:
Factory setting:
- [Nm]
- [Nm]
- [Nm]

Description: Display and connector output for the actual effective upper torque limit.

Note: The effective upper torque limit is reduced with respect to the selected upper torque limit p1520, if the current limit p0640 is reduced or the rated magnetizing current of the induction motor p0320 is increased.
The torque limit p1520 can be re-calculated using p0340 = 1, 3 or 5.
This torque limit can be influenced by p0543.
The following applies for VECTOR:
- this is possibly the case for a rotating measurement (see p1960).
- additional variable torque limiting is possible (e.g. binector input p1540).

r1539 CO: Lower effective torque limit / M_max lower eff

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6020, 6640
P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Nm]	- [Nm]	- [Nm]

Description: Display and connector output for the actual effective lower torque limit.

Note: The effective lower torque limit is reduced with respect to the selected lower torque limit p1521, if the current limit p0640 is reduced or the rated magnetizing current of the induction motor p0320 is increased.
The following applies for VECTOR:
- this is possibly the case for a rotating measurement (see p1960).
- additional variable torque limiting is possible (e.g. binector input p1541).
The torque limit p1520 can be re-calculated using p0340 = 1, 3 or 5.
This torque limit can be influenced by p0543.

p1540[0...n] CI: Torque limit speed controller upper scaling / M_max n-ctr upScal

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6020, 6060
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**

Description: Displays the limit for the torque-generating current component using the stall calculation, the current limit of the Motor Module as well as the parameterization in p0640.
Index: [0] = Upper limit
[1] = Lower limit

p1551[0...n] BI: Torque limit variable/fixed signal source / M_lim var/fix s_s

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 5620, 5630, 6060, 6630
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source to change over the torque limits between variable and fixed torque limit.
BI: p1551 = 1 signal:
The variable torque limit applies (fixed torque limit + scaling).
BI: p1551 = 0 signal:
The fixed torque limit applies.
Example:
In order that for a Quick Stop (OFF3) the fixed torque limit is effective, binector input: p1551 must be interconnected to r0899.5.

p1552[0...n] CI: Torque limit upper scaling without offset / M_max up w/o offs

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6060
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for the scaling of the upper torque limiting to limit the speed controller output without taking into account the current and power limits.

p1553[0...n] Stall limit scaling / Stall limit scal

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	80.0 [%]	130.0 [%]	100.0 [%]

Description: Sets the scaling of the stall limit for the start of field weakening.

Danger: If the stall current limit is increased, then the q current setpoint can exceed the stall limit; as a consequence, a hysteresis effect can occur when loading and unloading.

p1554[0...n] CI: Torque limit lower scaling without offset / M_max low w/o offs

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6060
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for the scaling of the lower torque limiting to limit the speed controller output without taking into account the current and power limits.

p1555[0...n] CI: Power limit / P_max

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6640
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** r2004	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for the motoring and negative regenerative power limit.

Dependency: See also: p1530, p1531

Note: The resulting motoring power limit is the minimum from p1530 and the signal which is read in.
The resulting regenerative power limit is the maximum from p1531 and the negative signal which is read in.

p1556[0...n] Power limit scaling / P_max scal

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6640
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00	340.28235E36	0.00

Description: Sets the scaling of the signal source for the motoring and negative regenerative power limit.
A value of 0 means no power limiting.

p1560[0...n] Moment of inertia estimator accelerating torque threshold value / J_est M thr

VECTOR_G (J_estimator / OBT)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.10 [%]	100.00 [%]	10.00 [%]

Description: Sets the threshold for the accelerating torque for the moment of inertia estimator.
The moment of inertia estimator is active above this threshold.
The value is referred to the rated motor torque (r0333).

Dependency: See also: p1400, p1561, p1562

Note: The moment of inertia estimation is inaccurate at very low accelerating torques. As a consequence, below this threshold, the estimator does not provide any new values.

p1561[0...n] Moment of inertia estimator change time moment of inertia / J_est t_chg J

VECTOR_G (J_estimator / OBT)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
10.00 [ms]	5000.00 [ms]	500.00 [ms]

Description: Sets the change time for the moment of inertia for the moment of inertia estimator.
Lower values mean that faster changes are possible.
For a higher value, this estimated value is smoothed more significantly.

Dependency: See also: p1400, p1560, p1562

p1562[0...n] Moment of inertia estimator change time load / J_est t load

VECTOR_G (J_estimator / OBT)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
5.00 [ms]	5000.00 [ms]	10.00 [ms]

Description: Sets the change time for the load torque for the moment of inertia estimator.
Lower values mean that faster changes are possible.
For a higher value, this estimated value is smoothed more significantly.

Dependency: See also: p1400, p1560, p1561

p1563[0...n] CO: Mom. of inertia estimator load torque direction of rotation pos. / J_est M pos

VECTOR_G (J_estimator / OBT)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-340.28235E36 [Nm]	340.28235E36 [Nm]	0.00 [Nm]

Description: Display and connector output for the monitored load torque in the positive direction of rotation.
The moment of inertia estimator estimates the load torque drawn while the speed is constant.

Dependency: See also: p1400, p1560, p1561

p1564[0...n] CO: Mom. of inertia estimator load torque direction of rotation neg. / J_est M neg

VECTOR_G (J_estimator / OBT)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-340.28235E36 [Nm]	340.28235E36 [Nm]	0.00 [Nm]

Description: Display and connector output for the monitored load torque in the negative direction of rotation.
The moment of inertia estimator estimates the load torque drawn while the speed is constant.

Dependency: See also: p1400, p1560, p1561

p1565 Moment of inertia estimator reset moment of inertia / J_est reset J

VECTOR_G (J_estimator / OBT)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-1	1	0

Description: Setting to reset the moment of inertia estimator for the currently selected drive data set (DDS).

Value:
-1: Reset moment of inertia and load
0: Inactive
1: Reset moment of inertia

Dependency: See also: p1400, p1560, p1561, p1562, p1563, p1564

Note: The parameter is automatically reset to 0 after the reset.

r1566[0...n] Flux reduction torque factor transition value / Flux red M trans

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6790
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: The following applies for a synchronous reluctance motor:
Displays the transition value for the start of the evaluation of the optimum flux characteristic.
The value is referred to the rated motor torque.

Note: The transition value corresponds with the lower limit of the flux setpoint (p1581).
For a lower absolute torque setpoint, the flux setpoint remains at the lower limit (p1581).

p1567[0...n] Magnetization rate time scaling / Mag Tv scale

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6790
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [%]	1000 [%]	100 [%]

Description: The following applies for a synchronous reluctance motor:
Sets the scaling of the rate time Tv for dynamic flux increase when the torque is quickly established.
The value is referred to the inverse value of the rated motor frequency.
Tv = p1567 / 100 % / p0310

Dependency: See also: p1401

Note: The "Dynamic load-dependent flux boost" function can be deactivated using p1401.9 = 0.

r1568[0...5] CO: Synchronous reluctance motor flux channel / RESM flux channel

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [%]	- [%]	- [%]

Description: Display and connector output for signals of the flux channel for a synchronous reluctance motor (RESM).
The values are referred to the rated motor flux of the direct axis (p0357 * r0331).

Index: [0] = Setpoint before filter
[1] = Optimum flux characteristic output
[2] = Minimum value at low speed
[3] = Dynamic load-dependent boost
[4] = Field weakening value total
[5] = Field weakening value precontrol

Note: RESM: reluctance synchronous motor (synchronous reluctance motor)

p1569[0...n] CI: Supplementary torque 3 / M_suppl 3

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 7010
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	3841[0]

Description: Sets the signal source for supplementary torque 3.

Dependency: See also: p3842

Notice: The signal input is after the torque limit (r1538, r1539). For vector drives, the signals that are entered are only limited by the current and power limits.

Note: The signal input is preferably used to enter the friction characteristic. The friction compensation is also effective if the speed controller output reaches its torque limits, but the current limits have still not been reached (this only applies to vector drives).

p1570[0...n] CO: Flux setpoint / Flux set

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6722
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	50.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the flux setpoint referred to rated motor flux.
The following applies for a synchronous reluctance motor:
Scaling the flux setpoint.

Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.

Note: For p1570 > 100%, the flux setpoint increases as a function of the load from 100% (no-load operation) to the setting in p1570 (above rated motor torque), if p1580 > 0% has been set.
The following applies for a synchronous reluctance motor:
The scaling allows the flux setpoint to be adapted when operating with load-dependent optimum flux characteristic or with constant flux setpoint.

p1571[0...n] CI: Supplementary flux setpoint / Suppl flux set

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6725
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the supplementary flux setpoint.

Notice: Low flux setpoints can cause the drive to stall at higher loads. This is the reason that the flux setpoint should only be adapted for slow load changes.

Note: The supplementary flux setpoint is limited to +/- 50 %.

p1572[0...n] Supplementary flux setpoint / Suppl flux set

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6726
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	100.0 [%]	0.0 [%]

Description: Separately-excited synchronous motor:
Sets the supplementary flux setpoint for the flux controller. The value is referred to the rated motor flux.
Synchronous-reluctance motor:
Sets the factor by which the flux is reduced when operating under no-load conditions and operating using the pulse technique.

Notice: Separately-excited synchronous motor:
The parameter should be set back to 0% again for normal closed-loop control operation.

Note: Separately-excited synchronous motor:
The parameter is used to optimize the flux controller. The current model is not influenced by the setting.

p1573[0...n] Flux threshold value magnetizing / Flux thr magnet

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6722
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	10.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the flux threshold value for enabling the speed setpoint and the end of magnetizing (r0056.4).

Note: The parameter only has an influence if the flux actual value reaches the threshold value p1573 more quickly during magnetizing than the time set in p0346. This is generally the case when selecting fast magnetization (p1401.6).
The parameter has no influence for flying restart (see p1200) and after DC braking (see p1231).

p1574[0...n] Voltage reserve dynamic / U_reserve dyn

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6723, 6724
	P group: Closed-loop control	**Unit group:** 5_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [Vrms]	150.0 [Vrms]	10.0 [Vrms]

Description: Sets a dynamic voltage reserve.

Note: In the field weakening range, it must be expected that the control dynamic performance is somewhat restricted due to the limited possibilities of controlling/adjusting the voltage. This can be improved by increasing the voltage reserve. Increasing the reserve reduces the steady-state maximum output voltage (r0071).

p1575[0...n] Voltage target value limit / U_tgt val lim

VECTOR_G (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6725
P group: - | **Unit group:** - | **Unit selection:** -
Not for motor type: REL | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
50.00 [%] | 300.00 [%] | 200.00 [%]

Description: Sets the limit of the voltage target value.
In steady-state field weakening operation this corresponds to the required output voltage.
The value of 100% refers to p0304.

Note: The output voltage is only limited if the maximum output voltage (r0071) minus the voltage reserve (p1574) corresponds to a value higher than p1575.
Limiting via p1575 allows the influence of the voltage ripple of the line voltage to be eliminated at the operating point.

p1576[0...n] Flux boost adaptation speed, lower / Flux boost n lower

VECTOR_G (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6725
P group: Closed-loop control | **Unit group:** 3_1 | **Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
0.00 [rpm] | 210000.00 [rpm] | 0.00 [rpm]

Description: Sets the lower adaptation speed of the flux boost.
Below this speed, p1570 is set as reference (setpoint) flux.

p1577[0...n] Flux boost adaptation speed upper / Flux boost n upper

VECTOR_G (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6725
P group: Closed-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
1.0 [%] | 10000.0 [%] | 200.0 [%]

Description: Sets the upper adaptation speed of the flux boost.
Above this speed, the rated motor flux (100 %) is set as reference (setpoint) flux.

Dependency: The parameter value refers to the lower adaptation speed of the flux boost.
See also: p1576

p1578[0...n] Flux reduction flux decrease smoothing time / Flux red dec t_sm

VECTOR_G (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6791
P group: Closed-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: ASM, PMSM, SESM, REL | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
20 [ms] | 5000 [ms] | 200 [ms]

Description: Sets the smoothing time for the flux setpoint when decreasing the flux due to flux reduction (p1581 < 100 %).

Dependency: See also: p1579

p1579[0...n] Flux reduction flux build-up smoothing time / Flux red up t_smth

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6791
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	5000 [ms]	4 [ms]

Description: Sets the smoothing time for the flux setpoint for the flux build-up due to flux reduction (p1581 < 100 %).

Dependency: See also: p1578

Note: An excessively long smoothing time extends the time until the maximum torque is reached from the no-load phase.

p1580[0...n] Efficiency optimization / Efficiency opt

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6722
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [%]	100 [%]	0 [%]

Description: Sets the efficiency optimization.

When optimizing the efficiency, the flux setpoint of the closed-loop control is adapted as a function of the load.

For p1580 = 100 %, under no-load operating conditions, the flux setpoint is reduced to 50 % of the rated motor flux.

Note: It only makes sense to activate this function if the dynamic response requirements of the speed controller are low.

In order to avoid oscillations, if required, the speed controller parameters should be adapted (increase Tn, reduce Kp).

Further, the smoothing time of the flux setpoint filter (p1582) should be increased.

p1581[0...n] Flux reduction factor / Flux red factor

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [%]	100 [%]	100 [%]

Description: Sets the factor to which the flux is reduced under no-load conditions.

For a value of 100%, the flux reduction is deactivated.

This parameter refers to the flux saved in the field weakening characteristic.

By reducing the flux, the losses in induction motors can be reduced under no-load conditions or at low torques. However, the time it takes to reach the maximum torque is extended.

Recommendation: For induction motors with closed rotor slots, we recommend that the integral time of the current controller (p1717) is increased to three times the value, for example.

For stable operation, the maximum field-weakening factor in operation with an encoder must be less than 16 and in operation without an encoder must be less than 4. Lower field weakening factors are recommended. The field weakening factor is calculated as follows:

(p1082 * 100 % * 600 V) / (p0348 * p1581 * p0070)

In order to reduce losses due to magnetizing and de-magnetizing, we recommend that the smoothing times are adapted for flux decrease (p1578) and flux build-up (p1579).

In order to reduce the losses as a result of building-up and reducing the torque, we recommend that the torque setpoint is smoothed (current setpoint filter (p1656 ...) or speed actual value filter (p1441)).

Note: It only makes sense to activate this function if there are low dynamic requirements placed on the speed controller and there are frequent phases with a low load.
In order to avoid oscillations, if required, the speed controller parameters should be adapted (decrease Kp (p1460, p1470), increase Tn (p1462, p1472)).
When used without an encoder, flux reduction is not possible for induction motors with closed rotor slots.

p1582[0...n] Flux setpoint smoothing time / Flux set t_smth

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6722, 6724, 6725
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
4 [ms]	5000 [ms]	15 [ms]

Description: Sets the smoothing time for the flux setpoint.

r1583 Flux setpoint smoothed / Flux set smth

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6722, 6723, 6724

Min:	**Max:**	**Factory setting:**
0 [ms]	1000 [ms]	0 [ms]

Description: Sets the smoothing time for the flux actual value.

p1586[0...n] Field weakening characteristic scaling / Field weak scal

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	80.0 [%]	120.0 [%]	100.0 [%]

Description: Sets the scaling of the precontrol characteristic for the start of field weakening.
For values above 100 % and for partial load situations, the field weakening starts at higher speeds.

Note: If the start of field weakening is shifted to lower speeds, then the voltage reserve is increased for partial load situations.
If the start of field weakening is shifted to higher speeds, the voltage reserve is appropriately reduced so that for fast load changes, it can be expected that this will have a negative impact on the dynamic performance.

r1589 Field-weakening current precontrol value / I_FieldWeak prectr

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6724
	P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, SESM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the precontrol value for the field weakening current.

p1590[0...n] Flux controller P gain / Flux controller Kp

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6723
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0	999999.0	10.0

Description: Sets the proportional gain for the flux controller.

Note: The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned.
When calculating controller parameters (p0340 = 4), this value is re-calculated.

p1592[0...n] Flux controller integral time / Flux controller Tn

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6723
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	10000 [ms]	30 [ms]

Description: Sets the integral time for the flux controller.

Note: The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned.
When calculating controller parameters (p0340 = 4), this value is re-calculated.

r1593[0...1] CO: Field weakening controller / flux controller output / Field/FI_ctrl outp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6723, 6724, 6726
	P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
	Not for motor type: REL, RESM	**Scaling:** p2002	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Arms]	- [Arms]	- [Arms]

Description: Display and connector output for the output of the field weakening controller (synchronous motor) or the output of the flux controller (separately excited synchronous motor, induction motor).

Index: [0] = PI output
[1] = I output

p1594[0...n] Field-weakening controller P gain / Field_ctrl Kp

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6724
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00	1000.00	0.00

Description: Sets the P gain of the field-weakening controller.

p1595[0...n] Field weakening controller additional setpoint / Field_ctrl add_set

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6726
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-80.00 [%]	50.00 [%]	0.00 [%]

Description: Sets an additional setpoint for the field weakening controller.
The value refers to the dynamic voltage reserve (p1574).

Note: For a value equal to zero, the field weakening controller is activated when the maximum voltage, calculated with the average value of the DC link voltage - and limited using p1575 - is reached.
Positive values mean that the field weakening controller intervenes later.
Negative values cause the field weakening controller to intervene earlier, so that the voltage can move away from the modulation depth limit.

p1596[0...n] Field weakening controller integral-action time / Field_ctrl Tn

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6723, 6724
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	10 [ms]	10000 [ms]	50 [ms]

Description: Sets the integral-action time of the field-weakening controller.

r1597 CO: Field weakening controller output / Field_ctrl outp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6723
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [%]	- [%]	- [%]

Description: Displays the output of the field weakening controller.
The value is referred to the rated motor flux.

r1598 CO: Total flux setpoint / Flux set total

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6714, 6723, 6724, 6725, 6726, 8020
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [%]	- [%]	- [%]

Description: Displays the effective flux setpoint.
The value is referred to the rated motor flux.

p1599[0...n] Flux controller excitation current difference / Flux ctr I_exc_dif

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	100.0 [%]	3.0 [%]

Description: Sets the permissible difference between the actual excitation current and the excitation current setpoint.
The excitation current flux controller is active within this difference.
If the difference lies outside the specified limit value, then the I component of the excitation current flux controller is kept. Instead of this, for the flux controller of the field-generating current, an additional I controller is switched in (integral time according to p1592).
If the difference again lies within the bandwidth, the I component of the excitation current flux controller is re-activated and the I component of the flux controller of the field-generating current is reduced as an exponential function with respect to time. The reduction of the I component over time depends on the rotor time constant (r0384).

p1600[0...n] P flux controller P gain / P flux ctrl Kp

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0	999999.0	10.0

Description: Sets the proportional gain of the P flux controller for separately excited synchronous motors (SESM).
Note: The value is automatically pre-assigned dependent on the motor when the drive system is first commissioned.
When calculating controller parameters (p0340 = 4), this value is re-calculated.

p1601[0...n] Current injection ramp time / I_inject t_ramp

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6790
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1 [ms]	10000 [ms]	20 [ms]

Description: Synchronous-reluctance motor:
Sets the ramp-up time of the current setpoint (p1610, p1611) when switching over from closed-loop controlled to open-loop controlled operation.
Synchronous motor:
Sets the ramp-down time of the current setpoint when switching over from open-loop controlled to closed-loop controlled operation.

r1602 CO: P flux controller output / P flux ctrl outp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6726, 6727
	P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the output of the P flux controller for separately excited synchronous motors (SESM).

p1604[0...n] Pulse technique current limit / Pulse current lim

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the effective current limit within the pulse technique.

Note: The saturation characteristic of the motor defines the available operating range for the pulse technique.
This operating range can be adjusted using the current limit.
When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.
Otherwise, the rated motor current is used as pre-assigned value.

p1605[0...n] Pulse technique pattern configuration / Pulse pat config

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1	5	2

Description: Sets the applied test signal and evaluation technique for estimating the continuous rotor position.
Remark:
See p1750 to activate the test signal technique.

Value:
1: 2p_dpm
2: 4p_dppmm
3: 2p_dpm_model
4: 2p_dpm_qpm
5: 2p_apm_bpm

Dependency: See also: p1750

Note: When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.

r1606 CO: Pulse technique pattern actual / Pulse pat act

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	5	-

Description: Display and connector output of the currently applied test signal for estimating the continuous rotor position.

Value:
0: None
1: 2p_dpm
2: 4p_dppmm
3: 2p_dpm_model
4: 2p_dpm_qpm
5: 2p_apm_bpm

Dependency: See also: p1605, p1750

p1607[0...n] Pulse technique excitation / Pulse excitation

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [mVs]	20000.000 [mVs]	32.000 [mVs]

Description: Sets the excitation amplitude (voltage-time pulse) for the pulse technique for estimating the continuous rotor position.
For load current-dependent adaptation (p3371 ... p3373), this amplitude applies at operating point 1.

Dependency: See also: p1605, p1750, p3371, p3372, p3373

r1608[0...8] CO: Pulse technique response / Pulse response

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** 6_5	**Unit selection:** p0505
Not for motor type: ASM, SESM, REL	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [A]	- [A]	- [A]

Description: Display and connector output for the components of the signal response to the excitation of the pulse technique.

Index:
[0] = Total x
[1] = Total y
[2] = Total abs
[3] = Total x smooth
[4] = Total y smooth
[5] = Reflection x
[6] = Reflection y
[7] = Reflection abs
[8] = Offset abs

Dependency: See also: p1605, p1607, p1750

Note: For index [0...8]:
The reference system of components x and y depends on the actual pattern (r1606).
For fixed stator excitation, the following applies: x = alpha, y = beta
For fixed rotor excitation, the following applies: x = d, y = q
For index [3, 4]:
Displays the smoothed values from indices 0 and 1 (smoothing time p0045).

p1609[0...n] I/f operation current setpoint / I/f op I_set

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6727
P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the stator current setpoint for operation of a separately excited synchronous motor (SESM) in operating mode I/f (p1300 = 18).

p1610[0...n] Torque setpoint static (sensorless) / M_set static

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6700, 6721, 6722, 6726
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-200.0 [%]	200.0 [%]	50.0 [%]

Description: Sets the static torque setpoint for sensorless vector control in the low speed range.
This parameter is entered as a percentage referred to the rated motor torque (r0333).
For sensorless vector control, in the speed-controlled operating range (open loop), an absolute current is impressed. p1610 represents the maximum load that occurs at a constant setpoint speed.

Caution: For separately-excited synchronous motors (p0300 = 5), the parameter is also active for vector control with sensor and independent of the speed (see function diagram, 6726).

Notice: p1610 should always be set to at least 10 % higher than the maximum steady-state load that can occur.

Note: For p1610 = 0%, a current setpoint is calculated that corresponds to the no-load case (ASM: rated magnetizing current, RESM: no-load magnetizing current).
For p1610 = 100 %, a current setpoint is calculated that corresponds to the rated motor torque.
Negative values are converted into positive setpoints in the case of induction and permanent-magnet synchronous motors as well as closed-loop controlled reluctance motors.

p1611[0...n] Additional acceleration torque (sensorless) / M_suppl_a

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6700, 6721, 6722, 6726
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [%]	200.0 [%]	30.0 [%]

Description: Setting the dynamic torque setpoint for small speed ranges with sensorless vector control.
This parameter is entered as a percentage referred to the rated motor torque (r0333).

Caution: For separately-excited synchronous motors (p0300 = 5), the parameter is also active for vector control with sensor and independent of the speed during the acceleration phase (r1199.2 = 1, see function diagram, 6726).

Note: When accelerating and braking p1611 is added to p1610 and the resulting total torque is converted into an appropriate current setpoint and controlled.
For pure accelerating torques, it is always favorable to use the torque precontrol of the speed controller (p1496).

p1612[0...n] Current setpoint magnetizing open-loop controlled / Id_set ctrl

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the magnetizing current setpoint in the open-loop controlled encoderless operation.
The value is only valid during the current model orientation.

Dependency: See also: p1610, p1611

Note: The value is effective at speeds less than p1755 and represents a reserve for a possibly existing load torque or torque error in the moment of inertia.

r1614 EMF maximum / EMF max

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6725
	P group: Displays, signals	**Unit group:** 5_1	**Unit selection:** p0505
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2001	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the actual maximum possible electromotive force (EMF) of the separately excited synchronous motor.

Dependency: The value is the basis for the flux setpoint.
The maximum possible EMF depends on the following factors:
- Actual DC link voltage (r0070).
- Maximum modulation depth (p1803).
- Field-generating and torque-generating current setpoint.

p1616[0...n] Current setpoint smoothing time / I_set t_smth

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6721, 6722, 6726
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	4 [ms]	10000 [ms]	40 [ms]

Description: Sets the smoothing time for the current/torque setpoint in the open-loop-controlled operating range in the case of sensorless vector control.

Note: This parameter is only effective in the range where current is injected for sensorless vector control.
For permanent magnet synchronous motors, the parameter is effective over the complete speed range.
For induction motors, the current setpoint is calculated from p1610 and p1611 and for separately excited synchronous motors the torque setpoint is calculated from p1610 and p1611.

r1617 CO: Torque setpoint (controlled) / M_set ctrl

VECTOR_G (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 6726
P group: Closed-loop control
Unit group: -
Unit selection: -
Not for motor type: ASM, PMSM, REL, RESM
Scaling: -
Expert list: 1

Min:	Max:	Factory setting:
- [Nm]	- [Nm]	- [Nm]

Description: Torque setpoint for sensorless control of the separately excited synchronous motor in the open-loop-controlled operating range (under p1755 * p1756).

r1618 Current model controller precontrol / I_mod_ctrl prectrl

VECTOR_G (n/M)

Can be changed: -
Calculated: -
Access level: 4
Data type: FloatingPoint32
Dyn. index: -
Function diagram: -
P group: Closed-loop control
Unit group: 6_2
Unit selection: p0505
Not for motor type: ASM, PMSM, REL, RESM
Scaling: p2002
Expert list: 1

Min:	Max:	Factory setting:
- [Arms]	- [Arms]	- [Arms]

Description: Displays the precontrol value of the current model controller.
It involves a magnetizing current in the d-direction.

p1619[0...n] Setpoint/actual value tracking threshold / SetAct track thr

VECTOR_G (n/M)

Can be changed: U, T
Calculated: CALC_MOD_ALL
Access level: 3
Data type: FloatingPoint32
Dyn. index: DDS, p0180
Function diagram: 6727
P group: Closed-loop control
Unit group: 6_2
Unit selection: p0505
Not for motor type: ASM, PMSM, REL, RESM
Scaling: p2002
Expert list: 1

Min:	Max:	Factory setting:
0.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Threshold for setpoint/actual value tracking of the stator current in the q axis of the current model.

p1620[0...n] Stator current minimum / I_stator min

VECTOR_G (n/M)

Can be changed: U, T
Calculated: CALC_MOD_ALL
Access level: 3
Data type: FloatingPoint32
Dyn. index: DDS, p0180
Function diagram: 6727
P group: Closed-loop control
Unit group: 6_2
Unit selection: p0505
Not for motor type: ASM, PMSM, REL, RESM
Scaling: -
Expert list: 1

Min:	Max:	Factory setting:
-10000.00 [Arms]	10000.00 [Arms]	0.00 [Arms]

Description: Sets the minimum stator current for separately excited synchronous motors (SESM).
A negative value means that the field-generating stator current (d-axis) has a negative sign. The valid value is internally limited to 50% of the rated motor current (p0305).

p1621[0...n] Changeover speed inner cos phi = 1 / n_chgov cos phi=1

VECTOR_G (n/M)

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6727
P group: Closed-loop control | **Unit group:** 3_1 | **Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the speed where a change is made from the inner to the outer cos phi = 1.
If the value that is entered exceeds the rated speed, then a change is made to the inner cos phi = 1 over the complete speed range.

p1622[0...n] Field-generating current setpoint smoothing time constant / Id_set Tc_smth

VECTOR_G (n/M)

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 6727
P group: Closed-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.1 [ms]	200.0 [ms]	20.0 [ms]

Description: Sets the smoothing time constant for the setpoint of the field-generating current components.
The current filtered in this way is included in the calculation of the cos phi.

r1623[0...1] Field-generating current setpoint (steady-state) / Id_set stationary

VECTOR_G (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** 6723, 6726, 6727
P group: Displays, signals | **Unit group:** 6_2 | **Unit selection:** p0505
Not for motor type: PMSM, REL, RESM | **Scaling:** p2002 | **Expert list:** 1

Min:	Max:	Factory setting:
- [Arms]	- [Arms]	- [Arms]

Description: Displays the steady-state field generating current setpoint (Id_set).

r1624 Field-generating current setpoint total / Id_set total

VECTOR_G (n/M)

Can be changed: - | **Calculated:** - | **Access level:** 4
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** 6640, 6721, 6723, 6727
P group: Displays, signals | **Unit group:** 6_2 | **Unit selection:** p0505
Not for motor type: REL | **Scaling:** p2002 | **Expert list:** 1

Min:	Max:	Factory setting:
- [Arms]	- [Arms]	- [Arms]

Description: Displays the limited field-generating current setpoint (Id_set).
This value comprises the steady-state field-generating current setpoint r1623 and a dynamic component that is only set when changes are made to the flux setpoint.

p1625[0...n] Excitation current setpoint calibration / I_exc_set cal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6727
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
10.0 [%]	200.0 [%]	100.0 [%]

Description: Sets the gain factor to weight the excitation current setpoint.

r1626[0...1] CO: Excitation current setpoint / I_exc_set

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: Displays the calculated excitation current setpoint.
The following applies for index 0:
For direct excitation, the value is referred to p0390. For brushless excitation, the value is referred to p0690.
The following applies for index 1:
The value is referred to p0390.

Index: [0] = Excitation current of the excitation equipment
[1] = Excitation current for direct excitation

Dependency: See also: p0390, p0690

r1627 CO: Current model load angle / I_mod load angle

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2005	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [°]	- [°]	- [°]

Description: Displays the load angle of the current model.

p1628[0...n] Current model controller dynamic factor / I_mod_ctr dyn_fact

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6727
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1 [%]	400 [%]	50 [%]

Description: Sets the dynamic response factor for the current model controller.

p1629[0...n] Current model controller P gain / I_mod_ctrl Kp

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6727
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000	100000.000	0.000

Description: Sets the proportional gain for the current model controller.
This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.

p1630[0...n] Current model controller integral time / I_mod_ctrl Tn

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6727
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the integral time for the current model controller.
This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.

r1631 Current model controller P gain effective / I_mod ctrl Kp eff

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the effective P gain of the current model controller.

r1632 Current model controller integral time effective / I_mod_ctrl Tn eff

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ms]	- [ms]	- [ms]

Description: Displays the effective integral time of the current model controller.

r1633 Current model flux setpoint / I_mod flux set

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [%]	- [%]	- [%]

Description: Displays the effective flux setpoint of the current model.
The value is referred to the rated motor flux.

r1634 Current model flux actual value / I_mod flux ActV

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: Displays the effective flux actual value of the current model.
The value is referred to the rated motor flux.

r1635 Current model controller I component / I_mod_ctrl I comp

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the I component of the current model controller.

r1636 Current model controller output / I_mod_ctrl outp

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the output of the current model controller.

r1637 Current model magnetizing current d axis / I_mod I_mag d-ax

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the magnetizing current of the current model in the d-axis.

r1638 Current model magnetizing current q axis / I_mod I_mag q-ax

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the magnetizing current of the current model in the q-axis.

r1639 CO: Current model Isq after actual value tracking / I_mod Isq track

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
	P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the stator current in the q axis after the current actual value tracking.

p1640[0...n] CI: Excitation current actual value signal source / I_exc_ActV s_s

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 6727
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the excitation current actual value

r1641[0...1] Excitation current actual value / I_exc_ActV

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727, 8020
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [%]	- [%]	- [%]

Description: Displays the excitation current actual value that is read in.

Index: [0] = Excitation current of the excitation equipment
[1] = Excitation current for direct excitation

Dependency: See also: p0390

Note: The following applies for index 0:
For direct excitation, the value is referred to p0390. For brushless excitation, the value is referred to p0690.
The following applies for index 1:
The value is referred to p0390.

p1642[0...n] Minimum excitation current / Min I_exc

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6727
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.1 [%]	50.0 [%]	5.0 [%]

Description: Sets the minimum excitation current.
This means that negative excitation currents can be avoided.

p1643[0...n] Minimum excitation current closed-loop control gain factor / I_exc_min Kp

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6727
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00	5.00	0.40

Description: Sets the gain factor for the minimum excitation current, closed-loop control.
This is active if the excitation current is below 75 % of p1642.

Dependency: See also: p1642

r1644 CO: Excitation current monitoring output / I_exc_mon outp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6727
	P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** p2002	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the output of the excitation current monitoring for separately excited synchronous motors.

p1645[0...7] BI: Excitation feedback signals signal source / Exc FS s_s

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 6495
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	[0...6] 1 [7] 0

Description: Sets the signal source for the individual feedback signals from the excitation.

Index:
[0] = Excitation ready for switching on
[1] = Excitation ready
[2] = Excitation operational
[3] = Excitation group signal fault
[4] = Excitation group signal alarm
[5] = Not used
[6] = Not used
[7] = Excitation at the voltage limit

Dependency: See also: r1649

p1646 Excitation monitoring time / Excit t_mon

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6495
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	2.0 [s]	1300.0 [s]	20.0 [s]

Description: Sets the monitoring time of the excitation.
After an ON command, the feedback signal must be received within this monitoring time.

Note: After the on command for the excitation (r1648.0 = 1), its feedback signal must be available at r1649.1 within this monitoring time (BI: p1645[1]).
The same monitoring time is effective after the excitation is enabled for operation (r1648.3 = 1) up to the feedback signal "excitation operational" (r1649.2 = 1, BI: p1645[2]).

p1647 Excitation switch-off delay time / Exc t_off

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6495
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [s]	5.0 [s]	0.8 [s]

Description: Sets the switch-off delay time to shut down the excitation equipment.

Note: The delay time starts if, when switching off, r0863.0 = 0.
r1648.0 and r1648.3 are reset at the end of the delay time.

r1648.0...11 CO/BO: Excitation control word / Excitation STW

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 6495
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the control word for the excitation equipment.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Power up excitation	Yes	No	-
01	Excitation no OFF2	Yes	No	-
02	Excitation no OFF3	Yes	No	-
03	Excitation operation enable	Yes	No	-
07	Excitation acknowledge fault	Yes	No	-
10	Reserved	-	-	-
11	Reverse field excitation invert excitation current setpoint	Yes	No	-

Note: For bit 00:
This bit is set dependent on r0863.0.

r1649.0...11 CO/BO: Excitation status word / Excitation ZSW

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 6495
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the status word of the excitation equipment.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Excitation ready for switching on feedback signal	Yes	No	-
01	Excitation ready feedback signal	Yes	No	-
02	Excitation operational feedback signal	Yes	No	-
03	Excitation group signal fault	Yes	No	-
07	Excitation group signal alarm	Yes	No	-
08	Excitation at the voltage limit	Yes	No	-
11	Excitation voltage present at the power unit	Yes	No	-

Dependency: See also: p1645
See also: A49204

r1650 Current setpoint torque-generating before filter / Iq_set before filt

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 5710
P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Displays the torque generating current setpoint Iqset after the torque limits and the clock cycle interpolation is ahead of the current setpoint filters.

r1651 CO: Torque setpoint function generator / M_set FG

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** 7_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Nm]	- [Nm]	- [Nm]

Description: Displays the torque setpoint of the function generator.

p1653[0...n] Current setpoint torque-generating smoothing time minimum / Isq_s t_smth min

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6710
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.1 [ms]	20.0 [ms]	0.1 [ms]

Description: Sets the minimum smoothing time constant for the setpoint of the torque-generating current components.

p1654[0...n] Curr. setpoint torque-gen. smoothing time field weakening range / Isq_s T_smth FW

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6710
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.1 [ms]	50.0 [ms]	4.8 [ms]

Description: Sets the smoothing time constant for the setpoint of the torque-generating current components.
Note: The smoothing time does not become effective until the field-weakening range is reached.

p1655[0...4] CI: Current setpoint/Speed actual value filter nat. frequency tuning / I/n_set_filt f_n

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6700, 6710
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for tuning the natural frequency of the current setpoint filter 1, 2 and speed actual value filter 5.

Index: [0] = Filter 1
[1] = Filter 2
[2] = Reserved
[3] = Reserved
[4] = Filter 5

p1656[0...n] Current setpoint/Speed actual value filter activation / I_set_filt act

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Function diagram:** 4715, 6710
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0001 bin

Description: Setting for activating/deactivating the current setpoint filter 1, 2 and speed actual value filter 5.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Filter 1	Active	Inactive	-
01	Filter 2	Active	Inactive	-
04	Filter 5	Active	Inactive	-

Dependency: The individual current setpoint/speed actual value filters are parameterized starting at p1657.

Note: If not all of the filters are required, then the filters should be used consecutively starting from filter 1.

p1657[0...n] Current setpoint filter 1 type / I_set_filt 1 type

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 5710, 6710
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	2	1

Description: Sets the current setpoint filter 1 as low pass (PT2) or general 2nd-order filter.

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

Note: For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

p1658[0...n] Current setpoint filter 1 denominator natural frequency / I_set_filt1 fn_den

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 5710, 6710
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description: Sets the denominator natural frequency for current setpoint filter 1 (PT2, general filter).

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1659[0...n] Current setpoint filter 1 denominator damping / I_set_filt 1 D_den

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 5710, 6710
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.001	10.000	0.700

Description: Sets the denominator damping for current setpoint filter 1.

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1660[0...n] Current setpoint filter 1 numerator natural frequency / I_set_filt1 fn_num

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 5710, 6710
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -

	Min:	**Max:**	**Factory setting:**
	0.5 [Hz]	16000.0 [Hz]	1999.0 [Hz]

Description: Sets the numerator natural frequency for current setpoint filter 1 (general filter).

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1661[0...n] Current setpoint filter 1 numerator damping / I_set_filt 1 D_num

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 5710, 6710
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000	10.000	0.700

Description: Sets the numerator damping for current setpoint filter 1.

Dependency: The current setpoint filter 1 is activated via p1656.0 and parameterized via p1657 ... p1661.

p1662[0...n] Current setpoint filter 2 type / I_set_filt 2 type

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 5710, 6710
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1	2	1

Description: Sets current setpoint filter 2 as lowpass filter (PT2) or general 2nd order filter.

Value:
1: PT2 low pass
2: General 2nd order filter

Dependency: Current setpoint filter 2 is activated via p1656.1 and parameterized via p1662 ... p1666.

Note: For a general 2nd order filter, by inserting the same natural frequency in both the numerator and in the denominator, i.e. bandstop frequency, a bandstop filter is implemented. If the numerator damping of zero is selected, the bandstop frequency is completely suppressed.

The denominator damping can be determined from the equation for the 3 dB bandwidth:

f_3dB bandwidth = 2 * D_denominator * f_bandstop frequency

p1663[0...n] Current setpoint filter 2 denominator natural frequency / I_set_filt2 fn_den

Min:	**Max:**	**Factory setting:**
0.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the factor for the current controller P gain in the adaptation range (d-current > p1711).
The value is referred to p1720.

Dependency: See also: p1710, p1711, p1720

Notice: When selecting a catalog motor (p0301), this parameter is automatically pre-assigned and is write protected. Information in p0300 should be carefully observed when removing write protection.

Note: For p1712 = 100 % or p1402.2 = 0, the current controller adaptation is disabled and p1720 is effective over the entire range.

p1715[0...n] Current controller P gain / I_ctrl Kp

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6700, 6714, 7017
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000	100000.000	0.000

Description: Sets the proportional gain of the current controller for the lower adaptation current range.
This value is automatically pre-set using p3900 or p0340 when commissioning has been completed.

Dependency: See also: p0391, p0392, p0393

Note: For p0393 = 100 %, the current controller adaptation is disabled and p1715 is effective over the entire range.

p1717[0...n] Current controller integral-action time / I_ctrl Tn

	Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the integral component of the Isd current controller (flux-generating current, PI controller).

r1725 Isd controller integral component limit / Isd_ctrl I_limit

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6714
	P group: Closed-loop control	**Unit group:** 5_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the limit value for the integral component of the Isd current controller.

p1726[0...n] Quadrature arm decoupling scaling / Transv_decpl scal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6714
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [%]	200.0 [%]	75.0 [%]

Description: Sets the scaling of the quadrature arm decoupling

Note: This parameter is ineffective for sensorless vector control. In this case, p1727 is always used. If p1726 is set to 0, then the quadrature de-coupling is deactivated. The integral component of the Isd current controller remains effective in the complete speed control range.

For the closed-loop control of synchronous motors, this parameter is used to scale the current controller de-coupling.

p1727[0...n] Quadrature arm decoupling at voltage limit scaling / TrnsvDecplVmaxScal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6714
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [%]	200.0 [%]	50.0 [%]

Description: Sets the scaling of quadrature arm decoupling when the voltage limit is reached.

r1728 De-coupling voltage direct axis / U_dir-axis_decoupl

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6714
P group: Closed-loop control	**Unit group:** 5_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the actual output of the quadrature channel de-coupling for the d axis.

r1729 De-coupling voltage quadrature axis / U_quad_decoupl

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6714
P group: Closed-loop control	**Unit group:** 5_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Vrms]	- [Vrms]	- [Vrms]

Description: Displays the actual output of the quadrature channel de-coupling for the q axis.

p1730[0...n] Isd controller integral component shutdown threshold / Isd ctrl Tn shutd

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
30 [%]	150 [%]	30 [%]

Description: Sets the speed threshold for deactivating the integral component of the Isd controller.

The d current controller is only effective as P controller for speeds greater than the threshold value. Instead of the integral component, the quadrature arm decoupling is effective.

Warning: For settings above 80%, the d current controller is active up to the field weakening limit. When operated at the voltage limit, this can result in an unstable behavior. In order to avoid this, the dynamic voltage reserve p1574 should be increased.

Note: The parameter value is referred to the synchronous rated motor speed.

p1731[0...n] Isd controller combination current time component / Isd ctr I_combi T1

VECTOR_G (n/M)

Index: [0] = Unsmoothed
[1] = Smoothed with p0045

p1740[0...n] Gain resonance damping for encoderless closed-loop control / Gain res_damp

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000	10.000	0.025

Description: Defines the gain of the controller for resonance damping for operation with sensorless vector control in the range that current is injected.

p1744[0...n] Motor model speed threshold stall detection / MotMod n_thr stall

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	100.00 [rpm]

Description: Sets the speed threshold value to detect a stalled motor.
If the adaptation controller output exceeds the parameterized speed difference, then in status word r1408.11 is set = 1.

Dependency: If a stalled drive is detected (r1408.11 = 1), fault F07902 is output after the delay time set in p2178.
See also: p2178

Note: Speed monitoring is only effective in operation with a speed encoder (refer to p1300).
Stalling is also identified if steps/jumps occur in the speed signal, which exceed the value in p0492.

p1745[0...n] Motor model error threshold stall detection / MotMod ThrStall

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	2000.0 [%]	5.0 [%]

Description: Sets the fault threshold in order to detect a motor that has stalled.
If the error signal (r1746) exceeds the parameterized error threshold, then status signal r1408.12 is set to 1.

Dependency: If a stalled drive is detected (r1408.12 = 1), fault F07902 is output after the delay time set in p2178.
See also: p2178

Note: Monitoring is only effective in the low-speed range (below p1755 * (100% - p1756)).
For induction motors (ASM), when operated with speed encoder, the following applies:
For p1745 = 2000%, checking the fault signal r1746 is deactivated, and the stall monitoring is realized solely by evaluating the flux difference.

r1746 Motor model error signal stall detection / MotMod sig stall

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [%]	- [%]	- [%]

Description: Signal to initiate stall detection

Note: The signal is not calculated while magnetizing and only in the low speed range (below p1755 * (100 % - p1756)).

p1747[0...n] Motor model pulse technique transition speed / MotMod puls tech n

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	0.00 [rpm]

Description: Sets the transition (corner) speed for the smooth and bumpless transition into the small signal motor model for encoderless operation of the synchronous-reluctance motor (RESM).

Note: RESM: reluctance synchronous motor (synchronous reluctance motor)

p1748[0...n] Motor model changeover speed lower / MotMod n_chgov low

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [%]	90.00 [%]	50.00 [%]

Description: Separately excited synchronous motor:
Sets the lower speed for the transition "n_set -> n_act" in encoderless operation.
This value is entered as a percentage referred to p1749.

Dependency: See also: p1749, p1752

p1749[0...n] Motor model upper changeover speed / increase changeover speed / Up/incr n_chgov

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [%]	99.00 [%]	50.00 [%]

Description: Separately excited synchronous motor:
Sets the upper speed for the transition "n_set -> n_act" in sensorless operation.
This value is entered as a percentage of p1755.
Induction motor without speed encoder:
Depending on the motor data, the drive has calculated a minimum value of the operating frequency for rugged operation.
If the minimum value is greater than the lower changeover limit parameterized with p1755 * (1 - 2 * p1756), then the difference is displayed using p1749 * p1755. The parameter value cannot be changed.

Dependency: See also: p1748, p1752, p1755, p1756

Note: RESM: reluctance synchronous motor (synchronous reluctance motor)

p1750[0...n] Motor model configuration / MotMod config

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0000 0000 0000 0000 bin

Description: Sets the configuration for the motor model.
Bit 0 = 1: Forces open-loop speed-controlled starting (ASM).
Bit 1 = 1: Forces the system to pass through frequency zero, open-loop-controlled (ASM).
Bit 2 = 1: Drive remains in full closed-loop control mode, even at zero frequency (ASM).
Bit 3 = 1: Motor model evaluates the saturation characteristic (ASM).
Bit 4 = 1: Time-controlled change between current and observer models (ASM).
Bit 5 = 1: test signal technique (pulse technique) to estimate the progressing (RESM, PMSM).
Bit 6 = 1: If the motor is blocked, sensorless vector control remains speed-controlled (ASM).
For a stalled (blocked) synchronous motor (PMSM), the sensorless vector control remains open-loop speed controlled.
Bit 7 = 1: Use rugged switchover limits to switchover the model between open-loop and closed-loop controlled operation (ASM).
Bit 8 = 1: Open-loop speed controlled operation independent of the speed setpoint (except for OFF3) (ASM).

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	Controlled start	Yes	No	-
	01	Controlled through 0 Hz	Yes	No	-
	02	Closed-loop ctrl oper. down to zero freq. for passive loads	Yes	No	-
	03	Motor model Lh_pre = f(PsiEst)	Yes	No	-
	04	Model changeover	Time controlled	Freq. controlled	-
	05	Closed-loop controlled operation down to f = 0 Hz w/ test signal	Yes	No	-
	06	Closed-/open-loop controlled when motor is blocked	Yes	No	-
	07	Use rugged changeover limits	Yes	No	-
	08	Closed-loop controlled until wait time p1758 has expired	Yes	No	-

Caution:

Do not use bit 6 = 1 if the motor can be slowly reversed by the load at the torque limit. Long delay times due to blocking (p2177 > p1758) can cause the motor to stall. In this case you should deactivate the function or use closed-loop control throughout the speed range (note the information re bit 2 = 1).

Note: Bit 0 ... 3 only have influence for sensorless vector control, bit 4 only for vector control with encoder. Bit 2 is pre-assigned depending on p0500.

For bit 02 = 1:

The sensorless vector control is effective down to zero frequency. A change is not made into the open-loop speed controlled mode.

This operating mode is possible for passive loads. These include applications where the load itself does not generate any active torque and therefore only acts reactively to the drive torque of the induction motor.

If bit 2 = 1, then bit 3 is automatically set to 1. Manual deselection is possible and may be sensible if the saturation characteristic (p1960) was not measured for third-party motors. Generally, for standard SIEMENS motors, the already pre-assigned (default value) saturation characteristic is adequate.

When the bit is set, the selection of bits 0 and 1 is ignored.

For bit 02 = 0:

If the model feedback is deactivated (p1784 = 0), with bit 2 = 0, then bit 3 is also automatically set to 0.

For bit 05:

This test signal technique (pulse technique) is only supported for synchronous-reluctance motors (RESM) and permanent-magnet synchronous motors (PMSM) with power units (Motor Modules) in the "Booksize" format.

It is only possible to change bit 5 when the pulses are inhibited.

For p1750.5 = 1, initially p1810.3 is set, and then a system power up is requested via F01040 to configure the power unit in the oversampling mode.

When deactivating p1750.5 = 0, p1810.3 remains unchanged. As a consequence, to undo the configuration of the power unit from the oversampling mode you must perform the following

(after manually deselecting p1750.5), then initially p1810.3 must be manually deleted - and then a manual warm restart initiated.

As an alternative to a warm restart: save the parameters and carry out a POWER ON (switch-off/switch-on).

When the function "safety without encoder" (p9306/p9506) is activated, this setting is not permissible and results in monitoring errors.

For bit 06 = 1:

The following applies for sensorless vector control of induction motors:

For a blocked motor (see p2175, p2177) the time condition in p1758 is bypassed and a change is not made into open-loop controlled operation.

The following applies for sensorless vector control of synchronous motors:

For a blocked motor (see p2175, p2177), the speed ramp-function generator is held in open-loop speed controlled operation, and a switchover is not made into closed-loop controlled operation.

For bit 07 = 1:

The following applies for sensorless vector control of induction motors:

If the changeover limits are parameterized too low (p1755, p1756), then they are automatically increased to rugged values by the absolute amount p1749 * p1755.

The effective time condition for changing over into open-controlled operation is obtained from the minimum of p1758 and 0.5 * r0384.

Activation can make sense for applications that demand a high torque at low frequencies and therefore low speed gradients.

Adequate parameterization must be ensured (p1610, p1611).

For bit 08 = 1: no influence on the functionality of bits 0, 1, 2

The following applies for sensorless vector control of induction motors:

Changeover into open-loop speed controlled operation is no longer dependent on the speed setpoint (except for OFF3), but instead is essentially dependent on time condition p1758. As a consequence, a drive can be started or reversed in closed-loop speed controlled operation with setpoints from an external control system, if these briefly lie in the open-loop speed control range.

r1751 Motor model status / MotMod status

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the status of the motor model.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Controlled operation	Active	Inactive	6721
01	Set ramp-function generator	Active	Inactive	-
02	Stop RsLh adaptation	Yes	No	-
03	Feedback	Active	Inactive	-
04	Encoder operation	Active	Inactive	-
05	Holding angle	Yes	No	-
06	Acceleration criterion	Active	Inactive	-
07	Set angle integrator PMSM, RESM	Yes	No	-
08	Stop Kt adaptation PMSM	Yes	No	-
09	PolID active encoderless PMSM, RESM	Yes	No	-
10	I injection PMSM, RESM	Yes	No	-
11	Speed controller output cannot be set to zero	Yes	No	-
12	Rs adapt waits	Yes	No	-
13	Motor operation	Yes	No	-
14	Stator frequency sign	Positive	Negative	-
15	Torque sign	Motor mode	Regenerative mode	-
16	Pulse technique injection active PMSM, RESM	Yes	No	-
17	Operation with rugged model feedback	Enabled	Inhibited	-
18	Operation of the current model with current feedback	Enabled	Inhibited	-
19	Current feedback in the current model	Active	Inactive	-
20	Rugged increase of the changeover limits	Active	Inactive	-
21	Motor blocked (RFG stop) PMSM	No	Yes	-

Note:

PMSM: permanent-magnet synchronous motor

For bit 17:

Displays the enabled status of the rugged model feedback (p1784).

The feedback is used to increase the parameter ruggedness of the motor model and is effective in the operating range of the two-component closed loop current control.

For bit 18:

Displays the status when enabling the differential current feedback in the current model for operation with encoder.

The function is automatically enabled with p1784 > 0 or p1731 > 0.

The feedback is used for a rugged change between the current model and complete machine model with active rugged model feedback and combination current.

For bit 19:

Displays the currently active stator circuit feedback in current model operation.

For bit 20:

Displays the currently effective increase of the changeover limits by the value p1749 * p1755.

For bit 21:

For a blocked synchronous motor, the speed ramp-function generator is held in the open-loop speed controlled operating range if the torque setpoint reaches the torque limit and the speed is less than the threshold value in p2175.

p1752[0...n] Motor model changeover speed operation with encoder / MotMod n_chgov enc

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]

Description: Sets the speed to change over the motor model for operation with encoder.

Dependency: In U/f characteristic mode the parameter is of no significance.

Using the friction characteristic for operation with encoder:

When changing the motor model changeover speed p1752, the points along the friction characteristic should be recalculated (p0340 = 5) and the friction characteristic recorded again (p3845). For slight changes, only the associated friction characteristic points must be recorded (see p3844).

See also: p1756

p1753[0...n] Motor model changeover speed hysteresis operation with encoder / MotMod n_chgovHysE

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	90.0 [%]	0.0 [%]

Description: Sets the hysteresis for the changeover speed of the motor model for operation with speed encoder.

Dependency: See also: p1752

Note: The value refers to p1752.

In the case of separately excited synchronous motors, the lower hysteresis value is calculated with p1752 * p1753; in the case of all other types of motor, p1752 * (1 - p1753) is used.

p1754[0...n] Flux angle difference smoothing time / Angle diff t_smth

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6733
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.1 [ms]	10000.0 [ms]	5.0 [ms]

Description: Sets the smoothing time constant to filter the main flux angle difference from the voltage and current models.

The filtered value is included in the calculation of the total flux angle.

PMSM:

Sets the smoothing time constant to display the angular difference between the motor model an encoder.

Note: In the case of a separately excited synchronous motor (SESM) and sensorless vector control, the parameter must be set to the minimum value to improve motor model changeover.

PMSM: permanent-magnet synchronous motor

SESM: separately excited synchronous motor

p1755[0...n] Motor model changeover speed encoderless operation / MotMod n_chgSnsorl

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	210000.00 [rpm]

Description: Sets the speed to change over the motor model to encoderless operation.

Dependency: In U/f characteristic mode the parameter is of no significance.

See also: p1749, p1756

Notice: The changeover speed represents the steady-state minimum speed up to which the motor model can be used in sensorless steady-state operation.

If the stability is not adequate close to the changeover speed, it may make sense to increase the parameter value.

Note: The changeover speed applies for the changeover between open-loop and closed-loop control mode.

p1756 Motor model changeover speed hysteresis encoderless operation / MotMod n_chgov hys

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6730, 6731, 6732, 6733
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	95.0 [%]	50.0 [%]

Description: Sets the hysteresis for the changeover speed of the motor model for encoderless operation.

In the case of separately excited synchronous motors, the lower hysteresis value is calculated with p1756 * p1755; in the case of all other types of motor, p1755 * (1 - p1756) is used.

Dependency: In U/f characteristic mode the parameter is of no significance.

See also: p1755

Note: The parameter value refers to p1755.

In the case of separately excited synchronous motors, the lower hysteresis value is calculated with p1755 * p1756; in the case of all other types of motor, p1755 * (1 - p1756) is used.

p1757[0...n] Motor model w/o enc. op./cl.-loop controlled stab. controller Kp / MotMod w/o enc Kp

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.01	10.00	0.70

Description: Sets the gain of the transient response controller when the motor model changes over from open-loop controlled operation to closed-loop controlled operation.

Note: Only for ASM and PSM in encoderless operation:

The settling range starts at 0.5 * p1755 * p1756.

For ASM, it ends at p1755 * p1756, or for p1755, if p1759 is at the maximum value.

For PSM it always ends at p1755 * p1756.

p1758[0...n] Motor model changeover delay time closed/open-loop control / MotMod t cl_op

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	100 [ms]	10000 [ms]	1000 [ms]

Description: Sets the minimum time for falling below the changeover speed when changing from closed-loop controlled operation to open-loop controlled operation.

Dependency: The wait time has no significance if the setpoint speed before the ramp-function generator lies in the open-loop speed controlled operating range. In this case, the change is made without any delay.

See also: p1755, p1756

Note: If p1758 is changed, commissioning must be selected in order to validate the value for the blocking monitoring.

p1759[0...n] Motor model changeover delay time open/closed-loop control / MotMod t op_cl

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	2000 [ms]	0 [ms]

Description: Sets the minimum time for a transition from open-loop controlled to closed-loop controlled operation after the lower changeover speed p1755 * (1 - p1756 / 100 %) has been exceeded.

Dependency: See also: p1755, p1756

Note: With p1759 = 2000 ms, the delay time becomes ineffective and the model changeover is determined by the output frequency only (changeover for p1755).

p1760[0...n] Motor model with encoder speed adaptation Kp / MotMod wE n_ada Kp

Description: Displays the absolute value of the flux of the motor model.

p1780[0...n] Motor model adaptation configuration / MotMod adpt config

VECTOR_G

Can be changed: U, T | **Calculated:** CALC_MOD_CON | **Access level:** 3
Data type: Unsigned16 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: Closed-loop control | **Unit group:** - | **Unit selection:** -
Not for motor type: REL | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0000 0000 0111 1100 bin

Description: Sets the configuration for the adaptation circuit of the motor model.

Induction motor (ASM): Rs, Rr (only for operation with encoder), Lh and offset compensation.

Permanent-magnet synchronous motor (PMSM): kT

Bit array:

Bit	Signal name	1 signal	0 signal	FD
01	Select motor model ASM Rs adaptation	Yes	No	-
02	Select motor model ASM Lh adaptation	Yes	No	-
03	Select motor model PMSM kT adaptation	Yes	No	-
04	Select motor model offset adaptation	Yes	No	-
05	Select ASM Rr adaptation (only with encoder)	Yes	No	-
06	Select pole position identification PMSM encoderless	Yes	No	-
07	Select T(valve) with Rs adaptation	Yes	No	-
08	Deselect prelim. meas. of inductance for pole position ident.	Yes	No	-
10	Filter time combination current like current ctrl integral time	Yes	No	-
11	Fast flying restart with voltage model for induction motor	Yes	No	-
12	Start PMSM sensorless with last angle	Yes	No	-
13	Fast pulsed pole position identification	Yes	No	-
14	Delay of the precontrol speed to the motor model	Yes	No	-
15	RESM Q flux model linear	Yes	No	-

Dependency: In U/f characteristic operating mode, only bit 7 and bit 11 are relevant.

For active motor model feedback (see p1784), the Lh adaptation is internally deactivated automatically.

When the power units are connected in parallel with separate, offset motor winding systems (p7003 = 2), then the compensation of the valve interlocking times should be implemented as Rs adaptation (bit 7 = 1).

Caution: For bit 11:

The selection is not enabled for dv/dt filters (see p0230).

Notice: It is only permissible to change bit 11 if the drive is switched off.

When selecting bit 11, also for U/f characteristic operation, a standstill measurement must have been performed to set the necessary current controller for a fast flying restart.

Note: ASM: Induction motor

PMSM: permanent-magnet synchronous motor

When selecting the compensation of the valve interlocking via Rs (bit 7), the compensation in the gating unit is deactivated and is instead taken into account in the motor model.

In order that the correction values of the Rs, Lh and kT adaptation (selected using bit 0 ... bit 2) are correctly accepted when changing over the drive data set, a dedicated motor number must be entered into p0826 for each different motor.

For bit 11:

This bit has no influence on flying restart with speed encoder. Depending on the motor, the fast flying restart is suitable for speeds of maximum 1.5x to 4x the rated motor speed.

For bit 12 (only for synchronous motors and bit 6 = 1):

The pole position identification is only carried out after power on and after the motor has coasted down. The switch-off speed p1226 should be as low as possible. If the power unit is switched off when the motor is stationary, then the next time that the power unit is switched on, the old angle is used as starting value. The precondition applies that while the power unit is switched off the motor does not rotate.

For bit 13:

When the bit is set, the duration of the pole position identification is shortened. As a consequence, the pole wheel angle error can be slightly greater.

p1784[0...n] Motor model feedback scaling / MotMod fdbk scal

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	1000.0 [%]	0.0 [%]

Description: Sets the scaling for model fault feedback.

Note: Feeding back the measured model fault to the model states increases the control stability and makes the motor model rugged against parameter errors.

When feedback is selected (p1784 > 0), Lh adaptation is not effective.

p1785[0...n] Motor model Lh adaptation Kp / MotMod Lh Kp

Description: Sets the integral time Tn for speed adaptation with active pulse technique for the estimation of the continuous rotor position for a synchronous reluctance motor.

p1800[0...n] Pulse frequency setpoint / Pulse freq set

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8021
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1.000 [kHz]	16.000 [kHz]	4.000 [kHz]

Description: Sets the pulse frequency for the converter.

This parameter is pre-set to the rated converter value when the drive is first commissioned.

Dependency: The pulse frequency can, depending on the current controller sampling time (p0115[0]) assume the following values:

p1800 = 1000 / (p0115[0] * 2)

or

p1800 = n * 1000 / p0115[0] with n = 1, 2, 3, ...

Example:

p0115[0] = 250 µs --> p1800 = 2, 4, 8, 12, 16 kHz

Possible setting values can be taken from r0114 (if p0009 = p0010 = 0).

Minimum pulse frequency: p1800 >= 12 * p1082 * r0313 / 60

If p0092 = 1 the sampling times p0115 and the pulse frequency p1800 are checked every time the parameters are downloaded, and reset to the initial values if necessary. This check can be deactivated by setting p0092 = 0 (making this setting does not influence isochronous PROFIBUS operation).

The pulse frequency cannot be changed when motor data identification is active (p1910).

If the pulse frequency is set asynchronously to the current controller sampling time (p1810.12), the following limit applies:

p1800 <= 1000 * 2 / p0115[0]

If wobbulation is selected (p1810.2), the pulse frequency can only be changed as part of pulse enabling to values with the following ratio:

a) p1800 <= 1000 / p0115[0] for p1811 > 0 %

b) p1800 <= 1000 * 2 / p0115[0] for p 1811 = 0 %

When the pulses are inhibited

p1800 > 1000 / p0115[0] -> p1811 = 0

p1800 > 1000 * 2 / p0115[0] -> 1810.2 = 0 and p1811 = 0

(applicable for all indices)

See also: r0110, r0111, p0112, p0113, r0114, p0115, r0193, p0230, p1817

Notice: The pulse frequency p1800 can also be asynchronously set to the current controller sampling time (0.05 kHz increment). To do this, p1810.12 must be set to 1 (secondary condition, see p1810).

Effects:

- switching over the gating unit (p1810.2).
- activating the current actual value correction (p1840.0).
- minimum pulse frequency 1000 * 0.5 / p0115[0].
- maximum pulse frequency 1000 * 2 / p0115[0].
- fluctuating deadtimes and dynamic performance in the current control loop.
- increased level of current ripple in the current display.

Note: The maximum possible pulse frequency is also determined by the power unit being used.

When the pulse frequency is increased, depending on the particular power unit, the maximum output current can be reduced (derating, refer to r0067).

When using output reactors and dv/dt filters (see p0230), the following restrictions apply:

- maximum 4 kHz
- maximum double rated pulse frequency (2.5 or 4 kHz)
- maximum rated pulse frequency for chassis converters with set property bit r0193.14

When using a sine-wave filter as output filter (p0230 = 3), then the pulse frequency cannot be set below the minimum value required for the filter.

For an external sine-wave filter (p0230 = 4), then the minimum pulse frequency is calculated as follows:

f_puls_min = 1.6 / (2 * Pi * root (p0233 * p0234 * p0235))

- p0233 in H
- p0234 in F

In this case, the pulse frequency must be a multiple of the inverse value of the current controller sampling time (p0115[0]).

If a sine-wave filter is parameterized as output filter (p0230 = 3), then the pulse frequency cannot be changed below the minimum value required for the filter.

If p1800 is changed while commissioning (p0009, p0010 > 0), then it is possible that the old value will no longer be able to be set. The reason for this is that the dynamic limits of p1800 have been changed by a parameter that was set when the drive was commissioned (e.g. p1082).

It is not possible to change the pulse frequency as long as motor data identification is selected.

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [kHz]	- [kHz]	- [kHz]

Description: Display and connector output for the actual converter switching frequency.

Index: [0] = Actual
[1] = Modulator minimum value

Note: The selected pulse frequency (p1800) may be reduced if the drive converter has an overload condition (p0290).

The following applies for vector drives (p0107):

The pulse frequency can also be reduced when changing over the modulator to an optimized pulse pattern. This is used to avoid overcontrol.

In the case of chassis power units, two-thirds of the setpoint pulse frequency is displayed in the FLB modulation range.

p1802[0...n] Modulator mode / Modulator mode

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	19	0

Description: Sets the modulator mode.

Value:
0: Automatic changeover SVM/FLB
1: Flat top modulation (FLB)
2: Space vector modulation (SVM)
3: SVM without overcontrol
4: SVM/FLB without overcontrol
5: SVM with pulse frequency reduction
6: SVM/FLB with pulse frequency reduction
7: No edge modulation up to 100 Hz
8: No edge modulation up to 60 Hz
9: Edge modulation
19: Optimized pulse pattern

Dependency: If a sine-wave filter is parameterized as output filter (p0230 = 3, 4), or if the power unit firmware is not able to calculate edge modulation (r0192.0 = 0), then only space vector modulation without overcontrol can be set as modulation type (p1802 = 3).

For permanent-magnet synchronous motors and chassis power units, the following applies:

Edge modulation or optimized pulse pattern can only be used, if p1810 bit 2 = 1 is set.

See also: r0192, p0230, p7003

Notice: If the pulse patterns are enabled with overmodulation option (p1802 < 3) or edge modulation (p1802 > 6), then the current actual value correction is automatically activated (p1840.0 = 0).

Note: When modulation modes are enabled that could lead to overmodulation (p1802 = 0, 1, 2, 5, 6), the modulation depth must be limited using p1803 (default p1803 < 100 %). The higher the overmodulation, the greater the current ripple and torque ripple.

When changing p1802[x], the values for all of the other existing indices are also changed.

p1802 = 7, 8 should be used if the drive is operated below 100 Hz or 60 Hz, and it is necessary to avoid changing over to edge modulation. Above these output frequencies, the modulation depth remains limited so that there the full output voltage of the edge modulation is not reached.

The setting p1802 = 19 is only released for chassis power units and SIMOTICS FD motors.

p1803[0...n] Maximum modulation depth / Mod_depth max

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 6723
P group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
20.0 [%]	150.0 [%]	100.0 [%]

Description: Defines the maximum modulation depth.

Note: p1803 = 100% is the overcontrol limit for space vector modulation (for an ideal drive converter without any switching delay).

If optimized pulse patterns are enabled (edge modulation), then the modulation depth is limited to below the output frequency of 28 Hz as there is no optimized pulse pattern in this range.

4: Edge modulation from 28 Hz; 19:1
5: Edge modulation from 60 Hz; 17:3
6: Edge modulation from 60 Hz; 17:1
7: Edge modulation from 100 Hz; 9:2
8: Edge modulation from 100 Hz; 9:1
9: Optimized pulse pattern

p1810 Modulator configuration / Modulator config

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 0000 0010 bin

Description: Sets the configuration for the modulator.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Avg value filter for V_lim (only for Vdc_comp in modulator)	Yes	No	-
01	DC link voltage compensation in the current control	Yes	No	-
02	Wobbulation activated	Yes	No	-
03	Current measurement oversampling selected	Yes	No	-
08	Pulse frequency reduction (speed dependent) stage 1	Yes	No	-
09	Pulse frequency reduction (speed dependent) stage 2	Yes	No	-
10	Activate pulse-locking/pulse-dropping function	Pulse-Dropping	Pulse-Locking	-
12	Pulse freq. can be asynchronously set to curr. ctrl clock cycle	Yes	No	-
13	Pulse freq. reduction before optimized pulse patterns for 500 µs	Yes	No	-
14	Deactivate maximum angular difference adaptation	Yes	No	-
15	Increase overmodulation range	Yes	No	-

Dependency: If bit 2 is set from 1 to 0, p1811 = 0 is set.

Notice: Bit 1 = 0 can only be set when the pulses are inhibited and for r0192.14 = 1.

Bit 2 can only be set to 1 subject to the following prerequisites:

- Pulse inhibit
- r0192.16 = 1
- p1800 < 2 x 1000/p0115[0]

Bit 12 can only be changed subject to the following prerequisites:

- preconditions, the same as bit 2 = 1
- p1810.3 = 0

For fast current changes, bit 15 = 1 together with p1802 = 0, 2 and p1803 > 106 % result in a significant increase in the torque ripple. As a consequence, increasing the modulation limit must be checked on an application for application basis.

Note:

For bit 00 = 0:

Voltage limitation from the minimum of the DC link voltage (lower ripple in the output current, reduced output voltage).

For bit 00 = 1:

Voltage limitation from averaged DC link voltage (higher output voltage with increased ripple in the output current).

The selection is only valid if the DC link compensation is not performed in the Control Unit (bit 1 = 0).

For bit 01 = 0:

DC link voltage compensation in the modulator.

For bit 01 = 1:

DC link voltage compensation in the current control.

For bit 02 = 0:

A gating unit that does not permit wobbulation is used.

Edge modulation is not possible for a parallel connection with a single-winding system (p7003 = 0).

Bit 02 cannot be set to 0 if bit 12 = 1.

For bit 02 = 1:

A gating unit that permits wobbulation is used.

For a wobbulation amplitude p1811 = 0, the maximum possible pulse frequency in p1800 = 2 x 1000 / p0115[0].

For a wobbulation amplitude p1811 > 0, the maximum possible pulse frequency in p1800 = 1000 / p0115[0].

If optimized pulse patterns has been activated (p1802 > 6), then a parameter save is required and switch off and switch on again. This is displayed using a message (F01040).

For bit 03 = 1:

The current actual value sensing and the determination of the valve ON times takes place with a double current controller clock cycle and phase offset.

The activation is only possible with r0192.23 = 1 and p1810.12 = 0 - and takes effect the next time the system is powered up.

For bit 08 = 1:

Above the frequency threshold r1836[0], the pulse frequency is switched to the value in p1800. Below r1836[0] (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency (see r0114).

For bit 09 = 1:

Above the frequency threshold r1836[1], the pulse frequency is increased to the next possible value. Below r1836[1] (minus the hysteresis), the pulse frequency is reduced to the next possible pulse frequency.

If bit 8 is set to 0, bit 9 is automatically reset.

For bit 10 = 0:

Pulse-locking function activated.

For bit 10 = 1:

Pulse-dropping function activated.

For bit 12 = 0:

The pulse frequency p1800 can also be synchronously set to the current controller clock cycle (see r0114).

Bit 12 can only be set from 1 to 0 if the pulse frequency p1800 is set synchronously to the current controller clock cycle. In this case, the gating unit is not switched over.

For bit 12 = 1:

The pulse frequency p1800 can also be asynchronously set to the current controller clock cycle. In this case, the effects should be observed (see p1800).

If bit 12 is set to 1, then the gating unit is automatically switched over (p1810.2 = 1). If this is not possible (see above), then bit 12 cannot be set to 1.

Bit 12 cannot be set to 1, if p1810.3 = 1 is set.

For bit 15 = 1:

For p1802 = 0, 2 and p1803 > 106 %, dynamically, a modulation depth of more than 106 % is permitted. When p1803 is increased, the dynamic modulation depth reserve p1574 should be increased so that the maximum output voltage r0071 approximately remains the same. For U/f control, the overcontrol in p1381 can be separately reduced.

p1811[0...n] Pulse frequency wobbulation amplitude / Puls wobb ampl

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [%]	20 [%]	0 [%]

Description: Sets the amplitude of the statistical wobbulation signal.
This signal is used to vary the pulse frequency to create a more pleasant sound.

Note: p1811 > 0 is possible, if the following applies:
- configuration: p1810.2 = 1 (wobbulation activated)
- pulse frequency: p1800 <= 1000 / p0115[0]
- output filter, filter type: p0230 < 3 (no sine-wave filter)

p1812 BI: Offset calibration output current measurement / Offs_cal I_outp

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 4
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source to activate/deactivate offset calibration for output current measurement.

Caution: The absence of offset calibration can have a negative effect on control properties. Offset calibration must be performed before switching on the power unit for the first time after POWER ON.

Note: Offset calibration is only performed with pulses suppressed and can take up to one second.

p1814[0...n] Vdc filter dead band for modulation switchover / Vdc filt dead band

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	12.0 [%]	0.0 [%]

Description: Sets the filter dead bandwidth for the DC link voltage signal to switch over the modulation type for optimized pulse patterns.
The parameter value refers to the rated line voltage of the power unit.

Recommendation: For power units with controlled regenerative line feedback, a value of approximately 2 % is recommended.
For all other power units, a value of approximately 8 % (as a result of the increased DC link voltage ripple under load).

p1815 Phase for PWM generation subgroup / Ph for PWM subgr

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0001 bin

Description: Sets bit 0 for recording the power unit in the subgroup for the "offset clocking".

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Recording in subgroup for offset clocking	Yes	No	-

Dependency: See also: p1818, p1819

Note: A change only becomes effective after booting.
If one of the following secondary conditions is not fulfilled, then none of the power units from the subgroup are clocked with an offset.
Secondary conditions for clocking with an offset:
- the PWM frequency (p1800[D]) of all power units in the subgroup must be the same.
- the PWM frequency (p1800[D]) must be the same in all drive data sets in the subgroup.
- the following must apply for the ratio between the PWM cycle (1/p1800[D]) and the current controller cycle (p0115[0]):
The ratio (1/p1800[D]) / (p0115[0]) must be an even integer number (2, 4, 6, ...) for all power units in the subgroup.
or
The ratio (p0115[0]) / (1/p1800[D]) must be an integer number (1, 2, 3, ...) for all power units in the subgroup.

p1816 Set phase for PWM generation manually / Set Ph for PWM

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-1	16	-1

Description: Sets manual setting and overwriting of automatically determined phase shift for "offset clocking".
For p1816 = -1, the following applies:
Automatic mode. The phase shift value is automatically determined.
For p1816 = 0 ... 16, the following applies:
Manual mode. The user should define the phase shift value as follows:
1. PWM cycle (1/p1800) > current controller cycle (p0115[0])
The power unit executes a phase shift from Tshift = current controller cycle (p0115[0]) * p1816.
2. PWM cycle (1/p1800) <= current controller clock cycle (p0115[0])
For p1816 >= 1, the power unit executes a phase shift from Tshift = PWM cycle/2.

Dependency: See also: r0116, p1800, p1819

p1817 Pulse frequency to output frequency ratio minimum / f_pulse/f_outp min

VECTOR_G

Can be changed: C2(2)	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
8.3	15.0	12.0

Description: Sets the minimum ratio between the pulse frequency and the output frequency.

Notice: If the ratio between the pulse frequency and the output frequency is reduced, then oscillations can occur in the output current that can result in significant levels of current ripple with the appropriate negative effects.

Note: When the maximum speed is changed, the pulse frequency p1800 is automatically limited to this minimum ratio. It is not permissible to reduce the pulse frequency if this would result in this ratio being undershot.

p1818 Phase for PWM generation configuration / Ph for PWM config

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	1

Description: Sets the phase shift for offset clocking.
For the first active power unit, it is specified whether clocking is to start at 0° (value = 0) or 180° (value = 1). All other active power units are clocked alternately according to the setting made here.

Dependency: See also: p1819

Note: A change only becomes effective after a POWER ON.
The parameter is not influenced by setting the factory setting.

p1819 Phase for PWM generation / Ph for PWM

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-1	16	-1

Description: Display for "offset clocking".
Depending on the particular case, the value is interpreted differently:
Case 1:
The PWM clock cycle (1/p1800[D]) is greater than the current controller clock cycle (p115[0]) and the ratio between the PWM clock cycle and the current controller clock cycle and is an integer and even multiple of it (e.g. p0115[0] = 125 µs, p1800[D] = 4 kHz, 2 kHz, 1 kHz).
The value displayed refers to:
- the phase shift in the current-controller cycles to be executed by the power unit.
Case 2:
The PWM clock cycle (1/p1800[D]) is less than or equal to the current controller clock cycle (p0115[0]) and the ratio between the current controller clock cycle and the PWM clock cycle is an integer and even multiple of it (e.g. p0115[0] = 125 µs, p1800[D] = 8 kHz, 16 kHz).
The value 1 displayed means that:
- the power unit is to apply a phase shift of 180 ° (from the PWM cycle).
A value of 0 displayed on all power units of the drive line-up means the following:
- the general conditions of the "offset clocking" (see p1815) are not fulfilled, i.e. no power unit is clocked with an offset.

Dependency: See also: r0108, p0115, p1800, p1815, p1816, p1818

Note: For reasons of compatibility, the parameter is an adjustable parameter. However, it functions solely as a display parameter. This means that factory setting -1 no longer has any significance and is only available for reasons of compatibility.

p1820[0...n] Reverse the output phase sequence / Outp_ph_seq rev

VECTOR_G

Can be changed: C2(3)	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 6732
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Sets the phase sequence reversal for the motor.
If the motor does not rotate in the required direction, then the output phase sequence can be reversed using this parameter. This means that with the same setpoint, the motor direction is reversed without reversing the encoder actual value.
When a speed encoder is being used, it may be necessary to also invert the encoder actual value (p0410).

Value:
0: OFF
1: ON

Dependency: See also: p1821

Caution: For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15.
Changing the direction using p1820 or p1821 is not recognized by the "Safe Direction without encoder". As a consequence, the limit provided by SDI (Safe Direction) from r9733 no longer functions.

Note: This setting can only be changed when the pulses are inhibited.
p1821 can be used to reverse the phase sequence and encoder actual value.

p1821[0...n] Direction of rotation / Dir of rot

VECTOR_G

Can be changed: C2(3) | **Calculated:** - | **Access level:** 3

Data type: Integer16 | **Dyn. index:** DDS, p0180 | **Function diagram:** 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732

P group: Motor | **Unit group:** - | **Unit selection:** -

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	1	0

Description: Setting to change the direction of rotation.

If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.

Value:
0: Clockwise
1: Counter-clockwise

Dependency: See also: F07434

Danger: When using external speed actual values for the speed controller (see p1440), for a direction of rotation change (p1821 = 1), then its polarity must also be changed (e.g. for drive object ENCODER via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.

Caution: For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15.

Notice: An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled.

After changing parameter p1821, the direction of rotation is not automatically adapted in the safety area. The following parameters can be used to set the direction of rotation for safety monitoring:

- p9516.1/p9316.1 "Position actual value sign change" (only for operation with encoder)
- p9539/p9339 "SI Motion gearbox direction of rotation reversal" (also in encoderless operation)

Note: For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft.

When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).

p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.

p1821[0...n] Direction of rotation / Dir of rot

VECTOR_G (n/M)

Can be changed: C2(3) | **Calculated:** - | **Access level:** 3

Data type: Integer16 | **Dyn. index:** DDS, p0180 | **Function diagram:** 4704, 4710, 4711, 4715, 5730, 6730, 6731, 6732

P group: Motor | **Unit group:** - | **Unit selection:** -

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	1	0

Description: Setting to change the direction of rotation.

If the parameter is changed, it reverses the direction of rotation of the motor and the encoder actual value without changing the setpoint.

Value:
0: Clockwise
1: Counter-clockwise

Dependency: See also: p6278

See also: F07434

Danger: When using external speed actual values for the speed controller (see p1440), for a direction of rotation change (p1821 = 1), then its polarity must also be changed (e.g. for drive object ENCODER via p0410). Otherwise, a positive coupling can occur in the speed control loop and the drive would then be accelerated up to the speed limit.

Caution: For 12-pulse converters with 30° offset angle for system 2, for a direction of rotation reversal, the phase offset changes by 60° as the sign of the angle offset changes. This can be adapted in p1810.15.

When using a separately excited synchronous machine with reverse field excitation, when setting p1821, it must be checked as to whether the phase sequence of the exciter converter must also be changed.

Notice: An appropriate fault is output for a drive data set changeover where the direction of rotation changes and the pulses are enabled.

After changing parameter p1821, the direction of rotation is not automatically adapted in the safety area. The following parameters can be used to set the direction of rotation for safety monitoring:

- p9516.1/p9316.1 "Position actual value sign change" (only for operation with encoder)
- p9539/p9339 "SI Motion gearbox direction of rotation reversal" (also in encoderless operation)

Note: For operation with the phase sequence U/V/W, the direction of rotation is defined when viewing the face side of the motor output shaft.

When changing the direction of rotation, the rotating field direction of the current controller is reversed. The speed actual value (e.g. r0063) is also reversed so that the control sense is kept and internally causing the direction of rotation to be reversed with the same setpoint. Further, the position actual values of the actual encoder are reversed (e.g. r0482[0...2]).

p1820 can be used to reverse the direction of the motor without reversing the encoder actual value.

p1822 Power unit line phases monitoring tolerance time / PU ph mon t_tol

VECTOR_G

Can be changed: T | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** -
P group: - | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
500 [ms]	540000 [ms]	1000 [ms]

Description: Sets the tolerance time for line phase monitoring for blocksize power units.

If a line phase fault is present for longer than this tolerance time, then a corresponding fault is output.

Dependency: See also: F30011

Notice: When operating with a failed line phase, depending on the active power, values higher than the default value can either immediately damage the power unit or damage it over the long term.

Note: For the setting p1822 = maximum value, line phase monitoring is deactivated.

p1825 Converter valve threshold voltage / Threshold voltage

VECTOR_G

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** -
P group: Modulation | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.0 [Vrms]	100.0 [Vrms]	0.6 [Vrms]

Description: Sets the threshold voltage drop of the valves (power semiconductor devices) to be compensated.

Note: The value is automatically calculated in the motor data identification routine.

p1828 Compensation valve lockout time phase U / Comp t_lock ph U

VECTOR_G

Can be changed: U, T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** -
P group: Modulation | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: Sets the valve lockout time to compensate for phase U.

Notice: Deadtime compensation is deactivated with p7003 = 2.

Note: The value is automatically calculated in the motor data identification routine.

For type PM340 power units, the value is limited to 3.98 µs.

p1829 Compensation valve lockout time phase V / Comp t_lock ph V

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: Sets the valve lockout time to compensate for phase V.
Notice: Deadtime compensation is deactivated with p7003 = 2.
Note: For type PM340 power units, the value is limited to 3.98 µs.

p1830 Compensation valve lockout time phase W / Comp t_lock ph W

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [µs]	1000000.00 [µs]	0.00 [µs]

Description: Sets the valve lockout time to compensate for phase W.
Notice: Deadtime compensation is deactivated with p7003 = 2.
Note: For type PM340 power units, the value is limited to 3.98 µs.

p1832 Dead time compensation current level / t_dead_comp I_lev

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [Arms]	10000.0 [Arms]	0.0 [Arms]

Description: Sets the current level for the dead time compensation.
Above the current level, the dead time - resulting from the converter switching delays - is compensated by a previously calculated constant value. If the relevant phase current setpoint falls below the absolute value defined by p1832, the corrective value for this phase is continuously reduced.
Dependency: The factory setting of p1832 is automatically set to 0.02 * rated drive converter current (r0207).

p1835[0...1] Pulse frequency reduction switchover frequency shift / f_puls_red f_swov

VECTOR_G (n/M)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Modulation	**Unit group:** -	**Unit selection:** -
	Not for motor type: SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [Hz]	800.00 [Hz]	0.00 [Hz]

Description: Frequency to shift the switchover frequency r1836 for pulse frequency reduction.
The parameter value reduces the switchover frequency threshold with the same parameter index.
Index: [0] = Frequency limit 1
[1] = Frequency limit 2
Dependency: See also: r1836

r1836[0...1] Pulse frequency reduction, switchover frequency / f_puls_red f_swov

VECTOR_G (n/M)

Can be changed: - **Calculated:** - **Access level:** 3
Data type: FloatingPoint32 **Dyn. index:** - **Function diagram:** -
P group: Modulation **Unit group:** - **Unit selection:** -
Not for motor type: SESM, REL **Scaling:** - **Expert list:** 1

Min:	Max:	Factory setting:
- [Hz]	- [Hz]	- [Hz]

Description: Displays the frequency limits, under which the pulse frequency is automatically reduced.

Starting from the parameterized pulse frequency p1800, the pulse frequency is reduced to the next possible one, if the frequency limits and an additional hysteresis are fallen below.

Index: [0] = Frequency limit 1
[1] = Frequency limit 2

Dependency: See also: p1810, p1835

Note: The pulse frequency reduction is not active for U/f control.

A minimum clearance of 10 Hz is kept between the frequency thresholds, which cannot be fallen below when changing p1835.

For index [0]:

Frequency limit for the first pulse frequence reduction (active for p1810.8 = 1).

For index [1]:

Frequency limit for the second pulse frequence reduction (active for p1810.9 = 1).

r1837 Gating unit configuration / Gating unit config

VECTOR_G

Can be changed: - **Calculated:** - **Access level:** 3

p1900 Motor data identification and rotating measurement / MotID and rot meas

VECTOR_G	**Can be changed:** C2(1), T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
	P group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	2	2

Description: Sets the motor data identification and speed controller optimization.

p1900 = 0:

Function inhibited.

p1900 = 2:

Induction motors --> set p1910 = 1 and p1960 = 0

Permanent-magnet or separately excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0

When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next switch-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.

For permanent-magnet or separately excited synchronous motors, the encoder is adjusted with the next switch-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

Value:
0: Inhibited
2: Identify motor data (stationary)

Dependency: In the simulation mode, the parameter cannot be written into.

When selecting the motor data identification routine, the drive data set changeover is suppressed.

See also: p1272, p1300, p1910

See also: F07990, A07991

Notice: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

It is not permissible to activate write protection during the motor identification (p7761).

During the rotating measurement it is not possible to save the parameters (p0971, p0977).

Note: The motor and control parameters of the vector control are only optimally set when both measurements are carried out (initially at standstill, and then with the motor rotating). The measurement with rotating motor is not performed for p1300 < 20 (U/f controls).

An appropriate alarm is output when the parameter is set.

The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it.

The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions.

p1900 is automatically set to 0 after the motor data identification routine has been completed.

For a reluctance motor, a pole position identification is carried out during the stationary measurement. As a consequence, faults that occur can also be assigned to the pole position identification.

For U/f control (p1300), identification with speed controller optimization does not make sense (e.g. p1900 = 1).

p1900 Motor data identification and rotating measurement / MotID and rot meas

VECTOR_G (n/M)

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	3	2

Description:

Sets the motor data identification and speed controller optimization.

The motor identification should first be performed with the motor stationary (p1900 = 1, 2; also refer to p1910). Based on this, additional motor and control parameters can be determined using the motor data identification with the motor rotating (p1900 = 1, 3; also refer to p1960); not for p1300 < 20.

p1900 = 0:

Function inhibited.

p1900 = 1:

Induction motors --> set p1910 = 1 and p1960 = 0, 1, 2 depending on p1300

Permanent-magnet or separately excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0, 1, 2 depending on p1300

When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next switch-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.

For permanent-magnet or separately excited synchronous motors, the encoder is adjusted with the next switch-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

With the following switch-on command, a rotating motor data identification routine is carried out - and in addition, a speed controller optimization by making measurements at different motor speeds.

p1900 = 2:

Induction motors --> set p1910 = 1 and p1960 = 0

Permanent-magnet or separately excited synchronous motors --> set p1910 = 1, p1990 = 1 and p1960 = 0

When the drive enable signals are present, a motor data identification routine is carried out at standstill with the next switch-on command. Current flows through the motor which means that it can align itself by up to a quarter of a revolution.

For permanent-magnet or separately excited synchronous motors, the encoder is adjusted with the next switch-on command. The motor must be free to rotate and rotates through 1.5 revolutions of the motor encoder.

p1900 = 3:

Sets p1960 = 0, 1, 2 depending on p1300

This setting should only be selected if the motor data identification was already carried out at standstill.

When the drive enable signals are present, with the next switch-on command, a rotating motor data identification routine is carried out - and in addition, speed controller optimization by taking measurements at different motor speeds.

Value:

0: Inhibited
1: Identify motor data (stationary), opt. speed control
2: Identify motor data (stationary)
3: Optimize speed controller (rotating)

Dependency:

In the simulation mode, the parameter cannot be written into.

When selecting the motor data identification routine, the drive data set changeover is suppressed.

See also: p1272, p1300, p1910, p1960, p1990

See also: A07980, A07981, F07982, F07983, F07984, F07985, F07986, A07987, F07988, F07990, A07991

Notice:

If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

It is not permissible to activate write protection during the motor identification (p7761).

During the rotating measurement it is not possible to save the parameters (p0971, p0977).

p1900 = 3:

This setting should only be selected if the motor data identification was already carried out at standstill.

Note: The motor and control parameters of the vector control are only optimally set when both measurements are carried out (initially at standstill, and then with the motor rotating). The measurement with rotating motor is not performed for p1300 < 20 (U/f controls).

An appropriate alarm is output when the parameter is set.

The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it.

The duration of the measurements can lie between 0.3 s and several minutes. This time is, for example, influenced by the motor size and the mechanical conditions.

p1900 is automatically set to 0 after the motor data identification routine has been completed.

For a reluctance motor, a pole position identification is carried out during the stationary measurement. As a consequence, faults that occur can also be assigned to the pole position identification.

For U/f control (p1300), identification with speed controller optimization does not make sense (e.g. p1900 = 1).

p1901 Test pulse evaluation configuration / Test puls config

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 bin

Description: Sets the configuration for the test pulse evaluation.

Bit 00: Check for conductor-to-conductor short circuit once/always when the pulses are enabled.

Bit 01: Check for ground fault once/always when the pulses are enabled.

Bit 02: Activation of the tests selected using bit 00 and/or bit 01 each time the pulses are enabled

Recommendation: If the ground fault test is incorrectly initiated because the motor is not at a complete standstill, then the pulse cancellation delay time (p1228) should be increased.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Phase short-circuit test pulse active	Yes	No	-
01	Ground fault detection test pulse active	Yes	No	-
02	Test pulse at each pulse enable	Yes	No	-

Dependency: The ground fault test is only possible when the motor is stationary, and is therefore only realized when flying restart is deactivated (p1200 = 0).

When a sine-wave filter is connected, the short-circuit and the ground fault test are deactivated, as the filter could be excited by the test pulse.

See also: p0287

Note: If a conductor-to-conductor short-circuit is detected during the test, this is displayed in r1902.1.

If a ground fault is detected during the test, this is displayed in r1902.2.

For bit 02 = 0:

If the test was successful once after POWER ON (see r1902.0), it is not repeated.

For bit 02 = 1:

The test is not only performed after POWER ON, but also each time the pulses are enabled.

r1902 Test pulse evaluation status / Test puls ev stat

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the status of the test pulse evaluation.

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	Short-circuit test successfully performed	Yes	No	-
	01	Phase short-circuit detected	Yes	No	-
	02	Ground fault test successfully performed	Yes	No	-
	03	Ground fault detected	Yes	No	-
	04	Identification pulse width greater than the minimum pulse width	Yes	No	-

Note: If the ground fault test was selected, but not successfully performed, then sufficient current was not be able to be established during the test pulses.

For bit 04:

A test pulse longer than one sampling time has occurred

p1905 Parameter tuning selection / Par tuning select

VECTOR_G (n/M)

Can be changed: C2(1), T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	90	0

Description: The fine encoder calibration should be started during the first commissioning or after the encoder is replaced.

The fine calibration starts when the pulses are enabled and performs a rotating measurement (approximately 1 minute). In this case, a setpoint speed of at least 40 % of the motor rated speed must be entered, and the torque must be less than half of the motor rated torque.

The phases of the fine calibration of displayed using alarm A07976.

The fine calibration ends with the calculation of p0431 for the following pulse inhibit.

p1905 is automatically set to 0 at the end of the fine calibration.

Value:
0: Inactive
90: Fine encoder calibration

Dependency: If the motor encoder adjustment has not been performed (p3925.4 = 0) or the encoder calibration is activated (p1990 != 0), then encoder fine calibration is prevented.

See also: p1272, p1910, p1960, p1990

See also: A07976

Notice: During encoder fine calibration, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.

Note: For p1905 = 90 and with the pulses not enabled, the function is only executed the next time that the pulses are enabled.

When selecting the encoder fine calibration, the changeover of the motor data sets is suppressed.

p1909[0...n] Motor data identification control word / MotID STW

Description: Sets the configuration for the motor data identification.

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	Stator inductance estimate no measurement	Yes	No	-
	01	Cl.-loop current control w/ dead-beat controller	Yes	No	-
	02	Rotor time constant estimate no measurement	Yes	No	-
	03	Leakage inductance estimate no measurement	Yes	No	-
	04	Activates the identification dynamic leakage inductance	Yes	No	-
	05	Determine Tr and Lsig evaluation in the time range	Yes	No	-
	06	Activate vibration damping	Yes	No	-
	07	Deactivate vibration detection	Yes	No	-
	11	Deactivate pulse measurement Lq Ld	Yes	No	-
	12	Deactivate rotor resistance Rr measurement	Yes	No	-
	14	Deactivate valve interlocking time measurement	Yes	No	-
	15	Determine only stator resistance, valve voltage fault, dead time	Yes	No	-
	16	Short motor identification (lower quality)	Yes	No	-
	17	Measurement without control parameter calculation	Yes	No	-
	20	Estimate cable resistance	Yes	No	-
	22	Only identify circle	Yes	No	-
	23	Deactivate circle identification	Yes	No	-
	24	Circle identification with 0 and 90 degrees	Yes	No	-
	25	Deactivate gating unit switchover	Yes	No	-

Note: For bit 20 = 1 (only for p0352 = 0 Ohm):

For motors with code number (with the exception of 1LE1, 1PE5, 1PC1), the cable resistance p0352 is calculated from the difference between the measurement results of the overall stator resistance and the stator resistance listed in the motor data sheet.

For all other motors, the stator resistance from the automatic calculation is used instead of that from the motor data sheet.

The following applies to permanent-magnet synchronous motors:

Bit 11 = 0 and "Closed-loop control" operating mode:

The direct inductance Ld and the quadrature inductance Lq are measured at a low current.

Bit 11 = 1 or "U/f" operating mode:

The stator inductance is measured with half the rated motor current.

If the stator is inductance is not measured but is to be estimated, then bit 0 should be set and bit 11 should be deselected.

p1910 Motor data identification selection / MotID selection

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	28	1

Description: Sets the motor data identification routine.

The motor data identification routine is carried out after the next switch-on command.

p1910 = 1:

All motor data and the drive converter characteristics are identified and then transferred to the following parameters:

p0350, p0354, p0356, p0357, p0358, p0360, p1825, p1828, p1829, p1830

After this, the control parameter p0340 = 3 is automatically calculated.

Value:
0: Inhibited
1: Complete identification (ID) and acceptance of motor data
2: Complete identification (ID) of motor data without acceptance
3: ID of the saturation characteristic and acceptance
4: ID of the saturation characteristic without acceptance
5: ID of dynamic leakage inductance Lsig (r1920) without acceptance
6: ID of lockout time (r1926) without acceptance
7: ID of stator resistance Rs (r1912) without acceptance
8: ID of stator inductance Ls (r1915) Rr (r1927) without acceptance
9: ID of rotor time constant Tr (r1913) without acceptance
10: ID of static leakage inductance Lsig (r1914) without acceptance
20: Voltage vector input
21: Voltage vector input without filter
22: Rectangular voltage vector input without filter
23: Triangular voltage vector input without filter
24: Rectangular voltage vector input with filter
25: Triangular voltage vector input with filter
26: Enter voltage vector with DTC correction
27: Enter voltage vector with AVC
28: Enter voltage vector with DTC + AVC correction

Dependency:
"Quick commissioning" must be carried out (p0010 = 1, concluded with p3900 > 0) before executing the motor data identification routine!

In the simulation mode, the parameter cannot be written into. When selecting the motor data identification routine, the drive data set changeover is suppressed.

When the sine-wave filter is connected, p1909.15 must be activated as only the stator resistance can be measured.

See also: p1272, p1900

See also: F07990, A07991

Notice:
After the motor data identification (p1910 > 0) has been selected, alarm A07991 is output and a motor data identification routine is carried out as follows at the next switch-on command:

- current flows through the motor and a voltage is present at the drive converter output terminals.

- during the identification routine, the motor shaft can rotate through a maximum of half a revolution.

- however, no torque is generated.

Note:
If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

When setting p1910, the following should be observed:

1. "With acceptance" means:

The parameters specified in the description are overwritten with the identified values and therefore have an influence on the controller setting.

2. "Without acceptance" means:

The identified parameters are only displayed in the range r1912 ... r1926. The controller settings remain unchanged.

3. p1910 = 3, 4, 5 can only be selected for induction motors.

4. For settings 27 and 28, the AVC configuration set using p1840 is active.

The switch-on command must remain set during a measurement and after the measurement has been completed, the drive automatically resets it. The duration of the measurements can lie between 0.3 s and several minutes. This time is mainly influenced by the motor size. p1910 is automatically set = 0 after the motor data identification routine has been completed. If only the stationary measurement is selected, then p1900 is also reset to 0. Otherwise, the rotating measurement is activated.

Note: The Lq characteristic consists of the value pairs from r1934 and r1935 with the same index.

p1959[0...n] Rotating measurement configuration / Rot meas config

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0000 0000 0001 1111 bin

Description: Sets the configuration of the rotating measurement.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Encoder test active	Yes	No	-
01	Saturation characteristic identification	Yes	No	-
02	Moment of inertia identification	Yes	No	-
03	Re-calculates the speed controller parameters	Yes	No	-
04	Speed controller optimization (vibration test)	Yes	No	-
05	q leakage inductance ident. (for current controller adaptation)	Yes	No	-
11	Do not change the controller parameters during the measurement	Yes	No	-
12	Measurement shortened	Yes	No	-
13	After measurement direct transition into operation	Yes	No	-
14	Calculate speed actual value smoothing time	Yes	No	-

Dependency: See also: F07988

Note: The encoder is only tested if the rotating measurement with encoder is selected (p1960 = 2).

The following parameters are influenced for the individual optimization steps:

Bit 00: None

Bit 01: p0320, p0360, p0362 ... p0369

Bit 02: p0341, p0342

Bit 03: p1400.0, p1458, p1459, p1460, p1462, p1463, p1470, p1472, p1496

Bit 04: Dependent on p1960

Bit 05: p0391, p0392, p0393, p1402.2 only for induction motors

p1960 = 1, 3: p1458, p1459, p1470, p1472, p1496, p1400.0

p1960 = 2, 4: p1458, p1459, p1460, p1462, p1496, p1461, p1463

The identification of the q leakage inductance can only be carried out for unloaded motors or motors with a low load (load approx. 30% below the rated motor torque). Only then is a current controller adaptation (p0391 ... p0393) parameterized if the q-leakage inductance under no-load conditions is at least 30 % higher than the total leakage inductance (p0356, p0358).

For bit 11 = 1:

Bits 02, 03, 04 no longer have any effect. It makes sense to set bit 11 if the speed controller and its adaptation were already set before the measurement.

For bit 12 = 1:

The selection only has an effect on the measurement p1960 = 1, 2. For the shortened measurement, the magnetizing current and moment of inertia are determined with a somewhat lower accuracy.

For bit 13 = 1:

After the measurement has been completed, the system immediately goes into closed-loop speed controlled operation.

p1960 Rotating measurement selection / Rot meas sel

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	4	0

Description: Sets the rotating measurement.

The rotating measurement is carried out after the next switch-on command.

The setting possibilities of the parameter depend on the open-loop/closed-loop control mode (p1300).

p1300 < 20 (U/f open-loop control):

It is not possible to select rotating measurement or speed controller optimization.

p1300 = 20, 22 (encoderless operation):

Only rotating measurement or speed controller optimization can be selected in the encoderless mode.

p1300 = 21, 23 (operation with encoder):

Both versions (encoderless and with encoder) of the rotating measurement and speed controller optimization can be selected.

Value:
0: Inhibited
1: Rotating measurement in encoderless operation
2: Rotating measurement with encoder
3: Speed controller optimization in encoderless operation
4: Speed controller optimization with encoder

Dependency: Before the rotating measurement is carried out, the motor data identification routine (p1900, p1910, r3925) should have already been done.

In the simulation mode, a value of 1 cannot be written into the parameter.

When selecting the rotating measurement, the drive data set changeover is suppressed.

When selecting rotating measurement (with the exception for p1959.13 = 1) the following BICO parameters are set to standard values, and after the measurement has been completed, are reset back to the original parameter assignments:

p1020 ... p1023, p1070, p1075, p1138, p1139, p1140 ... p1143, p1155, p1160, p1437, p1476, p1477

See also: p1272, p1300, p1900, p1959, p1967, r1968

See also: A07987

Danger:

For drives with a mechanical system that limits the distance moved, it must be ensured that this is not reached during the rotating measurement. If this is not the case, then it is not permissible that the measurement is carried out.

Notice: If there is a motor holding brake, it must be open (p1215 = 2).

To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

During the rotating measurement it is not possible to save the parameters (p0971, p0977).

Note: When the rotating measurement is activated, it is not possible to save the parameters (p0971, p0977).

Parameter changes are automatically made for the rotating measurement (e.g. p1120); this is the reason that up to the end of the measurement, and if no faults are present, no manual changes should be made.

The ramp-up and ramp-down times (p1120, p1121) are limited, for the rotating measurement, to 900 s.

For speed controller optimization with encoder (p1960 = 2, 4), the speed controller for encoderless operation is also pre-assigned (p1470, p1472).

Depending on whether the speed controller optimization is carried out with or without encoder, different Kp/Tn adaptations of the speed controller are set (p1464, p1465). If the drive should be controlled with as well as without speed encoder, then we recommend the use of two drive data sets (p0180). These can then be executed with different speed controller adaptations.

p1961 Saturation characteristic speed to determine / Sat_char n determ

VECTOR_G (n/M)

[4] = Value 5

Dependency: See also: r0382

r1964[0...4] Saturation characteristic rotor flux / Sat_char rot flux

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: Displays the rotor flux values of the identified saturation characteristic.
After they have been determined, the values are transferred to p0362 ... p0365.

Index: [0] = Value 1
[1] = Value 2
[2] = Value 3
[3] = Value 4
[4] = Value 5

p1965 Speed_ctrl_opt speed / n_opt speed

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
10 [%]	75 [%]	40 [%]

Description: Sets the speed for the identification of the moment of inertia and the vibration test.
Induction motor:
The percentage value is referred to p0310 (rated motor frequency).
Synchronous motor:
The percentage value is referred to the minimum from p0310 (rated motor frequency) and p1082 (maximum speed).

Dependency: See also: p0310, p1959
See also: F07984, F07985

Note: In order to calculate the inertia, sudden speed changes are carried out - the specified value corresponds to the lower speed setpoint. This value is increased by 20 % for the upper speed value.
The q leakage inductance (refer to p1959.5) is determined at zero speed and at 50 % of p1965 - however, with a maximum output frequency of 15 Hz and at a minimum of 10% of the rated motor speed.

p1967 Speed_ctrl_opt dynamic factor / n_opt dyn_factor

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1 [%]	400 [%]	100 [%]

Description: Sets the dynamic response factor for speed controller optimization.
After optimization, the dynamic response achieved is displayed in r1968.

Dependency: See also: p1959, r1968
See also: F07985

Note: For a rotating measurement, this parameter can be used to optimize the speed controller.
p1967 = 100 % --> speed controller optimization according to a symmetric optimum.
p1967 > 100 % --> optimization with a higher dynamic response (Kp higher, Tn lower).
If the actual dynamic response (see r1968) is significantly reduced with respect to the required dynamic response (p1967), then this can be as a result of mechanical load oscillations. If, in spite of this load behavior, a higher dynamic response is required, then the oscillation test (p1959.4 = 0) should be deactivated and the measurement repeated.

r1968 Speed_ctrl_opt dynamic factor actual / n_opt dyn_fact act

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: Displays the dynamic factor which is actually achieved for the vibration test

Dependency: See also: p1959, p1967
See also: F07985

Note: This dynamic factor only refers to the control mode of the speed controller set in p1960.

r1969 Speed_ctrl_opt moment of inertia determined / n_opt m_inert det

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** 25_1	**Unit selection:** p0100
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [kgm²]	- [kgm²]	- [kgm²]

Description: Displays the determined moment of inertia of the drive.
After it has been determined, the value is transferred to p0341, p0342.

Dependency: IEC drives (p0100 = 0): unit kg m^2
NEMA drives (p0100 = 1): unit lb ft^2
See also: p0341, p0342, p1959
See also: F07984

r1970[0...1] Speed_ctrl_opt vibration test vibration frequency determined / n_opt f_vib det

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the vibration frequencies determined by the vibration test.

Index: [0] = Frequency low
[1] = Frequency high
Dependency: See also: p1959
See also: F07985

r1971[0...1] Speed_ctrl_opt vibration test standard deviation determined / n_opt std_dev det

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Hz]	- [Hz]	- [Hz]

Description: Displays the standard deviations of the vibration frequencies determined by the vibration test
Index: [0] = Standard deviation of low frequency
[1] = Standard deviation of high frequency
Dependency: See also: p1959
See also: F07985

r1972[0...1] Speed_ctrl_opt vibration test number of periods determined / n_opt per_qty det

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the period number determined by the vibration test.
Index: [0] = No. of periods of the low frequency
[1] = No. of periods of the high frequency
Dependency: See also: p1959
See also: F07985

r1973 Rotating measurement encoder test pulse number determined / n_opt puls no det

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the number of pulses determined during the vibration test.
Note: A negative signal indicates an incorrect polarity of the encoder signal.

p1974 Speed_ctrl_opt saturation characteristic rotor flux maximum / n_opt rot_fl max

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
104 [%]	120 [%]	120 [%]

Description: Sets the maximum flux setpoint to measure the saturation characteristic.

r1979.0...12 BO: Speed_ctrl_opt status / n_opt status

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
	P group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the status to check and monitor the states of speed controller optimization.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Speed controller optimization activated	Yes	No	-
01	Speed controller optimization completed	Yes	No	-
02	Speed controller optimization interrupted	Yes	No	-
04	Encoder test active	Yes	No	-
05	Saturation characteristic identification active	Yes	No	-
06	Moment of inertia identification active	Yes	No	-
07	Recalculate speed controller parameters active	Yes	No	-
08	Speed controller vibration test active	Yes	No	-
09	Magnetizing inductance adapt. active	Yes	No	-
10	Operation with encoder after encoderless operation	Yes	No	-
11	q-leakage inductance identification	Yes	No	-
12	Moment of inertia estimator inhibited	Yes	No	-

p1980[0...n] PolID technique / PolID technique

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1	12	4

Description: Sets the pole position identification technique.

The current magnitudes are limited to the rated power unit values.

p1980 = 1, 8:

The current magnitude is set using p0329.

p1980 = 4, 6:

The current magnitude of the first measurement section is set using p0325, the second using p0329.

p1980 = 10:

The rated motor current is impressed to align.

p1980 = 12:

The induced stator voltage is sensed using a VSM and evaluated. This rotor position identification technique can only be used for separately excited synchronous motors with incremental encoder.

Value:

1: Voltage pulsing 1st harmonics
4: Voltage pulsing 2-stage
6: Voltage pulsing 2-stage inverse
8: Voltage pulsing 2nd harmonic inverse
10: DC current injection
12: Rotor position sensing VSM for SESM with incremental encoder

Dependency: When commissioning a catalog motor, the technique is automatically selected depending on the motor type being used.

In the simulation mode, the parameter cannot be written into.

See also: p0325, p0329, p1272, p1780

See also: F07969

Note: For p1980 = 1, 4, 6, 8:
Voltage pulse technique cannot be applied to separately excited synchronous motors (p0300 = 5) and for operation with sine-wave output filters (p0230).
For p1980 = 12:
This technique can only be applied for separately excited synchronous motors (SESM) with voltage measurement (VSM).
The rotor position identification technique (p1980 = 12) cannot be used for permanent-magnet synchronous motors.

p1982[0...n] PolID selection / PolID selection

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** MDS, p0130	**Function diagram:** -
	P group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	2	0

Description: Activates the pole position identification routine to determine the commutation angle and to carry out a plausibility check.

Value:
0: Pole position identification off
1: Pole position identification for commutation
2: Pole position identification for plausibility check

Recommendation: For p1982 = 1:
This is used for synchronous motors with motor encoder without absolute data.
The information/data regarding the absolute commutation angle is supplied via a track C/D, Hall sensors, an absolute encoder or from the pole position identification routine.
For separately excited synchronous motors, the position identification is realized using the voltage measurement of a Voltage Sensing Module VSM (p1980 = 12). If there is no VSM then the setting is not possible.
For p1982 = 2:
This is used for synchronous motor with motor encoder with absolute data to check this data.
With p1982 = 2, each time the pulses are enabled it is checked whether the absolute position supplied from the encoder does not exceed a deviation of 45 degrees to the identified pole wheel position.
Not possible for separately excited synchronous motors.

Dependency: See also: p0325, p0329, p1980, r1984, r1985, r1987, p1990

Note: For encoderless operation, the pole position identification routine is selected with p1780.6

r1984 PolID angular difference / PolID ang diff

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [°]	- [°]	- [°]

Description: Displays the angular difference between the actual electrical commutation angle and the angle determined by the pole position identification.

Dependency: See also: p0325, p0329, p1980, p1982, r1985, r1987, p1990

Note: PolID: Pole position identification
When the pole position identification routine is executed several times using p1983, the spread of the measured values can be determined using this value. At the same position, the spread should be less than 2 degrees electrical.

r1985 PolID saturation curve / PolID sat_char

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Arms]	- [Arms]	- [Arms]

Description: Displays the saturation curve of the pole position identification (saturation technique).
Displays the current characteristic of the pole position identification routine (elasticity technique).

Dependency: See also: p0325, p0329, p1980, p1982, r1984, r1987, p1990

Note: PolID: Pole position identification
Regarding the saturation technique:
The values for the characteristic of the last saturation-based pole position identification routine are output every 1 ms in order to record signals (e.g. trace).

r1987 PolID trigger characteristic / PolID trig_char

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [%]	- [%]	- [%]

Description: Displays the trigger characteristic of the pole position identification routine.
The values for the characteristic of the last pole position identification routine are output every 1 ms in order to record signals (e.g. trace).
The values for trigger characteristic and saturation characteristic are always output in synchronism from a time perspective.

Dependency: See also: p0325, p0329, p1980, p1982, r1984, r1985, p1990

Note: PolID: Pole position identification
The following information and data can be taken from the trigger characteristic.
- the value -100% marks the angle at the start of the measurement.
- the value +100 % marks the commutation angle determined from the pole position identification routine.

p1990 Encoder adjustment determine angular commutation offset / Enc_adj det ang

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
	P group: Motor identification	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	3	0

Description: This function is only required for synchronous motors and can be started when commissioning for the first time or after replacing an encoder.
The function acts on the active motor data set.
Alarm A07971 is output while the angular commutation offset is being determined.
p1990 is automatically set to 0 after the angular commutation offset has been determined.
For p1990 = 1 (encoder adjustment with transfer), the following applies:
The angular commutation offset is determined and transferred into p0431.
For p1990 = 2 (encoder adjustment for checking), the following applies:
The angular commutation offset is determined and is not transferred into p0431. For a deviation of more than 6 ° electrical, fault F07413 is output.
For p1990 = 3 (encoder adjustment in operation), the following applies:
PolID procedure runs before the zero mark detection. The angular commutation offset is determined and transferred into p0431. A fine adjustment (p1905) is then optionally possible.

Value:
0: Deactivated
1: Activated with transfer
2: Activated for checking
3: Activates encoder adjustment in operation

Dependency: In the simulation mode, the parameter cannot be written into.
When selecting the encoder adjustment, the changeover of the drive data sets is suppressed.
Encoder adjustment is only carried out if the function module for "speed/torque control" is activated (r0108.2 = 1).
See also: p0325, p0329, p0431, p1272, p1900

Caution: When the encoder is being adjusted, the motor must be operated without a load - and if a motor holding brake is being used, this must be opened.

p1991[0...n] Motor changeover angular commutation correction / Ang_com corr

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-180 [°]	180 [°]	0 [°]

Description: Sets the angle that is added to the commutating angle.

Caution: If the angular correction is not correctly set, when changing over and with closed-loop torque control, the motor can accelerate to high speeds in spite of the fact that a setpoint of zero has been entered.

p1998[0...n] PolID circle center point / PolID circ center

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** CALC_MOD_CON	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0000 [A]	10000.0000 [A]	0.0000 [A]

Description: Determined current offset to determine the speed (RESM).

Dependency: See also: p1980, p1982, r1984, r1985, r1987, p1990

Note: RESM: reluctance synchronous motor (synchronous reluctance motor)

p1999[0...n] Ang. commutation offset calibr. and PolID scaling / Com_ang_offs scal

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
10 [%]	5000 [%]	100 [%]

Description: Sets the scaling for the runtime of the automatic encoder calibration and of the pole position identification technique in which the current is injected.

Dependency: See also: p0341, p0342

Caution: For p1999 > 100 % (setting large moments of inertia) the following applies:
There is no locked rotor monitoring (F07970 fault value 2).
The plausibility check of the encoder signal (F07970 fault value 4) only checks the sign.

Note: For high moments of inertia, it is practical to scale the runtime of the calibration higher.

p2000 Reference speed reference frequency / n_ref f_ref

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
6.00 [rpm]	210000.00 [rpm]	3000.00 [rpm]

Description: Sets the reference quantity for speed and frequency.
All speeds or frequencies specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
The following applies: Reference frequency (in Hz) = reference speed (in ((rpm) / 60) x pole pair number)

Dependency: See also: p2001, p2002, p2003, r2004

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.
If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
Example 1:
The signal of an analog input (e.g. r4055[0]) is connected to a speed setpoint (e.g. p1070[0]). The actual percentage input value is cyclically converted into the absolute speed setpoint using the reference speed (p2000).
Example 2:
The setpoint from PROFIBUS (r2050[1]) is connected to a speed setpoint (e.g. p1070[0]). The actual input value is cyclically converted into a percentage value via the pre-specified scaling 4000 hex. This percentage value is converted to the absolute speed setpoint via reference speed (p2000).

p2000 Reference frequency / f_ref

B_INF

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.10 [Hz]	1000.00 [Hz]	50.00 [Hz]

Description: Sets the reference quantity for the frequency.
All frequencies specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
The following applies: Reference frequency (in Hz)

p2000 Reference speed reference frequency / n_ref f_ref

ENC

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
6.00 [rpm]	210000.00 [rpm]	3000.00 [rpm]

Description: Sets the reference quantity for speed and frequency.
All speeds or frequencies specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

p2000 Reference velocity reference frequency / v_ref f_ref

ENC (Lin_enc)

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 2
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** -
P group: Communications | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.60 [m/min]	600.00 [m/min]	120.00 [m/min]

Description: Sets the reference quantity for velocity and frequency.
All velocities or frequencies specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
The following applies: Reference frequency (in Hz) = reference velocity (in (m/min) / 60)

Note: If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

p2001 Reference voltage / Reference voltage

VECTOR_G, B_INF

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** -
P group: Communications | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
10 [Vrms]	100000 [Vrms]	1000 [Vrms]

Description: Sets the reference quantity for voltages.
All voltages specified as relative value are referred to this reference quantity. This also applies for direct voltage values (= rms value) like the DC link voltage.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
Note:
This reference quantity also applies to direct voltage values. It is not interpreted as rms value, but as DC voltage value.

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.
If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
For infeed units, the parameterized device supply voltage (p0210) is pre-assigned as the reference quantity.
Example:
The actual value of the DC link voltage (r0070) is connected to a test socket (e.g. p0771[0]). The actual voltage value is cyclically converted into a percentage of the reference voltage (p2001) and output according to the parameterized scaling.

p2002 Reference current / I_ref

VECTOR_G, B_INF

Can be changed: T | **Calculated:** CALC_MOD_ALL | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** - | **Function diagram:** -
P group: Communications | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.10 [Arms]	100000.00 [Arms]	100.00 [Arms]

Description: Sets the reference quantity for currents.
All currents specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Notice: If various DDS are used with different motor data, then the reference quantities remain the same as these are not changed over with the DDS. The resulting conversion factor should be taken into account (e.g. for trace records).

Example:

p2002 = 100 A

Reference quantity 100 A corresponds to 100 %

p0305[0] = 100 A

Rated motor current 100 A for MDS0 in DDS0 --> 100 % corresponds to 100 % of the rated motor current

p0305[1] = 50 A

Rated motor current 50 A for MDS1 in DDS1 --> 100 % corresponds to 200 % of the rated motor current

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

SERVO:

Pre-assigned value for p0338 > 0.001 is p0338, otherwise 2 * p0305.

VECTOR:

Pre-assigned value is p0640.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

For infeed units, the rated line current, which is obtained from the rated power and parameterized rated line voltage (p2002 = r0206 / p0210 / 1.73) is pre-assigned as the reference quantity.

Example:

The actual value of a phase current (r0069[0]) is connected to a test socket (e.g. p0771[0]). The current actual value is cyclically converted into a percentage of the reference current (p2002) and output according to the parameterized scaling.

p2003 Reference torque / M_ref

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** 7_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.01 [Nm]	20000000.00 [Nm]	1.00 [Nm]

Description: Sets the reference quantity for torque.

All torques specified as relative value are referred to this reference quantity.

The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.

SERVO:

Pre-assigned value for p0338 and p0334 > 0.001 is p0338 * p0334, otherwise 2 * p0333.

VECTOR:

Pre-assigned value is 2 * p0333.

If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

Example:

The actual value of the total torque (r0079) is connected to a test socket (e.g. p0771[0]). The actual torque is cyclically converted into a percentage of the reference torque (p2003) and output according to the parameterized scaling.

r2004 Reference power / P_ref

VECTOR_G, B_INF

Can be changed: -
Data type: FloatingPoint32
P group: Communications
Not for motor type: -
Min:
- [kW]

Calculated: -
Dyn. index: -
Unit group: 14_10
Scaling: -
Max:
- [kW]

Access level: 3
Function diagram: -
Unit selection: p0505
Expert list: 1
Factory setting:
- [kW]

Description:
Displays the reference quantity for power.
All power ratings specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Dependency:
This value is calculated as follows:
Infeed: Calculated from voltage times current.
Closed-loop control: Calculated from torque times speed.
See also: p2000, p2001, p2002, p2003

Note:
If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
The reference power is calculated as follows:
- 2 * Pi * reference speed / 60 * reference torque (motor)
- reference voltage * reference current * root(3) (infeed)

p2005 Reference angle / Reference angle

VECTOR_G, B_INF

Can be changed: T
Data type: FloatingPoint32
P group: Communications
Not for motor type: -
Min:
90.00 [°]

Calculated: CALC_MOD_ALL
Dyn. index: -
Unit group: -
Scaling: -
Max:
180.00 [°]

Access level: 3
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting:
90.00 [°]

Description:
Sets the reference quantity for angle.
All angles specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note:
For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1.
If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.

p2006 Reference temperature / Ref temp

VECTOR_G, B_INF

Can be changed: T
Data type: FloatingPoint32
P group: Communications
Not for motor type: -
Min:
50.00 [°C]

Calculated: CALC_MOD_ALL
Dyn. index: -
Unit group: 21_1
Scaling: -
Max:
300.00 [°C]

Access level: 3
Function diagram: -
Unit selection: p0505
Expert list: 1
Factory setting:
100.00 [°C]

Description:
Sets the reference quantity for temperature.
All temperatures specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

p2006 Reference temperature / Ref temp

TM31, TM120, TM150

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
50.00 [°C]	300.00 [°C]	100.00 [°C]

Description: Sets the reference quantity for temperature.
All temperatures specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

p2007 Reference acceleration / a_ref

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.01 [rev/s²]	500000.00 [rev/s²]	0.01 [rev/s²]

Description: Sets the reference quantity for acceleration rates.
All acceleration rates specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).

Note: For the automatic calculation (p0340 = 1, p3900 > 0) an appropriate pre-assignment is only made if the parameter is not inhibited from being overwritten using p0573 = 1. If a BICO interconnection is established between different physical quantities, then the particular reference quantities are used as internal conversion factor.
The reference acceleration is calculated as follows:
Reference speed (p2000) converted from 1/min to 1/s divided by 1 s
--> p2007 = p2000 [rpm] / (60 [s/min] * 1 [s])

r2019[0...7] Comm IF error statistics / Comm err

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the receive errors at the commissioning interface (RS232).

Index:
[0] = Number of error-free telegrams
[1] = Number of rejected telegrams
[2] = Number of framing errors
[3] = Number of overrun errors
[4] = Number of parity errors
[5] = Number of starting character errors
[6] = Number of checksum errors
[7] = Number of length errors

p2020 Field bus interface baud rate / Field bus baud

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
4	13	8

Description: Sets the baud rate for the fieldbus interface USS.

Value:
4: 2400 baud
5: 4800 baud
6: 9600 baud
7: 19200 baud
8: 38400 baud
9: 57600 baud
10: 76800 baud
11: 93750 baud
12: 115200 baud
13: 187500 baud

Note: Fieldbus IF: Fieldbus interface
Changes only become effective after POWER ON.
The parameter is not influenced by setting the factory setting.
The parameter is set to the factory setting when the protocol is reselected.

p2021 Field bus interface address / Field bus address

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	31	0

Description: Displays or sets the address for the fieldbus interface USS.
The address can be set as follows:
1) Using the address switch on the Control Unit.
--> p2021 displays the address setting.
--> A change only becomes effective after a POWER ON.
2) Using p2021
--> Only if an address of 0 or an address that is invalid for the fieldbus selected in p2030 has been set using the address switch.
--> The address is saved in a non-volatile fashion using the function "copy from RAM to ROM".
--> A change only becomes effective after a POWER ON.

Dependency: See also: p2030

Note: Changes only become effective after POWER ON.
The parameter is not influenced by setting the factory setting.
The parameter is set to the factory setting when the protocol is reselected.

p2022 Field bus int USS PZD no. / Field bus USS PZD

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	16	2

Description: Sets the number of 16-bit words in the PZD part of the USS telegram for the field bus interface.

Dependency: See also: p2030

Note: The parameter is not influenced by setting the factory setting.

p2023 Field bus interface USS PKW count / Field bus USS PKW

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	127	127

Description: Sets the number of 16-bit words in the PKW part of the USS telegram for the field bus interface.

Value:
0: PKW 0 words
3: PKW 3 words
4: PKW 4 words
127: PKW variable

Dependency: See also: p2030

Note: The parameter is not influenced by setting the factory setting.

p2024[0...2] Fieldbus interface times / Fieldbus times

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	10000 [ms]	[0] 1000 [ms] [1] 0 [ms] [2] 0 [ms]

Description: Sets the time values for the fieldbus interface.
For Modbus the following applies:
p2024[0, 1]: Not relevant.
p2024[2]: Telegram pause time (pause time between two telegrams).

Index:
[0] = Max. processing time
[1] = Character delay time
[2] = Telegram pause time

Dependency: See also: p2020, p2030

Note: For p2024[2] (Modbus):
If the field bus baud rate is changed (p2020), the default time setting is restored.
The default setting corresponds to a time of 3.5 characters (dependent on the baud rate that has been set).

r2029[0...7] Field bus interface error statistics / Field bus error

CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the receive errors on the field bus interface (USS).

Index:
[0] = Number of error-free telegrams
[1] = Number of rejected telegrams
[2] = Number of framing errors
[3] = Number of overrun errors
[4] = Number of parity errors
[5] = Number of starting character errors
[6] = Number of checksum errors
[7] = Number of length errors

p2030 Field bus interface protocol selection / Field bus protocol

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
3	6	3

Description: Sets the communication protocol for the field bus interface.

Value:
3: PROFIBUS
6: USS (X140)

Note: Changes only become effective after POWER ON.
The parameter is not influenced by setting the factory setting.

p2030 Field bus interface protocol selection / Field bus protocol

CU_G130_PN, CU_G150_PN

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
7	13	7

Description: Sets the communication protocol for the field bus interface.

Value:
7: PROFINET
10: EtherNet/IP
13: Modbus TCP

Note: Changes only become effective after POWER ON.
The parameter is not influenced by setting the factory setting.

r2032 Master control control word effective / PcCtrl STW eff

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2

P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the effective control word 1 (STW1) of the drive for the master control.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	ON/OFF1	Yes	No	-
01	OC / OFF2	Yes	No	-
02	OC / OFF3	Yes	No	-
03	Enable operation	Yes	No	-
04	Enable ramp-function generator	Yes	No	-
05	Start ramp-function generator	Yes	No	-
06	Enable speed setpoint	Yes	No	-
07	Acknowledge fault	Yes	No	-
08	Jog bit 0	Yes	No	3030
09	Jog bit 1	Yes	No	3030
10	Master control by PLC	Yes	No	-

Notice: The master control only influences control word 1 and speed setpoint 1. Other control word/setpoints can be transferred from another automation device.

Note: OC: Operating condition

r2032 Master control control word effective / PcCtrl STW eff

B_INF

Can be changed: -
Data type: Unsigned16
P group: Displays, signals
Not for motor type: -
Min:
-
Calculated: -
Dyn. index: -
Unit group: -
Scaling: -
Max:
-
Access level: 2
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting:
-

Description: Displays the effective control word 1 (STW1) of the drive for the master control.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	ON/OFF1	Yes	No	-
01	OC / OFF2	Yes	No	-
03	Enable operation	Yes	No	-
07	Acknowledge fault	Yes	No	-
10	Master control by PLC	Yes	No	-

Notice: The master control only influences control word 1 and speed setpoint 1. Other control word/setpoints can be transferred from another automation device.

Note: OC: Operating condition

p2035 Fieldbus interface USS PIV drive object number / Fieldbus USS DO_no

CU_G130_DP, CU_G150_DP

Can be changed: U, T
Data type: Integer16
P group: Communications
Not for motor type: -
Min:
1
Calculated: -
Dyn. index: -
Unit group: -
Scaling: -
Max:
62
Access level: 2
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting:
2

Description: Sets the drive object number for communication via the field bus interface (USS).

Dependency: See also: p0978

Note: p2035 defines the destination for USS parameter requests (PIV).
p0978[0] defines the destination for USS process data (PZD).
The parameter is available globally on all drive objects.
The parameter is not influenced by setting the factory setting.

p2037 IF1 PROFIdrive STW1.10 = 0 mode / IF1 PD STW1.10=0

VECTOR_G, B_INF, ENC

Can be changed: T
Data type: Integer16
P group: Communications
Not for motor type: -
Min:
0
Calculated: -
Dyn. index: -
Unit group: -
Scaling: -
Max:
2
Access level: 3
Function diagram: -
Unit selection: -
Expert list: 1
Factory setting:
0

Description: Sets the processing mode for PROFIdrive STW1.10 "master control by PLC".
Generally, control world 1 is received with the first receive word (PZD1) (this is in conformance to the PROFIdrive profile). The behavior of STW1.10 = 0 corresponds to that of the PROFIdrive profile. For other applications that deviate from this, the behavior can be adapted using this particular parameter.

Value:
0: Freeze setpoints and continue to process sign-of-life
1: Freeze setpoints and sign-of-life
2: Do not freeze setpoints

Recommendation: Do not change the setting p2037 = 0.

Note: If the STW1 is not transferred according to the PROFIdrive with PZD1 (with bit 10 "master control by PLC"), then p2037 should be set to 2.

p2038 IF1 PROFIdrive STW/ZSW interface mode / PD STW/ZSW IF mode

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	2	0

Description: Displays the interface mode of the PROFIdrive control words and status words.

Value:
0: SINAMICS
1: SIMODRIVE 611 universal
2: VIK-NAMUR

Dependency: See also: p0922, p2079

Notice: The parameter is protected and cannot be changed.

Note: For telegram selection p0922 (p2079) = 20, then p2038 is automatically set = 2.
When another telegram is selected, then p2038 is automatically set = 0.

p2039 Select debug monitor interface / Debug mon select

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	3	0

Description: Sets the serial interface for the debug monitor.
The serial interface for the debug monitor is COM1 (X140) or COM2 (internal).
Value = 0: COM2 (internal)
Value = 1: COM1 (X140), commissioning protocol is deactivated
Value = 2: COM2 (internal)
Value = 3: Reserved

p2040 Fieldbus interface monitoring time / Fieldbus t_mon

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	1999999 [ms]	100 [ms]

Description: Sets the monitoring time to monitor the process data received via the fieldbus interface.
If no process data is received within this time, then an appropriate message is output.

Dependency: See also: p2030

Note: The parameter is only relevant for the setting of the following fieldbus protocols.
- USS (X140) (p2030 = 6)
- Modbus TCP (p2030 = 13)
Value = 0: Monitoring is deactivated.

p2042 PROFIBUS Ident Number / PB ident no

CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Sets the PROFIBUS ident number (PNO-ID).

SINAMICS can be operated with various identities on PROFIBUS. This allows the use of a PROFIBUS GSD that is independent of the device (e.g. PROFIdrive VIK-NAMUR with ident number 3AA0 hex).

Value:
0: SINAMICS
1: VIK-NAMUR

Note: Every change only becomes effective after a POWER ON.

r2043.0...2 BO: IF1 PROFIdrive PZD state / IF1 PD PZD state

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 2410
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the PROFIdrive PZD state.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Setpoint failure	Yes	No	-
01	Clock cycle synchronous operation active	Yes	No	-
02	Fieldbus running	Yes	No	-

Dependency: See also: p2044

Note: When using the "setpoint failure" signal, the bus can be monitored and an application-specific response triggered when the setpoint fails.

p2044 IF1 PROFIdrive fault delay / IF1 PD fault delay

VECTOR_G, B_INF, ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2410
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [s]	100 [s]	0 [s]

Description: Sets the delay time to initiate fault F01910 after a setpoint failure.

The time until the fault is initiated can be used by the application. This means that it is possible to respond to the failure while the drive is still operational (e.g. emergency retraction).

Dependency: See also: r2043

p2045 CI: PB/PN clock synchronous controller sign-of-life signal source / PB/PN ctr SoL s_s

VECTOR_G (n/M), ENC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Integer16	**Dyn. index:** -	**Function diagram:** 2410
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Connector input for the sign-of-life of the clock synchronous PROFIBUS/PROFINET controller.

The sign-of-life is expected at bits 12 to 15. Bits 0 to 11 are not evaluated.

The sign-of-life signal is normally received in PZD4 (control word 2) from the controller.

Dependency: See also: p0925, r2065

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p2047 PROFIBUS additional monitoring time / PB suppl t_mon

CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 2410
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	20000 [ms]	0 [ms]

Description: Sets the additional monitoring time to monitor the process data received via PROFIBUS.
Enables short bus faults to be compensated.
If no process data is received within this time, then an appropriate message is output.

Recommendation: In the isochronous mode, the additional monitoring time should not be set.

Note: For controller STOP, the additional monitoring time is not effective.

p2048 IF1 PROFIdrive PZD sampling time / IF1 PZD t_samp

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1(3)	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1.00 [ms]	16.00 [ms]	4.00 [ms]

Description: Sets the sampling time for the cyclic interface 1 (IF1).

Note: The system only permits certain sampling times and after writing to this parameter, displays the value that has actually been set.
For clock cycle synchronous operation, the specified bus cycle time applies (Tdp).

Scaling: -
Max:
4

Access level: 3
Function diagram: 2410
Unit selection: -
Expert list: 1
Factory setting:
-

Description: Status display for the PROFIBUS interface.

Value:
0: OFF
1: No connection (search for baud rate)
2: Connection OK (baud rate found)
3: Cyclic connection with master (data exchange)
4: Cyclic data OK

Note: For r2054 = 2:
If the state is not exited, then set or check the PROFIBUS address in p0918.
For r2054 = 3:
In state 3 (the LED flashes green), a cyclic connection has been established to the PROFIBUS master; however, one of the following prerequisites is missing for cyclic operation:
- no setpoints are being received as the PROFIBUS master is in the STOP condition.
Only for isochronous operation, the following applies:
- the drive is not in synchronism as the global control (GC) has an error.
For r2054 = 4:
In the status 4 (LED green), the cyclic connection to the PROFIBUS master has been established and setpoints are being received. The clock cycle synchronization is OK, the global control (GC) is error-free.
This state does not provide any statement regarding the quality of the clock cycle synchronous sign-of-life characters on the drive objects.

Not for motor type: - | **Scaling:** - | **Expert list:** 1
Min: | **Max:** | **Factory setting:**
- | - | 0

Description: Sets the signal source for the connector-binector converter.
A PZD receive word can be selected as signal source. The signals are available to be serially passed-on (interconnection).

Dependency: See also: r2094, r2095

Note: From the signal source set via the connector input, the corresponding lower 16 bits are converted.
p2099[0...1] together with r2094.0...15 and r2095.0...15 forms two connector-binector converters:
Connector input p2099[0] to binector output in r2094.0...15
Connector input p2099[1] to binector output in r2095.0...15

p2100[0...19] Change fault response fault number / Chg resp flt_no

All objects

0	65535	0

Description: Selects the faults for which the fault response should be changed

Dependency: The fault is selected and the required response is set under the same index.
See also: p2101

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chg resp resp

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 8050, 8075
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	0	0

Description: Sets the fault response for the selected fault.

Value:
0: NONE

Dependency: The fault is selected and the required response is set under the same index.

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:
- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2101[0...19] Change fault response response / Chg resp resp

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 8050, 8075
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	7	0

Description: Sets the fault response for the selected fault.

Value:
0: NONE
1: OFF1
2: OFF2
3: OFF3
5: STOP2
6: Internal armature short-circuit / DC braking
7: ENCODER (p0491)

Dependency: The fault is selected and the required response is set under the same index.
See also: p2100

Notice: For the following cases, it is not possible to re-parameterize the fault response to a fault:
- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- fault response is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.
The fault response can only be changed for faults with the appropriate identification (see the List Manual, chapter "Faults and alarms").
Example:
F12345 and fault response = OFF3 (OFF1, OFF2, NONE)
--> The default fault response OFF3 can be changed to OFF1, OFF2 or NONE.
For value = 1 (OFF1):
Braking along the ramp-function generator down ramp followed by a pulse inhibit.
For value = 2 (OFF2):
Internal/external pulse inhibit.
For value = 3 (OFF3):
Braking along the OFF3 down ramp followed by a pulse inhibit.
For value = 5 (STOP2):
n_set = 0
For value = 6 (armature short-circuit, internal/DC braking):
The value can only be set for all motor data sets when p1231 = 3, 4.
a) For synchronous motors (p0300 = 2xx, 4xx), an internal armature short-circuit is executed.
b) For induction motors (p0300 = 1xx), a DC braking is initiated.
For value = 7 (ENCODER (p0491)):
The fault response set in p0491 is executed if applicable.
Note:
IASC: Internal Armature Short Circuit
DCBRK: DC braking

Description: Sets the signal source for external fault 3.
External fault 3 is initiated by the following AND logic operation:
- BI: p2108 negated
- BI: p3111
- BI: p3112 negated

Dependency: See also: p3110, p3111, p3112
See also: F07862

Note: An external fault is triggered with a 0 signal.
If this fault is output at the Control Unit, then it is transferred to all existing drive objects.

p2108[0...n] BI: External fault 3 / External fault 3

VECTOR_G, B_INF	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2546
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for external fault 3.
External fault 3 is initiated by the following AND logic operation:
- BI: p2108 negated
- BI: p3111
- BI: p3112 negated

Dependency: See also: p3110, p3111, p3112
See also: F07862

Note: An external fault is triggered with a 0 signal.
If this fault is output at the Control Unit, then it is transferred to all existing drive objects.

r2109[0...63] Fault time removed in milliseconds / t_flt rem ms

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 8050, 8060
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the fault was removed.
Dependency: See also: r0945, r0947, r0948, r0949, r2114, r2130, r2133, r2136, r3115, r3120, r3122
Notice: The time comprises r2136 (days) and r2109 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.

r2110[0...63] Alarm number / Alarm number

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8065
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: This parameter is identical to r2122.

p2111 Alarm counter / Alarm counter

All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8050, 8065
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	65535	0

Description: Number of alarms that have occurred after the last reset.
Dependency: When p2111 is set to 0, the following is initiated:
- all of the alarms of the alarm buffer that have gone [0...7] are transferred into the alarm history [8...63].
- the alarm buffer [0...7] is deleted.
See also: r2110, r2122, r2123, r2124, r2125
Note: The parameter is reset to 0 at POWER ON.

p2112 BI: External alarm 1 / External alarm 1

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1

Description: Sets the signal source for external alarm 1.
Dependency: See also: A07850
Note: An external alarm is triggered with a 0 signal.

p2112[0...n] BI: External alarm 1 / External alarm 1

VECTOR_G, B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2546
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for external alarm 1.
Dependency: See also: A07850
Note: An external alarm is triggered with a 0 signal.

r2114[0...1] System runtime total / Sys runtime tot

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the total system runtime for the drive unit.
The time comprises r2114[0] (milliseconds) and r2114[1] (days).
After r2114[0] has reached a value of 86.400.000 ms (24 hours) this value is reset and r2114[1] is incremented.
Index: [0] = Milliseconds
[1] = Days
Dependency: See also: r0948, r2109, r2123, r2125, r2130, r2136, r2145, r2146
Note: The time in r2114 is used to display the times for faults and alarms.
When the electronic power supply is switched out, the counter values are saved.
After the drive unit is switched on, the counter continues to run with the last value that was saved.

p2116 BI: External alarm 2 / External alarm 2

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for external alarm 2.
Dependency: See also: A07851
Note: An external alarm is triggered with a 0 signal.

p2116[0...n] BI: External alarm 2 / External alarm 2

VECTOR_G, B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2546
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for external alarm 2.
Dependency: See also: A07851
Note: An external alarm is triggered with a 0 signal.

p2117 BI: External alarm 3 / External alarm 3

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for external alarm 3.
Dependency: See also: A07852
Note: An external alarm is triggered with a 0 signal.

p2117[0...n] BI: External alarm 3 / External alarm 3

VECTOR_G, B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 2546
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for external alarm 3.
Dependency: See also: A07852
Note: An external alarm is triggered with a 0 signal.

p2118[0...19] Change message type message number / Chg type msg_no

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8050, 8075
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: Selects faults or alarms for which the message type should be changed.
Dependency: Selects the fault or alarm selection and sets the required type of message realized under the same index.
See also: p2119
Note: Re-parameterization is also possible if a message is present. The change only becomes effective after the message has gone.

p2119[0...19] Change message type type / Change type type

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 8050, 8075
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	3	1

Description: Sets the message type for the selected fault or alarm.
Value:
1: Fault (F)
2: Alarm (A)
3: No message (N)
Dependency: Selects the fault or alarm selection and sets the required type of message realized under the same index.
See also: p2118

Note: Re-parameterization is also possible if a message is present. The change only becomes effective after the message has gone.
The message type can only be changed for messages with the appropriate identification (exception, value = 0).
Example:
F12345(A) --> Fault F12345 can be changed to alarm A12345.
In this case, the message number that may be possibly entered in p2100[0...19] and p2126[0...19] is automatically removed.

r2120 CO: Sum of fault and alarm buffer changes / Sum buffer changed

All objects

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8065
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the sum of all of the fault and alarm buffer changes in the drive unit.
Dependency: See also: r0944, r2121

r2121 CO: Counter alarm buffer changes / A buff changed

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8065
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: This counter is incremented every time the alarm buffer changes.
Dependency: See also: r2110, r2122, r2123, r2124, r2125

r2122[0...63] Alarm code / Alarm code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8050, 8065
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the number of alarms that have occurred.
Dependency: See also: r2110, r2123, r2124, r2125, r2134, r2145, r2146, r3121, r3123
Notice: The properties of the alarm buffer should be taken from the corresponding product documentation.
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
Alarm buffer structure (general principle):
r2122[0], r2124[0], r2123[0], r2125[0] --> alarm 1 (the oldest)
. . .
r2122[7], r2124[7], r2123[7], r2125[7] --> Alarm 8 (the latest)
When the alarm buffer is full, the alarms that have gone are entered into the alarm history:
r2122[8], r2124[8], r2123[8], r2125[8] --> Alarm 1 (the latest)
. . .
r2122[63], r2124[63], r2123[63], r2125[63] --> alarm 56 (the oldest)

r2123[0...63] Alarm time received in milliseconds / t_alarm recv ms

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 8050, 8065
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the alarm occurred.
Dependency: See also: r2110, r2114, r2122, r2124, r2125, r2134, r2145, r2146, r3121, r3123
Notice: The time comprises r2145 (days) and r2123 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r2124[0...63] Alarm value / Alarm value

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dyn. index:** -	**Function diagram:** 8050, 8065
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays additional information about the active alarm (as integer number).
Dependency: See also: r2110, r2122, r2123, r2125, r2134, r2145, r2146, r3121, r3123
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r2125[0...63] Alarm time removed in milliseconds / t_alarm rem ms

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 8050, 8065
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [ms]	- [ms]	- [ms]

Description: Displays the system runtime in milliseconds when the alarm was cleared.
Dependency: See also: r2110, r2114, r2122, r2123, r2124, r2134, r2145, r2146, r3121, r3123
Notice: The time comprises r2146 (days) and r2125 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.

p2126[0...19] Change acknowledge mode fault number / Chg ackn flt_no

All objects	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8050, 8075
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	65535	0

Description: Selects the faults for which the acknowledge mode is to be changed
Dependency: Selects the faults and sets the required acknowledge mode realized under the same index
See also: p2127
Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.

p2127[0...19] Change acknowledge mode mode / Chg ackn mode

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 8050, 8075
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	3	1

Description: Sets the acknowledge mode for selected fault.

Value:
1: Acknowledgment only using POWER ON
2: Ack IMMEDIATELY after the fault cause has been removed
3: Acknowledgment only for PULSE INHIBIT

Dependency: Selects the faults and sets the required acknowledge mode realized under the same index
See also: p2126

Notice: It is not possible to re-parameterize the acknowledge mode for a fault in the following cases:
- fault number does not exist (exception value = 0).
- Message type is not "fault" (F).
- Acknowledge mode is not permissible for the set fault number.

Note: Re-parameterization is also possible if a fault is present. The change only becomes effective after the fault has been resolved.
The acknowledge mode can only be changed for faults with the appropriate identification.
Example:
F12345 and acknowledge mode = IMMEDIATELY (POWER ON)
--> The acknowledge mode can be changed from IMMEDIATELY to POWER ON.

p2128[0...15] Faults/alarms trigger selection / F/A trigger sel

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8050, 8070
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	65535	0

Description: Sets the faults/alarms for which a trigger signal should be generated in r2129.0...15.

Dependency: If the fault/alarm set in p2128[0...15] occurs, then the particular binector output r2129.0...15 is set.
See also: r2129

r2129.0...15 CO/BO: Faults/alarms trigger word / F/A trigger word

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8070
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the trigger signals of the faults/alarms set in p2128[0...15].

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Trigger signal p2128[0]	ON	OFF	-
01	Trigger signal p2128[1]	ON	OFF	-
02	Trigger signal p2128[2]	ON	OFF	-
03	Trigger signal p2128[3]	ON	OFF	-
04	Trigger signal p2128[4]	ON	OFF	-
05	Trigger signal p2128[5]	ON	OFF	-

06	Trigger signal p2128[6]	ON	OFF	-
07	Trigger signal p2128[7]	ON	OFF	-
08	Trigger signal p2128[8]	ON	OFF	-
09	Trigger signal p2128[9]	ON	OFF	-
10	Trigger signal p2128[10]	ON	OFF	-
11	Trigger signal p2128[11]	ON	OFF	-
12	Trigger signal p2128[12]	ON	OFF	-
13	Trigger signal p2128[13]	ON	OFF	-
14	Trigger signal p2128[14]	ON	OFF	-
15	Trigger signal p2128[15]	ON	OFF	-

Dependency: If the fault/alarm set in p2128[0...15] occurs, then the particular binector output r2129.0...15 is set.
See also: p2128

Note: CO: r2129 = 0 --> None of the selected messages has occurred.
CO: r2129 > 0 --> At least one of the selected messages has occurred.

r2130[0...63] Fault time received in days / t_fault recv days

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the system runtime in days when the fault occurred.

Dependency: See also: r0945, r0947, r0948, r0949, r2109, r2114, r2133, r2136, p3100, r3115, r3120, r3122

Notice: The time comprises r2130 (days) and r0948 (milliseconds).
The time display depends on the selected mode (p3100).

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2131 CO: Actual fault code / Act fault code

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the code of the oldest active fault.

Dependency: See also: r3131, r3132

Note: 0: No fault present.

r2132 CO: Actual alarm code / Alarm code act

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8065
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the code of the last alarm that occurred.

Note: 0: No alarm present.

r2133[0...63] Fault value for float values / Fault val float

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays additional information about the fault that occurred for float values.
Dependency: See also: r0945, r0947, r0948, r0949, r2109, r2130, r2136, r3115
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2134[0...63] Alarm value for float values / Alarm value float

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8065
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays additional information about the active alarm for float values.
Dependency: See also: r2110, r2122, r2123, r2124, r2125, r2145, r2146, r3121, r3123
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2135.0...15 CO/BO: Status word faults/alarms 2 / ZSW fault/alarm 2

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 2548
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the second status word of faults and alarms.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Fault encoder 1	Yes	No	-
01	Fault encoder 2	Yes	No	-
02	Fault encoder 3	Yes	No	-
12	Fault motor overtemperature	Yes	No	8016
13	Fault power unit thermal overload	Yes	No	8021
14	Alarm motor overtemperature	Yes	No	8016
15	Alarm power unit thermal overload	Yes	No	8021

r2136[0...63] Fault time removed in days / t_flt rem days

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the system runtime in days when the fault was removed.
Dependency: See also: r0945, r0947, r0948, r0949, r2109, r2114, r2130, r2133, r3115, r3120, r3122
Notice: The time comprises r2136 (days) and r2109 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2138.7...15 CO/BO: Control word faults/alarms / STW fault/alarm

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 2546
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the control word of faults and alarms.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
07	Acknowledge fault	Yes	No	8060
10	External alarm 1 (A07850) effective	Yes	No	8065
11	External alarm 2 (A07851) effective	Yes	No	8065
12	External alarm 3 (A07852) effective	Yes	No	8065
13	External fault 1 (F07860) effective	Yes	No	8060
14	External fault 2 (F07861) effective	Yes	No	8060
15	External fault 3 (F07862) effective	Yes	No	8060

Dependency: See also: p2103, p2104, p2105, p2106, p2107, p2108, p2112, p2116, p2117, p3110, p3111, p3112

r2139.0...15 CO/BO: Status word faults/alarms 1 / ZSW fault/alarm 1

All objects

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 2548
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for status word 1 of faults and alarms.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Being acknowledged	Yes	No	-
01	Acknowledgment required	Yes	No	-
03	Fault present	Yes	No	8060
05	Safety message present	Yes	No	-
06	Internal message 1 present	Yes	No	-
07	Alarm present	Yes	No	8065
08	Internal message 2 present	Yes	No	-
11	Alarm class bit 0	High	Low	-
12	Alarm class bit 1	High	Low	-
13	Maintenance required	Yes	No	-
14	Maintenance urgently required	Yes	No	-
15	Fault gone/can be acknowledged	Yes	No	-

Note: For bit 03, 05, 07:

These bits are set if at least one fault/alarm occurs. Data is entered into the fault/alarm buffer with delay. For this reason, the fault/alarm buffer should only be read if, after "Fault active" or "Alarm active" occurs, a change is also identified in the buffer (r0944, r9744, r2121).

For bit 06, 08:

These status bits are used for internal diagnostic purposes only.

For bit 12, 11:

These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.

p2140[0...n] Hysteresis speed 2 / n_hysteresis 2

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8010
	P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	300.00 [rpm]	90.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the following signals:
"|n_act| < = speed threshold value 2" (BO: r2197.1)
"|n_act| > speed threshold value 2" (BO: r2197.2)

Dependency: See also: p2155, r2197

p2141[0...n] Speed threshold 1 / n_thr val 1

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8010
	P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	5.00 [rpm]

Description: Sets the speed threshold value for the signal "f or n comparison value reached or exceeded" (BO: r2199.1).

Dependency: See also: p2142, r2199

p2142[0...n] Hysteresis speed 1 / n_hysteresis 1

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8010
	P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	300.00 [rpm]	2.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the signal "f or n / v comparison value reached or exceeded" (BO: r2199.1).

Dependency: See also: p2141, r2199

p2144[0...n] BI: Motor stall monitoring enable (negated) / Mot stall enab neg

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 8012
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the negated enable (0 = enable) of the motor stall monitoring.

Dependency: See also: p2163, p2164, p2166, r2197, r2198
See also: F07900

Note: When interconnecting the enable signal with r2197.7 then the stall signal is suppressed if there is no speed setpoint - actual value deviation.

r2145[0...63] Alarm time received in days / t_alarm recv days

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8065
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the system runtime in days when the alarm occurred.
Dependency: See also: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2146, r3121, r3123
Notice: The time comprises r2145 (days) and r2123 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

r2146[0...63] Alarm time removed in days / t_alarm rem days

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 8065
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the system runtime in days when the alarm was cleared.
Dependency: See also: r2110, r2114, r2122, r2123, r2124, r2125, r2134, r2145, r3121, r3123
Notice: The time comprises r2146 (days) and r2125 (milliseconds).
Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).

p2147 Delete fault buffer of all drive objects / Del fault buffer

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 8060
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Setting to delete the fault buffer of all existing drive objects.
Value:
0: Inactive
1: Start to delete the fault buffer of all drive objects
Dependency: See also: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136
Note: p2147 is automatically set to 0 after execution.
In order that faults with "POWER ON" acknowledgment can also be cleared from the fault buffer, POWER ON must first be carried out.

p2148[0...n] BI: RFG active / RFG active

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 8011
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for the signal "ramp-function generator active" for the following signals/messages:
"Speed setpoint - actual value deviation within tolerance t_on" (BO: r2199.4)
"Ramp-up/ramp-down completed" (BO: r2199.5)
Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

Note: The binector input is automatically pre-assigned to r1199.2.

The following applies for SERVO:

The pre-assignment using the automatic calculation of the motor/control parameters in the drive (p0340 = 1, 3, 5) is only realized if, at the instant of the calculation, the "setpoint channel" function module is active (r0108.8 = 1). If the calculation in p0340 is not selected when downloading parameters, then the parameter is not pre-assigned.

p2149[0...n] Monitoring configuration / Mon config

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 3

Data type: Unsigned16 | **Dyn. index:** DDS, p0180 | **Function diagram:** -

P group: Messages | **Unit group:** - | **Unit selection:** -

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min: | **Max:** | **Factory setting:**

- | - | 0000 0000 0000 0001 bin

Description: Sets the configuration for messages and monitoring functions.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Enable alarm A07903	Yes	No	8011
01	Load monitoring only in the 1st quadrant	Yes	No	8013
03	Reserved			-
06	Enable underspeed monitoring	Yes	No	8010
15	Automatic parameterization carried out (p0340 = 1, p3900 > 0)	Yes	No	-

Dependency: See also: r2197

See also: A07903

Note: For bit 00:

Alarm A07903 is output when the bit is set with r2197.7 = 0 (n_set <> n_act).

For bit 01:

When the bit is set, the load monitoring is only executed in the 1st quadrant as a result of the positive characteristic parameters (p2182 ... p2190).

For bit 03:

When the bit is set, r2197.1 and r2197.2 are determined using separate hysteresis functions.

For bit 06:

When the bit is set, with r2197.1 = 1 (n_act < p2155 speed threshold value 2), then alarm A08721 is output, and with r2199.0 = 1 (n_act < p2161 speed threshold value 3), then fault F07822 is output.

For separately excited synchronous motors (without encoder) in torque control (p1501 set), the underspeed speed monitoring is automatically activated if conditions (p0300 = 5, p1300 = 20) for the automatic pre-assignment of the threshold values during commissioning (p0340 = 1) are fulfilled.

The alarm threshold p2155 is preassigned with 1.5 * p1755 - and the fault threshold p2161, with p1755.

For bit 15:

The bit indicates whether the automatic parameterization (p0340 = 1, p3900 > 0) for the parameters of the extended monitoring functions was carried out.

If the bit is not set (e.g. when the configuration is activated (p0108.15)), the parameterization is automatically carried out during booting even if r3925.0 is already 1.

p2150[0...n] Hysteresis speed 3 / n_hysteresis 3

VECTOR_G

Can be changed: U, T | **Calculated:** CALC_MOD_LIM_REF | **Access level:** 3

Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** 8010, 8011

P group: Messages | **Unit group:** 3_1 | **Unit selection:** p0505

Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min: | **Max:** | **Factory setting:**

0.00 [rpm] | 300.00 [rpm] | 2.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the following signals:

"|n_act| < speed threshold value 3" (BO: r2199.0)

"n_set >= 0" (BO: r2198.5)

"n_act >= 0" (BO: r2197.3)

Dependency: See also: p2161, r2197, r2199

p2151[0...n] CI: Speed setpoint for messages/signals / n_set for msg

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 8011
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	1170[0]

Description: Sets the signal source for the speed setpoint for the following messages:
"Speed setpoint - actual value deviation within tolerance t_off" (BO: r2197.7)
"Ramp-up/ramp-down completed" (BO: r2199.5)
"|n_set| < p2161" (BO: r2198.4)
"n_set > 0" (BO: r2198.5)

Dependency: See also: r2197, r2198, r2199

p2153[0...n] Speed actual value filter time constant / n_ActV filt Tc

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8010
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	1000000 [ms]	0 [ms]

Description: Sets the time constant of the PT1 element to smooth the speed / velocity actual value.
The smoothed actual speed/velocity is compared with the threshold values and is only used for messages and signals.

Dependency: See also: r2169

p2154[0...n] CI: Speed setpoint 2 / n_set 2

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 8010
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for speed setpoint 2.
The sum of p2151 and p2154 is used for the following messages/signals:
"Speed setpoint - actual value deviation within tolerance t_off" (r2197.7)
"Speed setpoint - actual value deviation within tolerance t_on" (r2199.4)
"Ramp-up/ramp-down completed" (r2199.5)

Dependency: See also: p2151, r2197, r2199

p2155[0...n] Speed threshold 2 / n_thr val 2

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8010
	P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	900.00 [rpm]

Description: Sets the speed threshold value for the following messages:
"|n_act| < = speed threshold value 2" (BO: r2197.1)
"|n_act| > speed threshold value 2" (BO: r2197.2)

Dependency: See also: p2140, r2197
See also: A07821

Caution: The filter monitoring function is deactivated with p2155 = 0.0.

Note: The parameter is used as alarm threshold for underspeed monitoring.
Monitoring for an underspeed condition is automatically activated internally for encoderless separately-excited synchronous motors in closed-loop torque controlled operation (p0300 = 5, p1300 = 20, p1501 = 1 signal) - and can be manually activated with p2149.6 = 1.
For separately excited synchronous motors, when exiting commissioning (p0340 = 5), this parameter is automatically assigned 1.5 * p1755.

p2156[0...n] On-delay comparison value reached / t_on cmpr val rchd

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8010
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [ms]	10000.0 [ms]	0.0 [ms]

Description: Sets the switch-on delay time for the signal "comparison value reached" (BO: r2199.1).

Dependency: See also: p2141, p2142, r2199

p2161[0...n] Speed threshold 3 / n_thr val 3

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8010, 8011
P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	210000.00 [rpm]	5.00 [rpm]

Description: Sets the speed threshold value for the signal "|n_act| < speed threshold value 3" (BO: r2199.0).

Dependency: See also: p2142, r2199
See also: F07822

Caution: The threshold monitoring function is deactivated with p2161 = 0.0.

Note: The parameter is used as fault threshold for underspeed monitoring
Monitoring for an underspeed condition is automatically activated internally for encoderless separately-excited synchronous motors in closed-loop torque controlled operation (p0300 = 5, p1300 = 20, p1501 = 1 signal) - and can be manually activated with p2149.6 = 1.
For separately excited synchronous motors, when exiting commissioning (p0340 = 5), this parameter is automatically assigned p1755.

p2162[0...n] Hysteresis speed n_act > n_max / Hyst n_act>n_max

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8010
P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	60000.00 [rpm]	0.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the signal "n_act > n_max" (BO: r2197.6).

Dependency: See also: r1084, r1087, r2197

Notice: For p0322 = 0, the following applies: p2162 <= 0.1 * p0311
For p0322 > 0, the following applies: p2162 <= 1.02 * p0322 - p1082
If one of the conditions is violated, p2162 is appropriately and automatically reduced when exiting the commissioning mode.

Note: For a negative speed limit (r1087) the hysteresis is effective below the limit value and for a positive speed limit (r1084) above the limit value.
If significant overshoot occurs in the maximum speed range (e.g. due to load shedding), you are advised to increase the dynamic response of the speed controller (if possible). If this is insufficient, the hysteresis p2162 can only be increased by more than 10% of the rated speed when the maximum speed (p0322) of the motor is sufficiently greater than the speed limit p1082.

p2163[0...n] Speed threshold 4 / n_thr val 4

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8011
P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	210000.00 [rpm]	90.00 [rpm]

Description: Sets the speed threshold value for the "speed setpoint - actual value deviation in tolerance t_off" signal/message (BO: r2197.7).

Dependency: See also: p2164, p2166, r2197

p2164[0...n] Hysteresis speed 4 / n_hysteresis 4

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8011
P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	200.00 [rpm]	2.00 [rpm]

Description: Sets the hysteresis speed (bandwidth) for the "speed setpoint - actual value deviation in tolerance t_off" signal/message (BO: r2197.7).

Dependency: See also: p2163, p2166, r2197

p2166[0...n] Off-delay n_act = n_set / t_del_off n_i=n_so

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2

P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [ms]	10000.0 [ms]	200.0 [ms]

Description: Sets the switch-off delay time for the "speed setpoint - actual value deviation in tolerance t_off" signal/message (BO: r2197.7).

Dependency: See also: p2163, p2164, r2197

p2167[0...n] Switch-on delay n_act = n_set / t_on n_act=n_set

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8011
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [ms]	10000.0 [ms]	200.0 [ms]

Description: Sets the switch-on delay for the "speed setpoint - actual value deviation in tolerance t_on" signal/message (BO: r2199.4).

r2169 CO: Actual speed smoothed signals / n_act smth message

VECTOR_G

Can be changed: -
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 8010
P group: Messages
Unit group: 3_1
Unit selection: p0505
Not for motor type: -
Scaling: p2000
Expert list: 1
Min:
Max:
Factory setting:
- [rpm]
- [rpm]
- [rpm]

Description: Display and connector output of the smoothed speed actual value for messages.
Dependency: See also: p2153

p2174[0...n] Torque threshold value 1 / M_thr val 1

VECTOR_G

Can be changed: U, T
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dyn. index: DDS, p0180
Function diagram: 8012
P group: Messages
Unit group: 7_1
Unit selection: p0505
Not for motor type: -
Scaling: -
Expert list: 1
Min:
Max:
Factory setting:
0.00 [Nm]
20000000.00 [Nm]
5.13 [Nm]

Description: Sets the torque threshold value for the messages:
"Torque setpoint < torque threshold value 1 and n_set reached" (BO: r2198.9)
"Torque setpoint < torque threshold value 1" (BO: r2198.10)
"Torque setpoint > torque threshold value 1" (BO: r2198.13)
Dependency: See also: p2195, r2198

p2175[0...n] Motor blocked speed threshold / Mot blk n_thr

VECTOR_G

Can be changed: U, T
Calculated: CALC_MOD_LIM_REF
Access level: 3
Data type: FloatingPoint32
Dyn. index: DDS, p0180
Function diagram: 8012
P group: Messages
Unit group: 3_1
Unit selection: p0505
Not for motor type: -
Scaling: -
Expert list: 1
Min:
Max:
Factory setting:
0.00 [rpm]
210000.00 [rpm]
120.00 [rpm]

Description: Sets the speed threshold for the message "Motor blocked" (BO: r2198.6).
Dependency: See also: p0500, p2177, r2198
See also: F07900
Note: The following applies for sensorless vector control for induction motors:
At low speeds in open-loop speed controlled operation (see p1755, p1756), a blocked motor cannot be detected.
The following applies for sensorless vector control for permanent magnet synchronous motors:
At low speeds in open-loop speed controlled operation (see p1755, p1756), a blocked motor can only be detected if p2175 = p1755, and p1750.6 is set to 1.

p2177[0...n] Motor blocked delay time / Mot blk t_del

VECTOR_G

Can be changed: U, T
Calculated: CALC_MOD_LIM_REF
Access level: 2
Data type: FloatingPoint32
Dyn. index: DDS, p0180
Function diagram: 8012
P group: Messages
Unit group: -
Unit selection: -
Not for motor type: -
Scaling: -
Expert list: 1
Min:
Max:
Factory setting:
0.000 [s]
65.000 [s]
1.000 [s]

Description: Sets the delay time for the message "Motor blocked" (BO: r2198.6).
Dependency: See also: p0500, p2175, r2198
See also: F07900

Note: The following applies for sensorless vector control:
At low speeds a locked motor can only be detected if no change is made to open-loop speed controlled operation. If this is the case, the value in p2177 must be reduced accordingly (p2177 < p1758) before time p2177 has elapsed in order to detect the locked state reliably.
As countermeasure, it is generally also possible to set p1750.6. This is only not permitted if the drive is slowly reversed by the load at the torque limit (speed below p1755 for longer than p1758).

p2178[0...n] Motor stalled delay time / Mot stall t_del

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_REG	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8012
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	10.000 [s]	0.010 [s]

Description: Sets the delay time for the message "Motor stalled" (BO: r2198.7).
Dependency: See also: r2198

p2181[0...n] Load monitoring response / Load mon resp

VECTOR_G (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 8013
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	6	0

Description: Sets the response when evaluating the load monitoring.
Value:
0: Load monitoring disabled
1: A07920 for torque/speed too low
2: A07921 for torque/speed too high
3: A07922 for torque/speed out of tolerance
4: F07923 for torque/speed too low
5: F07924 for torque/speed too high
6: F07925 for torque/speed out of tolerance
Dependency: See also: p2182, p2183, p2184, p2185, p2186, p2187, p2188, p2189, p2190, p2192, r2198
See also: A07920, A07921, A07922, F07923, F07924, F07925
Note: The response to the faults F07923 ... F07925 can be set.
This parameter setting has no effect on the generation of fault F07936.

p2182[0...n] Load monitoring speed threshold value 1 / n_thr 1

VECTOR_G (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8013
P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	210000.00 [rpm]	150.00 [rpm]

Description: Sets the speed/torque envelope curve for load monitoring.
The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:
p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)
p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)
p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)
Dependency: The following applies: p2182 < p2183 < p2184
See also: p2183, p2184, p2185, p2186
See also: A07926
Note: In order that the load monitoring can reliably respond, the speed threshold p2182 should always be set lower than the minimum motor speed to be monitored.

p2183[0...n] Load monitoring speed threshold value 2 / n_thr 2

VECTOR_G (Ext msg)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8013
	P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	900.00 [rpm]

Description: Sets the speed/torque envelope curve for load monitoring.
The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:
p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)
p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)
p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)

Dependency: The following applies: p2182 < p2183 < p2184
See also: p2182, p2184, p2187, p2188
See also: A07926

p2184[0...n] Load monitoring speed threshold value 3 / n_thr 3

VECTOR_G (Ext msg)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8013
	P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [rpm]	210000.00 [rpm]	1500.00 [rpm]

Description: Sets the speed/torque envelope curve for load monitoring.
The envelope curve (upper and lower envelope curve) is defined as follows based on 3 speed thresholds:
p2182 (n_threshold 1) --> p2185 (M_threshold 1, upper), p2186 (M_threshold 1, lower)
p2183 (n_threshold 2) --> p2187 (M_threshold 2, upper), p2188 (M_threshold 2, lower)
p2184 (n_threshold 3) --> p2189 (M_threshold 3, upper), p2190 (M_threshold 3, lower)

Dependency: The following applies: p2182 < p2183 < p2184
See also: p2182, p2183, p2189, p2190
See also: A07926

Note: In order that the load monitoring can reliably respond, the speed threshold p2184 should always be set higher than the maximum motor speed to be monitored.

p2185[0...n] Load monitoring torque threshold 1 upper / M_thr 1 upper

VECTOR_G (Ext msg)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8013

	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [%]	1000.00 [%]	100.00 [%]

Description: Sets the scaling factor for torque utilization (r0033).

r2197.1...13 CO/BO: Status word monitoring 1 / ZSW mon 1

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 2534
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Display and BICO output for the first status word of the monitoring functions.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
01	|n_act| <= speed threshold value 2 p2155	Yes	No	8010
02	|n_act| > speed threshold value 2 p2155	Yes	No	8010
03	n_act >= 0	Yes	No	8011
06	|n_act| > n_max	Yes	No	8010
07	Speed setpoint - actual value deviation in tolerance t_off	Yes	No	8011
13	|n_act| > n_max (F07901)	Yes	No	-

Note:
For bit 01, 02:
The threshold value is set in p2155 and the hysteresis in p2140.
For bit 03:
The hysteresis is set in p2150.
For bit 06:
The hysteresis is set in p2162.
For bit 07:
The threshold value is set in p2163 and the hysteresis is set in p2164.
For bit 13:
Only for internal Siemens use.

r2198.4...12 CO/BO: Status word monitoring 2 / ZSW monitor 2

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 2536
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Display and BICO output for the second status word of the monitoring functions.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
04	|n_set| < p2161	Yes	No	8011
05	n_set > 0	Yes	No	8011
06	Motor blocked	Yes	No	8012
07	Motor stalled	Yes	No	8012
10	|M_set| < torque threshold value 1	Yes	No	8012
11	Load in the alarm range	Yes	No	8013
12	Load in the fault range	Yes	No	8013

Note: For bit 10:
The torque threshold value 1 is set in p2174.
For bit 12:
This bit is reset after the fault cause disappears, even if the fault itself is still present.

r2199.0...14 CO/BO: Status word monitoring 3 / ZSW monitor 3

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** 2537
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the third status word of the monitoring functions.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	|n_act| < speed threshold value 3	Yes	No	8010
01	f or n comparison value reached or exceeded	Yes	No	8010
04	Speed setpoint - actual value deviation in tolerance t_on	Yes	No	8011
05	Ramp-up/ramp-down completed	Yes	No	8011
06	Current below the zero current threshold	Yes	No	8020
07	Speed deviation model/external intolerance	Yes	No	8012
11	Torque utilization < torque threshold value 2	Yes	No	8012
12	Excitation current out of tolerance (only SESM)	Yes	No	8020
13	I2t alarm threshold exceeded (only SESM)	Yes	No	8022
14	I2t fault threshold exceeded (only SESM)	Yes	No	8022

Dependency: See also: A07823, F07824, F07913

Note: SESM: separately excited synchronous motor
For bit 00:
The speed threshold value 3 is set in p2161.
For bit 01:
The comparison value is set in p2141. We recommend setting the hysteresis (p2142) for canceling the bit to a value lower than that in p2141. Otherwise, the bit is not reset.
For bit 11:
The torque threshold value 2 is set in p2194.
For bit 13:
The I2t monitoring detects when the alarm threshold is exceeded (p3243), outputs alarm A07823 and sets the status bit.
For bit 14:
The I2t monitoring detects when the fault threshold is exceeded (100 %), outputs fault A07824 and sets the status bit.

p2200[0...n] BI: Technology controller enable / Tec_ctrl enable

VECTOR_G (Tech_ctrl)

Description: Display and BICO output for the status word of the fixed value selection of the technology controller.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Technology controller fixed value selected	Yes	No	7950, 7951

r2229 Technology controller number actual / Tec_ctrl no act

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 7950
P group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the number of the selected fixed setpoint of the technology controller.

Dependency: See also: r2224

p2230[0...n] Technology controller motorized potentiometer configuration / Tec_ctr moP config

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Function diagram:** 7954
P group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0100 bin

Description: Sets the configuration for the motorized potentiometer of the technology controller.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Data save active	Yes	No	-
02	Initial rounding-off active	Yes	No	-
03	Non-volatile data save active for p2230.0 = 1	Yes	No	-
04	Ramp-function generator always active	Yes	No	-

Dependency: See also: r2231, p2240

Notice: The following prerequisites must be fulfilled in order to be able to save the setpoint in a non-volatile fashion:

- Firmware with V2.3 or higher.
- Control Unit 320 (CU320) with hardware version C or higher (module with NVRAM).

Note: For bit 00:

0: The setpoint for the motorized potentiometer is not saved and after ON is entered using p2240.

1: The setpoint for the motorized potentiometer is saved and after ON is entered using r2231. In order to save in a non-volatile fashion, bit 03 should be set to 1.

For bit 02:

0: Without initial rounding-off

1: With initial rounding-off.

The selected ramp-up/down time is correspondingly exceeded. The initial rounding-off is a sensitive way of specifying small changes (progressive reaction when keys are pressed). The jerk for initial rounding is independent of the ramp-up time and only depends on the selected maximum value (p2237).

It is calculated as follows:

r = 0.0001 x max(p2237, |p2238|) [%] / 0.13^2 [s^2]

The jerk is active until maximum acceleration is reached (a_max = p2237 [%] / p2247 [s] or a_max = p2238 [%] / p2248 [s]); after this, the drive continues to operate with constant, linear acceleration.

The higher the maximum acceleration (the lower that p2247 is), the longer the ramp-up time increases with respect to the set ramp-up time.

For bit 03:

0: Non-volatile data save deactivated.

1. The setpoint for the motorized potentiometer is saved in a non-volatile fashion (for p2230.0 = 1).

For bit 04:

When the bit is set, the ramp-function generator is computed independent of the pulse enable. The actual output value of the motorized potentiometer is always in r2250.

r2231 Technology controller motorized potentiometer setpoint memory / Tec_ctrl moP mem

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 7954
P group: Technology	**Unit group:** 9_1	**Unit selection:** p0595
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: Displays the setpoint memory for the motorized potentiometer of the technology controller.
For p2230.0 = 1, the last setpoint that was saved is entered after ON.

Dependency: See also: p2230

p2235[0...n] BI: Technology controller motorized potentiometer raise setpoint / Tec_ctrl moP raise

VECTOR_G (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** CDS, p0170	**Function diagram:** 7954
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source to continually increase the setpoint for the motorized potentiometer of the technology controller.
The setpoint change (CO: r2250) depends on the set ramp-up time (p2247) and the duration of the signal that is present (BI: p2235).

Dependency: See also: p2236

p2236[0...n] BI: Technology controller motorized potentiometer lower setpoint / Tec_ctrl moP lower

VECTOR_G (Tech_ctrl)

Description: Displays the effective setpoint after the internal ramp-function generator for the motorized potentiometer of the technology controller.

Dependency: See also: r2245

p2252 Technology controller configuration / Tec_ctrl config

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Modulation	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 0000 0111 bin

Description: Sets the configuration of the technology controller.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Ramp-up/down time independent of setpoint sign	Yes	No	-
01	Integrator independent of Kp	Yes	No	-
02	Output signal without ramp active	Yes	No	-
03	Actual value limit	Yes	No	-
07	Activate Kp adaptation	Yes	No	7958
08	Activate Tn adaptation	Yes	No	7958

Dependency: See also: p2257, p2258, p2267, p2268, p2280, p2285

Note: For bit 00 = 0:

The ramp-down time (p2258) switches to the ramp-up time (p2257) when the sign for the output signal r2260 changes. When the sign changes, the output signal is kept at zero for one arithmetic cycle.

For bit 00 = 1:

When r2260 exhibits a positive gradient, the ramp-up time (p2257) is active; when it exhibits a negative gradient, the ramp-down time (p2258) is active. The sign for r2260 does not have any effect on the ramp time.

For bit 01 = 0:

The integration time of the PID controller is evaluated with the gain factor Kp (p2280) (p2285 = integral time).

For bit 01 = 1:

The integration time of the PID controller is independent of the gain factor (p2285 = integration time) if p2280 > 0.

For bit 02 = 0:

When the PID controller is deactivated via p2200, the output signal r2294 is reduced to zero via the ramp-down time p2293.

For bit 02 = 1:

When the PID controller is deactivated via p2200, the output signal r2294 is set directly to zero.

For bit 03 = 0:

The actual values are not limited by p2267 and p2268.

For bit 03 = 1:

The actual values are limited by p2267 and p2268.

Description: Sets the scaling factor for the actual value of the technology controller.

Dependency: See also: p2264, p2265, p2267, p2268, p2271

Note: For 100%, the actual value is not changed.

p2270 Technology controller actual value function / Tec_ctr ActV fct

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 7958
P group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	3	0

Description: Setting to use an arithmetic function for the actual value signal of the technology controller.

Value:
0: Output (y) = input (x)
1: Root function (root from x)
2: Square function (x * x)
3: Cube function (x * x * x)

Dependency: See also: p2264, p2265, p2267, p2268, p2269, p2271

p2271 Technology controller actual value inversion (sensor type) / Tec_ctrl ActV inv

VECTOR_G (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 7958
P group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Setting to invert the actual value signal of the technology controller.
The inversion depends on the sensor type for the actual value signal.

Value:
0: No inversion
1: Inversion actual value signal

Caution:

If the actual value inversion is incorrectly selected, then the closed-loop control with the technology controller can become unstable and can oscillate!

Note: The correct setting can be determined as follows:
- inhibit the technology controller (p2200 = 0).
- increase the motor speed and in so doing, measure the actual value signal of the technology controller.
--> If the actual value increases as the motor speed increases, then p2271 should be set to 0 (no inversion).
--> If the actual value decreases as the motor speed increases, then p2271 should be set to 1 (the actual value signal is inverted).

p2306 Technology controller system deviation inversion / Tec_ctr SysDev inv

VECTOR_G (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 7958
P group: Technology	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Setting to invert the system deviation of the technology controller.
The setting depends on the type of control loop.

Value:
0: No inversion
1: Inversion

Caution:

If the actual value inversion is incorrectly selected, then the closed-loop control with the technology controller can become unstable and can oscillate!

Note: The correct setting can be determined as follows:
- inhibit the technology controller (p2200 = 0).
- increase the motor speed and in so doing, measure the actual value signal (of the technology controller).
- if the actual value increases with increasing motor speed, then the inversion should be switched out.
- if the actual value decreases with increasing motor speed, then the inversion should be set.

If value = 0:
The drive reduces the output speed when the actual value rises (e.g. for heating fans, intake pump, compressor).
If value = 1:
The drive increases the output speed when the actual value increases (e.g. for cooling fans, discharge pumps).

p2369 BI: Closed-loop cascade control, control word / Csc_ctrl STW

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for the selection of the "Switch in motor" function.

When the function is selected, monitoring of the switches is deactivated with the "bypass" function. This means that the power unit can be connected to other motors via an external control without switch monitoring responding.

r2700 CO: Reference speed/reference frequency / n_ref/f_ref

VECTOR_G, ENC

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and connector output for the reference quantity for speed and frequency (p2000).
All speeds or frequencies specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
This parameter has the unit rpm.
The following applies:
Reference frequency (in Hz) = reference speed (in rpm) / 60

Dependency: See also: p2000

Note: This BICO parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

r2700 CO: Reference frequency / f_ref

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and connector output of the actual reference quantity for the frequency (p2000).
All frequencies specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
This parameter has the unit Hz.

Dependency: See also: p2000

Note: This BICO parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

r2700 CO: Reference velocity/reference frequency actual / v_ref/f_ref act

ENC (Lin_enc)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and connector output for the actual reference quantity for velocity and frequency.
All velocities or frequencies specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
The following applies:
Reference frequency (in Hz) = reference velocity (in m/min) / 60

Dependency: See also: p2000

Note: This BICO parameter provides the numerical value of the reference quantity p2000 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

r2701 CO: Reference voltage / Reference voltage

VECTOR_G, B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Connector output of the reference quantity for voltages p2001.
All voltages specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
This parameter has the unit Vrms.

Dependency: See also: p2001

Note: This BICO parameter provides the numerical value of the reference quantity p2001 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

r2702 CO: Reference current / Reference current

VECTOR_G, B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Connector output of the reference quantity for currents p2002.
All currents specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
This parameter has the unit Arms.

Dependency: See also: p2002

Note: This BICO parameter provides the numerical value of the reference quantity p2002 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

r2703 CO: Reference torque / Reference torque

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Connector output of the reference quantity p2003 for torque (r0108.12 = 0) or force (r0108.12 = 1).
All torques specified as relative values (r0108.12 = 0) or forces (r0108.12 = 1) are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
The unit of this parameter is the same as the unit selected for p2003.

Dependency: p0505, r0108.12
See also: p2003

Note: This BICO parameter provides the numerical value of the reference quantity p2003 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

r2704 CO: Reference power / Reference power

VECTOR_G, B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Connector output of the reference quantity for powers p2004.
All power ratings specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
The unit of this parameter is the same as the unit selected for p2004.

Dependency: This value is calculated as voltage x current for the infeed and as torque x speed for closed-loop controls.
See also: r2004

Note: This BICO parameter provides the numerical value of the reference quantity p2004 in the currently selected unit as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.
The reference power is calculated as follows:
- 2 * Pi * reference speed / 60 * reference torque (motor)
- reference voltage * reference current * root(3) (infeed)

r2705 CO: Reference angle / Reference angle

VECTOR_G, B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Connector output of the reference quantity for angles p2005.
All angles specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
This parameter has the unit degree.

Dependency: See also: p2005

Note: This BICO parameter provides the numerical value of the reference quantity p2005 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

r2706 CO: Reference temperature / Reference temp

VECTOR_G, B_INF, TM31, TM120, TM150	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Connector output of the reference quantity for temperatures.
All temperatures specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
This parameter has the unit degree Celsius.

Note: This BICO parameter provides the numerical value of the reference quantity for the temperature as a connector output for interconnection with Drive Control Chart (DCC). The numerical value can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

r2707 CO: Reference acceleration / Ref a

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Connector output of the reference quantity for accelerations p2007.
All acceleration rates specified as relative value are referred to this reference quantity.
The reference quantity corresponds to 100% or 4000 hex (word) or 4000 0000 hex (double word).
The unit of this parameter is the same as the unit selected for p2007.

Dependency: r0108.12, p0505
See also: p2007

Note: This BICO parameter provides the numerical value of the reference quantity p2007 as a connector output for interconnection with Drive Control Chart (DCC). The numerical value in the currently selected unit can be adopted unchanged from this connector output in DCC.
This BICO parameter is not suitable for interconnecting for cyclic communication.

p2720[0...n] Load gear configuration / Load gear config

VECTOR_G

Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 bin

Description: Sets the configuration for position tracking of a load gear.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Load gear activate position tracking	Yes	No	-
01	Axis type	Linear axis	Rotary axis	-
02	Load gear reset position	Yes	No	-

Note: For the following events, the non-volatile, saved position values are automatically reset:
- when an encoder replacement has been identified.
- when changing the configuration of the Encoder Data Set (EDS).
- when adjusting the absolute encoder again

p2721[0...n] Load gear rotary absolute encoder revolutions virtual / Abs rot rev

VECTOR_G

Can be changed: C2(1, 4)	**Calculated:** -	**Access level:** 1
Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	4194303	0

Description: Sets the number of rotations that can be resolved for a rotary absolute encoder with activated position tracking of the load gear.

Dependency: This parameter is only of significance for an absolute encoder (p0404.1 = 1) with activated position tracking of the load gear (p2720.0 = 1).

Note: The resolution that is set must be able to be represented using r2723.
For rotary axes/modulo axes, the following applies:
This parameter is pre-set with p0421 when activating position tracking and can be changed.
For linear axes, the following applies:
This parameter is pre-assigned with p0421 when activating position tracking, expanded by 6 bits for multiturn information (maximum number of overflows) and cannot be changed.

p2722[0...n] Load gear position tracking tolerance window / Pos track tol

VECTOR_G	**Can be changed:** C2(1, 4)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00	4294967300.00	0.00

Description: Sets a tolerance window for position tracking.
After the system is switched on, the difference between the saved position and the actual position is determined, and depending on this, the following is initiated:
Difference within the tolerance window --> The position is reproduced as a result of the encoder actual value.
Difference outside the tolerance window --> An appropriate message is output.

Dependency: See also: F07449

Caution: Rotation, for example through a complete encoder range is not detected.

Note: The value is entered in integer (complete) encoder pulses.
For p2720.0 = 1, the value is automatically pre-assigned quarter of the encoder range.
Example:
Quarter of the encoder range = (p0408 * p0421) / 4
It is possible that the tolerance window may not be able to be precisely set due to the data type (floating point number with 23 bit mantissa).

r2723[0...n] CO: Load gear absolute value / Load gear AbsV

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Unsigned32	**Dyn. index:** DDS, p0180	**Function diagram:** 4010, 4704
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the absolute value after the load gear.

Notice: The encoder position actual value must be requested using the encoder control word Gn_STW.13.

Note: The increments are displayed in the format the same as r0483.

r2724[0...n] CO: Load gear position difference / Load gear pos diff

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Integer32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the position difference before the load gear between switching off and switching on.

Note: The increments are displayed in the same format as for r0483/r2723.
If the measuring gear of the motor encoder is not activated, the position difference should be read in encoder increments.
If the measuring gear of the motor encoder is activated, the position difference is converted using the measuring gear factor.

p2810[0...1] BI: AND logic operation inputs / AND inputs

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 2634
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal sources for the inputs of the AND logic operation.
Dependency: See also: r2811
Note: [0]: AND logic operation, input 1 --> the result is displayed in r2811.0.
[1]: AND logic operation, input 2 --> the result is displayed in r2811.0.

r2811.0 CO/BO: AND logic operation result / AND result

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 2634
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Display and BICO output for the result of the AND logic operation.
Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	AND condition fulfilled	Yes	No	-

Dependency: See also: p2810

p2816[0...1] BI: OR logic operation inputs / OR inputs

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 2634
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal sources for the inputs of the OR logic operation.
Dependency: See also: r2817
Note: [0]: OR logic operation, input 1 --> the result is displayed in r2817.0.
[1]: OR logic operation, input 2 --> the result is displayed in r2817.0.

r2817.0 CO/BO: OR logic operation result / OR result

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 2634
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Display and BICO output for the result of the OR logic operation.
Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	OR condition fulfilled	Yes	No	-

Dependency: See also: p2816

p2822[0...3] BI: NOT logic operation input / NOT input

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 2634
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal sources for the inputs of the NOT logic operations.

Index:
[0] = NOT logic operation 0 input
[1] = NOT logic operation 1 input
[2] = NOT logic operation 2 input
[3] = NOT logic operation 3 input

Dependency: See also: r2823

Note:
[0]: NOT logic operation 0 --> result is displayed in r2823.0.
[1]: NOT logic operation 1 --> result is displayed in r2823.1.
[2]: NOT logic operation 2 --> result is displayed in r2823.2.
[3]: NOT logic operation 3 --> the result is displayed in r2823.3.

r2823.0...3 CO/BO: NOT logic operation result / NOT result

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 2634
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the results of the NOT logic operations.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	NOT logic operation 0 result	High	Low	-
01	NOT logic operation 1 result	High	Low	-
02	NOT logic operation 2 result	High	Low	-
03	NOT logic operation 3 result	High	Low	-

Dependency: See also: p2822

p2900[0...n] CO: Fixed value 1 [%] / Fixed value 1 [%]

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 1021
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-10000.00 [%]	10000.00 [%]	0.00 [%]

Description: Setting and connector output for a fixed percentage value.

Dependency: See also: p2901, r2902, p2930

Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.

Note: The value can be used to interconnect a scaling function (e.g. scaling the main setpoint).

p2901[0...n] CO: Fixed value 2 [%] / Fixed value 2 [%]

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 1021
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-10000.00 [%]	10000.00 [%]	0.00 [%]

Description: Setting and connector output for a fixed percentage value.

Dependency: See also: p2900, p2930
Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.
Note: The value can be used to interconnect a scaling function (e.g. scaling of the supplementary setpoint)

r2902[0...14] CO: Fixed values [%] / Fixed values [%]

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 1021
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: Display and connector output for frequently used percentage values.
Index:
[0] = Fixed value +0 %
[1] = Fixed value +5 %
[2] = Fixed value +10 %
[3] = Fixed value +20 %
[4] = Fixed value +50 %
[5] = Fixed value +100 %
[6] = Fixed value +150 %
[7] = Fixed value +200 %
[8] = Fixed value -5 %
[9] = Fixed value -10 %
[10] = Fixed value -20 %
[11] = Fixed value -50 %
[12] = Fixed value -100 %
[13] = Fixed value -150 %
[14] = Fixed value -200 %
Dependency: See also: p2900, p2901, p2930
Note: The signal sources can, for example, be used to interconnect scalings.

p2909 Characteristic measurement control word / Char meas STW

VECTOR_G

Can be changed: T	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 bin

Description: Sets the configuration for the characteristic measurement.
Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Continue last measurement	Yes	No	-
01	Insert cooling down time during the Iq stages	Yes	No	-
02	Deactivate speed check	Yes	No	-
03	Deactivate automatic parameter preassignment	Yes	No	-

Notice: For bit 00:
- the function can only be activated if the measurement has still not been activated (p2911 = 0).
- the limit values for the measurement are loaded from the file. This means that the settings in p2920, p2921 and p2922 are not active.

Note: For bit 00:

- the last measurement of the magnetic characteristics in the d and q axes (p2910 = 1) is continued at that position up until where the data were saved (in the file).
- to record the measurement again, the measurement with the highest index is used (data.txt or data_xx.txt, xx = [1...99]).

For bit 01:

- after each measured value of the quadrature axis, the current setpoint is ramped to 0, and the system waits for the time defined in p2925[1].

For bit 03:

- the automated pre-assignment of the current controller and time parameters is deactivated (p1715, p1720, p1722, p1710, p1711, p1712, p2924, p0045).

p2911 Activating characteristic measurement / Char meas act

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	4	0

Description: Activating characteristic measurement.

Value:
0: Deactivated
1: Activated with transfer
3: Activated with acceptance and conversion
4: Activated without acceptance

Dependency: For p2910 = 1:

- the measurement can only be activated if the pulses are not enabled.
- with this setting, only a value of 4 is possible.
- for each measurement, a new file is generated with consecutive number.
- for p2909.0 = 1, as a start point, the last value saved in the file with the highest index is used, and the following values are attached to the existing file.
- the parameter cannot be changed if p0096 is not 0.

See also: r2928

Note: The characteristic measurement progress is indicated in r2928.

p2920[0...1] Characteristic measurement lower limit / Lower char limit

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-500.00 [%]	500.00 [%]	-100.00 [%]

Description: Lower limit for measuring the characteristics.

Index:
[0] = First coordinate
[1] = Second coordinate

Dependency: For p2910 = 1:

- for p2909.0 = 1, the parameter value is not taken into account .
- the value is used as setpoint for the lower current limit in the direct and quadrature axes.

Notice: The value must be less than <= p2921.

p2921[0...1] Characteristic measurement upper limit / Upper char limit

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-500.00 [%]	500.00 [%]	100.00 [%]

Description: Upper limit for measuring the characteristics.

Index: [0] = First coordinate
[1] = Second coordinate

Dependency: p2910 = 1:
- if p2909.0 is set, then the parameter value is not taken into account .
- the value is used as setpoint for the lower current limit in the direct and quadrature axes.

Notice: Der value must be >= p2920.

p2922[0...1] Characteristic measurement number of measurement points / Char meas pts qty

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	100	21

Description: Defines the number of measuring points in one coordinate direction. This defines the resolution of the measurement.
Uneven number of measuring points:
Resolution = |p2921[x]-p2920[x]|/(p2922-1)

Index: [0] = First coordinate
[1] = Second coordinate

Dependency: For p2910 = 1:
- for p2909.0 = 1, the parameter value is not taken into account .

Notice:
- the value of 0 is not included for an even number of measuring points.
- values less than 2 are not permitted.

p2923[0...1] Characteristic measurement ramp time / Char t_ramp

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	1000000 [ms]	100 [ms]

Description: Ramp time to switch to a new setpoint.
The ramp time defines the time that is required to change from the lower to the upper limit value (p2920, p2921).

Index: [0] = First coordinate
[1] = Second coordinate

p2924[0...1] Characteristic measurement wait time / Char t_wait

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [ms]	1000000 [ms]	10 [ms]

Description: Wait time until a measured value has been taken and a setpoint is set.

Index: [0] = First coordinate
[1] = Second coordinate

Note: For p2910 = 1 and p2911 = 4, the following applies:
The parameters are automatically preassigned when the measurement is activated. Changes, that were made before the activation, are overwritten.

p2925[0...1] Characteristic measurement cool-down time / Char t_cool

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	1000000 [ms]	10 [ms]

Description: Wait time at the end of a measuring period, option of cooling down.

Index: [0] = First coordinate
[1] = Second coordinate

p2926[0...1] CO: Characteristic measurement setpoint / Char meas set

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-10000.00 [%]	10000.00 [%]	0.00 [%]

Description: Sets the connector output for the characteristic measurement.

Index: [0] = First coordinate
[1] = Second coordinate

Dependency: For p2910 = 1:
- the connection is automatically established when making the measurement.

Note: The value can be used to interconnect a scaling function (e.g. scaling the main setpoint).

p2927[0...1] Characteristic measurement speed / Char n

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [%]	150 [%]	[0] 60 [%] [1] 5 [%]

Description: Speed value as a percentage at which point the characteristic is measured.
Index 1 specifies the tolerance threshold.

Index: [0] = Measuring speed
[1] = Speed tolerance

r2928 Characteristic measurement progress display / Char progress

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [%]	- [%]	- [%]

Description: Displays the progress as a percentage when measuring the characteristics.
Characteristic measurement is activated using p2911.

Dependency: See also: p2911

p2930[0...n] CO: Fixed value M [Nm] / Fixed value M [Nm]

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 1021
	P group: Setpoints	**Unit group:** 7_1	**Unit selection:** p0505
	Not for motor type: REL	**Scaling:** p2003	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-100000.00 [Nm]	100000.00 [Nm]	0.00 [Nm]

Description: Setting and connector output for a fixed torque value.
Dependency: See also: p2900, p2901, r2902
Notice: A BICO interconnection to a parameter that belongs to a drive data set always acts on the effective data set.
Note: The value can, for example, be used to interconnect a supplementary torque.

r2969[0...6] Flux model value display / Psi_mod val disp

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the values of the direct access flux model for the synchronous reluctance motor (RESM) for diagnostic purposes.
Valid values are only displayed when the pulses are inhibited.
For index [0]:
Displays the entered direct axis current id in Arms:
For index [1, 2, 3]:
Displays the saturation curves of the direct axis flux psid(id, iq):
- r2969[1]: flux in Vsrms with respect to the direct axis current for iq = 0
- r2969[2]: flux in Vsrms with respect to the direct axis current for iq = 0.5 * p2950
- r2969[3]: flux in Vsrms with respect to the direct axis current for iq = p2950
For index [4, 5, 6]:
Displays the relative error of the current inversion (id(psid, iq) - id) / p2950:
- r2969[4]: error with respect to direct axis current for iq = 0
- r2969[5]: error with respect to direct axis current for iq = 0.5 * p2950
- r2969[6]: error with respect to direct axis current for iq = p2950

Index: [0] = d-current
[1] = d-flux iq0
[2] = d-flux iq1
[3] = d-flux iq2
[4] = d-current error iq0
[5] = d-current error iq1
[6] = d-current error iq2

Note: RESM: reluctance synchronous motor (synchronous reluctance motor)

p3100 RTC time stamp mode / RTC t_stamp mode

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	2	2

Description: Sets the mode for the time stamp

Value:
0: Operating hours
1: UTC format
2: Operating hours + 01.01.2000

Notice:
For p3100 = 1:
The system prevents this setting from being changed. The parameter can only be influenced after "Set factory setting" or with a "Project download".

Note:
RTC: Real-time clock
UTC: Universal Time Coordinates
For p3100 = 1:
Time of day synchronization is only possible with this setting.
The UTC time started, according to the definition on 01.01.1970 at 00:00:00 and is output in days and milliseconds.

p3101[0...1] Setting UTC time / Set UTC time

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	4294967295	0

Description:
Setting the UTC time.
This means that the drive system is synchronized to the time specified by the time master.
To start p3101[1] must be written to followed by p3101[0]. After writing to p3101[0], the UTC time is accepted.

Index:
[0] = Milliseconds
[1] = Days

Dependency:
See also: p3100

r3102[0...1] Displaying UTC time / Display UTC time

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description:
Displaying the current UTC time.

Index:
[0] = Milliseconds
[1] = Days

Dependency:
See also: p3100

Notice:
The time display depends on the selected mode (p3100).

p3103 UTC synchronization process / UTC sync_process

CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	3	0

Description:
Setting the synchronization process.

Value:
0: PING/SNAP
1: Reserved
2: Parameter
3: Reserved

Dependency:
See also: p3101, p3104

Note: For p3103 = 0:
The PING/SNAP technique allows the UTC time to be set with a high degree of accuracy using p3104 and p3101.
See the SINAMICS S120 Function Manual Drive Functions for more information.
For p3103 = 2:
Simply setting the UTC time via p3101.
For p3103 = 4:
Only for CU3x0-2 PN X150.
Synchronization via Network Time Protocol (NTP).

p3103 UTC synchronization process / UTC sync_process

CU_G130_PN, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	99	0

Description: Setting the synchronization process.

Value:
0: PING/SNAP
1: Reserved
2: Parameter
3: Reserved
4: Network Time Protocol
99: No synchronization

Dependency: See also: p3101, p3104

Note: For p3103 = 0:
The PING/SNAP technique allows the UTC time to be set with a high degree of accuracy using p3104 and p3101.
See the SINAMICS S120 Function Manual Drive Functions for more information.
For p3103 = 2:
Simply setting the UTC time via p3101.
For p3103 = 4:
Only for CU3x0-2 PN X150.
Synchronization via Network Time Protocol (NTP).

p3104 BI: UTC PING synchronization / UTC PING sync

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for the PING event to set the UTC time.

Notice: The parameter may be protected as a result of p0922 or p2079 and cannot be changed.

p3105[0...3] NTP server IP address / NTP IP addr

CU_G130_PN, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	255	0

Description: Sets the IP address of the NTP server for time synchronization via Network Time Protocol (NTP).

Dependency: See also: p3103

Note: p3105[0...3] = 0 means:
PROFINET controller is NTP server.

p3106 NTP time zone / Time zone

CU_G130_PN, CU_G150_PN

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	38	14

Description: Sets the local time zone for NTP (Network Time Protocol).

Value:

0: UTC-12 (AOE)
1: UTC-11 (NURT)
2: UTC-10 (HAST)
3: UTC-9:30 (MART)
4: UTC-9 (AKST)
5: UTC-8 (PST)
6: UTC-7 (MST)

r3107[0...3] UTC synchronization time out of tolerance / UTC t_sync out tol

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the last synchronizing event that was out of tolerance.

Index: [0] = Milliseconds after sync
[1] = Days after sync
[2] = Milliseconds before sync
[3] = Days before sync

Dependency: See also: p3109
See also: A01099

Note: For r3107[0, 1]:
Displays the UTC time after synchronization.
For 3107[2, 3]:
Displays the UTC time before synchronization.

r3108[0...1] UTC synchronization deviation / UTC sync_dev

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the absolute value of the last synchronization deviation that was determined.

Index: [0] = Milliseconds
[1] = Days

p3109 UTC synchronization tolerance / UTC sync tol

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	10000 [ms]	100 [ms]

Description: Sets the tolerance for time of day synchronization.
When this tolerance is exceeded, an appropriate alarm is output.

Dependency: See also: A01099

p3110 External fault 3 switch-on delay / Ext fault 3 t_on

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 3

r3113.0...15 CO/BO: NAMUR message bit bar / NAMUR bit bar

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Display and BICO output for the status of the NAMUR message bit bar.
The faults and alarms are assigned to the appropriate signaling/message classes and influence a specific message bit.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Fault converter information electronics/software error	Yes	No	-
01	Network fault	Yes	No	-
02	DC link overvoltage	Yes	No	-
03	Fault drive converter power electronics	Yes	No	-
04	Drive converter overtemperature	Yes	No	-
05	Ground fault	Yes	No	-
06	Motor overload	Yes	No	-
07	Bus error	Yes	No	-
08	External safety-relevant shutdown	Yes	No	-
09	Mot encoder fault	Yes	No	-
10	Error communication internal	Yes	No	-
11	Fault infeed	Yes	No	-
15	Other faults	Yes	No	-

Note:

For bit 00:

Hardware or software malfunction was identified. Carry out a POWER ON of the component involved. If it occurs again, contact Technical Support.

For bit 01:

A line supply fault has occurred (phase failure, voltage level, ...). Check the line supply / fuses. Check the supply voltage. Check the wiring.

For bit 02:

The DC link voltage has assumed an inadmissibly high value. Check the dimensioning of the system (line supply, reactor, voltages). Check the infeed settings.

For bit 03:

An inadmissible operating state of the power electronics was identified (overcurrent, overtemperature, IGBT failure, ...). Check that the permissible load cycles are maintained. Check the ambient temperatures (fan).

For bit 04:

The temperature in the component has exceeded the highest permissible limit. Check the ambient temperature / control cabinet cooling.

For bit 05:

A ground fault / inter-phase short-circuit was detected in the power cables or in the motor windings. Check the power cables (connection). Check the motor.

For bit 06:

The motor was operated outside the permissible limits (temperature, current, torque, ...). Check the load cycles and limits that have been set. Check the ambient temperature / motor cooling.

For bit 07:

The communication to the higher-level control system (internal coupling, PROFIBUS, PROFINET, ...) is either faulted or interrupted. Check the state of the higher-level control system. Check the communication connection/wiring. Check the bus configuration / clock cycles.

For bit 08:

A safety operation monitoring function (Safety) has detected an error.

For bit 09:

When evaluating the encoder signals (track signals, zero marks, absolute values, ...) an illegal signal state was detected. Check the encoder / state of the encoder signals. Observe the maximum frequencies.

For bit 10:

The internal communication between the SINAMICS components is faulted or interrupted. Check the DRIVE-CLiQ wiring. Ensure an EMC-compliant design. Observe the maximum permissible quantity structure / clock cycles.

For bit 11:

The infeed is faulted or has failed. Check the infeed and the surroundings (line supply, filter, reactors, fuses, ...). Check the closed-loop infeed control.

For bit 15:

Group fault. Determine the precise cause of the fault using the commissioning tool.

r3114.9...11 CO/BO: Messages status word global / Msg ZSW global

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the global status word for messages.

The appropriate bit is set if at least one message is present at the drive objects.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
09	Group alarm present	Yes	No	8065
10	Group fault present	Yes	No	8060
11	Safety group message present	Yes	No	-

Note: The status bits are displayed with delay.

r3115[0...63] Fault drive object initiating / Flt DO initiating

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dyn. index:** -	**Function diagram:** 8050, 8060
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the drive object number of the initiating drive object for this fault as integer number.
Value = 63:
The fault was initiated by the drive object itself.

Dependency: See also: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3120, r3122

Notice: The values of this parameter are only saved in a volatile fashion and are lost when switching off or for a warm restart.

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.

p3116 BI: Suppress automatic acknowledgment / Ackn suppress

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the automatic acknowledgment of Control Unit faults.
BI: p3116 = 0 signal
Acknowledgeable faults are automatically acknowledged on the Control Unit.
Control Unit faults with LOCAL propagation are passed on to the first active drive object.
BI: p3116 = 1 signal
Acknowledgeable faults are not automatically acknowledged on the Control Unit.
Control Unit faults with LOCAL propagation are not passed on.

Dependency: See also: p2102, p2103, p2104, p2105, p3981

Note: When selecting a standard telegram, the BICO interconnection for control signal STW1.10 (master control by PLC) is automatically established.

p3117 Change safety message type / Chg SI msg type

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP	**Can be changed:** C1(1)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Sets the re-parameterization of all safety messages for faults and alarms.
The relevant message type during changeover is selected by the firmware.
0: Safety messages are not re-parameterized
1: Safety messages are re-parameterized

Note: A change only becomes effective after a POWER ON.

r3120[0...63] Component fault / Comp fault

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the component of the fault which has occurred.

Dependency: See also: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3122

Note: Value = 0: Assignment to a component not possible.
The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.

r3121[0...63] Component alarm / Comp alarm

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 8065
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the component of the alarm which has occurred.

Dependency: See also: r2110, r2122, r2123, r2124, r2125, r2134, r2145, r2146, r3123

Note: Value = 0: Assignment to a component not possible.
The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.

r3122[0...63] Diagnostic attribute fault / Diag_attr fault

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the diagnostic attribute of the fault which has occurred.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Hardware replacement recommended	Yes	No	-
15	Message has gone	Yes	No	-
16	PROFIdrive fault class bit 0	High	Low	-
17	PROFIdrive fault class bit 1	High	Low	-
18	PROFIdrive fault class bit 2	High	Low	-
19	PROFIdrive fault class bit 3	High	Low	-
20	PROFIdrive fault class bit 4	High	Low	-

Dependency: See also: r0945, r0947, r0948, r0949, r2109, r2130, r2133, r2136, r3120

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the fault buffer and the assignment of the indices is shown in r0945.
For bits 20 ... 16:
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 0 --> PROFIdrive message class 0: not assigned
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 1 --> PROFIdrive message class 1: hardware fault/software error
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 1, 0 --> PROFIdrive message class 2: line fault
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 1, 1 --> PROFIdrive message class 3: supply voltage fault
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 0, 0 --> PROFIdrive message class 4: DC link fault
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 0, 1 --> PROFIdrive message class 5: power electronics faulted
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 0 --> PROFIdrive message class 6: overtemperature electronic components
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 1 --> PROFIdrive message class 7: ground fault/phase fault detected
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 0 --> PROFIdrive message class 8: motor overload
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 1 --> PROFIdrive message class 9: communication error to the higher-level control
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 0 --> PROFIdrive message class 10: safe monitoring channel has identified an error
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 1 --> PROFIdrive message class 11: incorrect position actual value/speed actual value or not available
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 12: internal (DRIVE-CLiQ) communication error
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 1 --> PROFIdrive message class 13: infeed unit faulted
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 0 --> PROFIdrive message class 14: braking controller/Braking Module faulted
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 1 --> PROFIdrive message class 15: line filter faulted
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 0 --> PROFIdrive message class 16: external measured value/signal state outside the permissible range
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 1 --> PROFIdrive message class 17: application/technology function faulted
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 0 --> PROFIdrive message class 18: error in the parameterization/configuration/commissioning sequence
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 1 --> PROFIdrive message class 19: general drive fault
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 20: auxiliary unit faulted

r3123[0...63] Diagnostic attribute alarm / Diag_attr alarm

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 8065
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the diagnostic attribute of the alarm which has occurred.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Hardware replacement recommended	Yes	No	-
11	Alarm class bit 0	High	Low	-
12	Alarm class bit 1	High	Low	-
13	Maintenance required	Yes	No	-
14	Maintenance urgently required	Yes	No	-
15	Message has gone	Yes	No	-
16	PROFIdrive fault class bit 0	High	Low	-
17	PROFIdrive fault class bit 1	High	Low	-
18	PROFIdrive fault class bit 2	High	Low	-
19	PROFIdrive fault class bit 3	High	Low	-
20	PROFIdrive fault class bit 4	High	Low	-

Dependency: See also: r2110, r2122, r2123, r2124, r2125, r2134, r2145, r2146, r3121

Note: The buffer parameters are cyclically updated in the background (refer to status signal in r2139).
The structure of the alarm buffer and the assignment of the indices is shown in r2122.
For bit 12, 11:
These status bits are used for the classification of internal alarm classes and are intended for diagnostic purposes only on certain automation systems with integrated SINAMICS functionality.
For bits 20 ... 16:
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 0 --> PROFIdrive message class 0: not assigned
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 0, 1 --> PROFIdrive message class 1: hardware fault/software error
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 1, 0 --> PROFIdrive message class 2: line fault
Bits 20, 19, 18, 17, 16 = 0, 0, 0, 1, 1 --> PROFIdrive message class 3: supply voltage fault
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 0, 0 --> PROFIdrive message class 4: DC link fault
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 0, 1 --> PROFIdrive message class 5: power electronics faulted
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 0 --> PROFIdrive message class 6: overtemperature electronic components
Bits 20, 19, 18, 17, 16 = 0, 0, 1, 1, 1 --> PROFIdrive message class 7: ground fault/phase fault detected
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 0 --> PROFIdrive message class 8: motor overload
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 0, 1 --> PROFIdrive message class 9: communication error to the higher-level control
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 0 --> PROFIdrive message class 10: safe monitoring channel has identified an error
Bits 20, 19, 18, 17, 16 = 0, 1, 0, 1, 1 --> PROFIdrive message class 11: incorrect position actual value/speed actual value or not available
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 12: internal (DRIVE-CLiQ) communication error
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 1 --> PROFIdrive message class 13: infeed unit faulted
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 0 --> PROFIdrive message class 14: braking controller/Braking Module faulted
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 1, 1 --> PROFIdrive message class 15: line filter faulted
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 0 --> PROFIdrive message class 16: external measured value/signal state outside the permissible range
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 0, 1 --> PROFIdrive message class 17: application/technology function faulted
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 0 --> PROFIdrive message class 18: error in the parameterization/configuration/commissioning sequence
Bits 20, 19, 18, 17, 16 = 1, 0, 0, 1, 1 --> PROFIdrive message class 19: general drive fault
Bits 20, 19, 18, 17, 16 = 0, 1, 1, 0, 0 --> PROFIdrive message class 20: auxiliary unit faulted

r3131 CO: Actual fault value / Act fault val

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dyn. index:** -	**Function diagram:** 8060
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the fault value of the oldest active fault.
Dependency: See also: r2131, r3132

r3132 CO: Actual component number / Comp_no act

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dyn. index:** -	**Function diagram:** 8060
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the component number of the oldest fault that is still active.
Dependency: See also: r2131, r3131

p3135 Suppress active fault / Supp act flt

VECTOR_G, B_INF

Can be changed: U, T | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** 8060
P group: Messages | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	0000 0000 0000 0000 bin

Description: Sets the suppression of r2139.3 "Fault present" for certain fault responses.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
08	Suppression of fault response ENCODER	ON	OFF	-
10	Suppression of fault response NONE	ON	OFF	-

Dependency: See also: p0491, r2139

Note: Depending on the suppression of a fault reaction in this parameter, r2139.1 "Acknowledgment required" is set when at least one fault occurs.

For bit 08:

The suppression is only effective if p0491 = 1.

p3201[0...n] Excitation current outside the tolerance threshold value / I_exc n Tol thr

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: Messages | **Unit group:** - | **Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.1 [%]	100.0 [%]	10.0 [%]

Description: Sets the threshold value for the "excitation current outside tolerance" message for the excitation current monitoring.

If the absolute value of the difference between the excitation current setpoint and actual value (r1641 - r1626) exceeds the threshold value and the hysteresis is longer than the selected delay time, then fault F07913 is output.

This fault is withdrawn when the threshold voltage is undershot.

Dependency: See also: r1626, r1641, p3202, p3203

See also: F07913

Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).

p3202[0...n] Excitation current outside the tolerance hysteresis / I_exc n Tol hyst

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: Messages | **Unit group:** - | **Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.1 [%]	100.0 [%]	10.0 [%]

Description: Sets the hysteresis for the "excitation current outside tolerance" message for the excitation current monitoring.

Dependency: See also: p3201, p3203

See also: F07913

Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).

p3203[0...n] Excitation current outside the tolerance delay time / I_exc n Tol t_del

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: Messages | **Unit group:** - | **Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.0 [s]	10.0 [s]	1.0 [s]

Description: Sets the delay time for the "excitation current outside tolerance" message for the excitation current monitoring.
Dependency: See also: p3201, p3202
See also: F07913
Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).

p3204[0...n] Flux outside the tolerance threshold value / Flux n tol thr

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: Messages | **Unit group:** - | **Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.1 [%]	100.0 [%]	10.0 [%]

Description: Sets the threshold value for the "flux outside the tolerance" message for the flux monitoring.
If the absolute value of the difference between the flux setpoint and actual value (r0083 - r0084) falls below the threshold value with hysteresis longer than the selected delay time, then fault F07914 is output.
This fault is withdrawn when the threshold voltage is undershot.
Dependency: See also: r0083, r0084, p3205, p3206
See also: F07914
Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).
The flux monitoring is only active after magnetizing (r0056.4 = 1).

p3205[0...n] Flux outside the tolerance hysteresis / Flux n tol hyst

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: Messages | **Unit group:** - | **Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.1 [%]	50.0 [%]	10.0 [%]

Description: Sets the hysteresis for the "flux outside tolerance" message for the flux monitoring.
Dependency: See also: p3204, p3206
See also: F07914
Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).
The flux monitoring is only active after magnetizing (r0056.4 = 1).

p3206[0...n] Flux outside tolerance delay time / Flux n tol t_del

VECTOR_G

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: FloatingPoint32 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: Messages | **Unit group:** - | **Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0.0 [s]	10.0 [s]	5.0 [s]

Description: Sets the delay time for the "flux outside tolerance" message for the flux monitoring.

Dependency: See also: p3204, p3205
See also: F07914
Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).
The flux monitoring is only active after magnetizing (r0056.4 = 1).

p3207[0...n] Zero current signal threshold value / I_0_sig thr

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Messages	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.01 [Arms]	10000.00 [Arms]	1.00 [Arms]

Description: Sets the threshold value for the zero current signal for the zero current monitoring.
If the absolute current falls below the threshold value then r2199.6 is set to 1 after the delay time has expired. The bit is reset if the threshold value and the hysteresis are exceeded again.
Dependency: See also: r2199, p3208, p3209
Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).
The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).

p3208[0...n] Zero current signal hysteresis / I_0_sig hyst

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Messages	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.01 [Arms]	10000.00 [Arms]	1.00 [Arms]

Description: Sets the hysteresis for the zero current signal for the zero current monitoring.
Dependency: See also: p3207, p3209
Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).
The monitoring is only carried out for speeds less than the speed threshold value in p2161 (r2199.0 = 1).

p3209[0...n] Zero current signal delay time / I_0_sig t_del

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [s]	10.00 [s]	0.02 [s]

Description: Sets the delay time for the zero current signal for the zero current monitoring.
Dependency: See also: p3207, p3208
Note: The monitoring function is only carried out for separately excited synchronized motors (p0300 = 5).
The monitoring is only carried out for speeds less than the speed threshold in p2161 (r2199.0 = 1).

p3233[0...n] Torque actual value filter time constant / M_act_filt Tc

VECTOR_G (Ext msg)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8013
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	1000000 [ms]	0 [ms]

Description: Sets the time constant for the PT1 element to smooth the torque actual value.
The smoothed torque actual value is compared with the threshold values and is only used for messages and signals.

p3235 Phase failure signal motor monitoring time / Ph_fail t_mon

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0 [ms]	2000 [ms]	320 [ms]

Description: Sets the monitoring time for phase failure detection of the motor.

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: Monitoring is only effective for blocksize and booksize power units.
For p3235 = 0 the function is deactivated.
For VECTOR, the following applies:
The monitoring is automatically deactivated during a flying restart for a motor that is still rotating.

p3236[0...n] Speed threshold value 7 / n_thr val 7

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8012
P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	3000.00 [rpm]	100.00 [rpm]

Description: Sets the speed threshold value for the signal "speed deviation model/external in tolerance" (BO: r2199.7).

Dependency: See also: r1443, r2169, r2199, p3237

p3237[0...n] Hysteresis speed 7 / n_hysteresis 7

VECTOR_G

Can be changed: U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8012
P group: Messages	**Unit group:** 3_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [rpm]	200.00 [rpm]	2.00 [rpm]

Description: Sets the hysteresis speed for the signal "speed deviation model/external" (BO: r2199.7).

Dependency: See also: r2199, p3236

p3238[0...n] OFF-delay n_act_motor model = n_act external / t_del n_a = n_ext

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8012
	P group: Messages	**Unit group:** -	**Unit selection:** -
	Not for motor type: REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [s]	100.0 [s]	3.0 [s]

Description: Sets the OFF-delay for the signal "speed deviation model/external in tolerance" (BO: r2199.7).
The smoothed actual speed of the motor model r2169 is compared with the externally measured speed r1443 (threshold value p3236).

Dependency: See also: p3236, p3237

p3240[0...n] CI: I2t input value signal source / I2t inp_val s_s

VECTOR_G (Ext msg)	**Can be changed:** T	**Calculated:** -	**Access level:** 4
	Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 8022
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for the input value of the freely parameterizable I2t monitoring.

Dependency: See also: p3241, p3242, p3243, r3244
See also: A07823, F07824

Notice: To activate the freely parameterizable I2t monitoring, the following applies:
- the function module "Extended messages/monitoring" must be activated (r0108.17 = 1).
- the maximum duration must be set greater than zero (p3242 > 0).

Note: Application example:
Excitation current monitoring for the separately excited synchronous motor.

p3241[0...n] Permissible I2t continuous value / Perm I2t cont val

VECTOR_G (Ext msg)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8022
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	10.00 [%]	200.00 [%]	100.00 [%]

Description: Sets the permissible continuous value of the freely parameterizable I2t monitoring.
The integrator value in r3244 decreases if the value received via connector input p3240 is higher than the value set in p3241.
The integrator value in r3244 increases if the value received via connector input p3240 is less than the value set in p3241.

Dependency: See also: p3240, p3242, p3243, r3244
See also: A07823, F07824

p3242[0...n] I2t maximum duration / I2t max_dur

VECTOR_G (Ext msg)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8022
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [s]	3600.00 [s]	0.00 [s]

Description: Sets the maximum duration for 100 % overload (corresponding to p3241 + 100 %) of the freely parameterizable I2t monitoring.

Setting example:

Operation should be possible at 150 % of the input quantity for a duration of 3 s for a permissible continuous value p3241 = 110 %.

As a consequence, the following settings value is obtained:

p3242 = ((150 x 150 - 110 x 110) / ((100 + 110) x (100 + 110) - 110 x 110) x 3 s = 0.975 s

Dependency: See also: p3240, p3241, p3243, r3244

See also: A07823, F07824

Notice: For p3242 = 0, the freely parameterizable I2t monitoring is deactivated.

Note: After this time expires for 100 % overload, fault F07824 is output and status bit r2199.14 is set.

For lower overload conditions, the permissible duration extends corresponding to the specified setting example.

p3243[0...n] I2t alarm threshold / I2t alarm thr

VECTOR_G (Ext msg)	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 8022
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [%]	99.90 [%]	50.00 [%]

Description: Sets the alarm threshold for the I2t integrator value (r3244) scaled to 100 %.

When the alarm threshold is reached, alarm A07823 is output and status bit r2199.13 is set.

Dependency: See also: p3240, p3241, p3242, r3244

See also: A07823

r3244 CO: Actual I2t integrator value / Act I2t integ_val

VECTOR_G (Ext msg)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8022
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, PMSM, REL, RESM	**Scaling:** PERCENT	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [%]	- [%]	- [%]

Description: Display and connector output for the actual integrator value of the freely parameterizable I2t monitoring.

The value is scaled, so that the maximum permissible overload is reached at 100 %.

Dependency: See also: p3240, p3241, p3242, p3243

r3313 Efficiency optimization 2 optimum flux / Optimum flux

VECTOR_G (n/M)

Can be changed: -
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dyn. index: -
Function diagram: 6722, 6837
P group: Displays, signals
Unit group: -
Unit selection: -
Not for motor type: PMSM, SESM, REL, RESM
Scaling: r2004
Expert list: 1
Min: - [%]
Max: - [%]
Factory setting: - [%]

Description: Displays the calculated, optimum flux.
Dependency: See also: p1401, p3315, p3316
Note: The function is activated via p1401.14 = 1.

p3315[0...n] Efficiency optimization 2 minimum flux limit value / Min flux lim val

VECTOR_G (n/M)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dyn. index: DDS, p0180
Function diagram: 6722, 6837
P group: Closed-loop control
Unit group: -
Unit selection: -
Not for motor type: PMSM, SESM, REL, RESM
Scaling: -
Expert list: 1
Min: 10.0 [%]
Max: 200.0 [%]
Factory setting: 50.0 [%]

Description: Sets the minimal limit value for the calculated optimum flux.
Dependency: See also: p1401, r3313, p3316
Note: The function is activated via p1401.14 = 1.

p3316[0...n] Efficiency optimization 2 maximum flux limit value / Max flux lim val

VECTOR_G (n/M)

Can be changed: U, T
Calculated: -
Access level: 3
Data type: FloatingPoint32
Dyn. index: DDS, p0180
Function diagram: 6722, 6837
P group: Closed-loop control
Unit group: -
Unit selection: -
Not for motor type: PMSM, SESM, REL, RESM
Scaling: -
Expert list: 1
Min: 10.0 [%]
Max: 200.0 [%]
Factory setting: 110.0 [%]

Description: Sets the maximum limit value for the calculated optimum flux.
Dependency: See also: p1401, r3313, p3315
Note: The function is activated via p1401.14 = 1.

p3320[0...n] Fluid flow machine power point 1 / Fluid_mach P1

VECTOR_G

Can be changed: U, T
Calculated: -
Access level: 2
Data type: FloatingPoint32
Dyn. index: DDS, p0180
Function diagram: -
P group: Displays, signals
Unit group: -
Unit selection: -
Not for motor type: -
Scaling: -
Expert list: 1
Min: 0.00
Max: 100.00
Factory setting: 25.00

Description: For the energy-saving display of a fluid-flow machine, a typical flow characteristic P = f(n) with 5 points along the characteristic is required.
This parameter specifies the power (P) of point 1 as a [%].
The characteristic comprises the following value pairs:
Power (P) / speed (n)
p3320 / p3321 --> point 1 (P1 / n1)
p3322 / p3323 --> point 2 (P2 / n2)
p3324 / p3325 --> point 3 (P3 / n3)
p3326 / p3327 --> point 4 (P4 / n4)
p3328 / p3329 --> point 5 (P5 / n5)

Dependency: See also: r0041, p3321, p3322, p3323, p3324, p3325, p3326, p3327, p3328, p3329
Note: The reference value for power and speed is the rated power/rated speed.
The energy saved is displayed in r0041.

p3321[0...n] Fluid flow machine speed point 1 / Fluid_mach n1

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00	100.00	0.00

Description: For the energy-saving display of a fluid-flow machine, a typical flow characteristic P = f(n) with 5 points along the characteristic is required.
This parameter specifies the speed (n) of point 1 as a [%].
The characteristic comprises the following value pairs:
Power (P) / speed (n)
p3320 / p3321 --> point 1 (P1 / n1)
p3322 / p3323 --> point 2 (P2 / n2)
p3324 / p3325 --> point 3 (P3 / n3)
p3326 / p3327 --> point 4 (P4 / n4)
p3328 / p3329 --> point 5 (P5 / n5)
Dependency: See also: r0041, p3320, p3322, p3323, p3324, p3325, p3326, p3327, p3328, p3329
Note: The reference value for power and speed is the rated power/rated speed.
The energy saved is displayed in r0041.

p3322[0...n] Fluid flow machine power point 2 / Fluid_mach P2

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00	100.00	50.00

Description: For the energy-saving display of a fluid-flow machine, a typical flow characteristic P = f(n) with 5 points along the characteristic is required.
This parameter specifies the power (P) of point 2 as a [%].
Dependency: See also: r0041, p3320, p3321, p3323, p3324, p3325, p3326, p3327, p3328, p3329
Note: The reference value for power and speed is the rated power/rated speed.
The energy saved is displayed in r0041.

p3323[0...n] Fluid flow machine speed point 2 / Fluid_mach n2

VECTOR_G

	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [%]	1000 [%]	100 [%]

Description: Sets the adaptation value at application point 2 of the load current-dependent adapted excitation amplitude of the pulse technique.

Dependency: See also: p1607, p3371, p3372

Note: The active excitation amplitude at application point 2 is (p3373 * p1607).

r3374 CO: Pulse technique excitation actual / Pulse excit actual

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [mVs]	- [mVs]	- [mVs]

Description: Display and connector output for the currently active excitation amplitude of the pulse technique.

Dependency: See also: p1605, p1607, p1750, p3371, p3372, p3373

r3375[0...5] CO: Pulse technique response raw values / PulsTecRespRawVal

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Displays, signals	**Unit group:** 6_5	**Unit selection:** p0505
	Not for motor type: ASM, SESM, REL	**Scaling:** p2002	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [A]	- [A]	- [A]

Description: Displays the signal response raw values to the excitation of the pulse technique.

Index:
[0] = Phase R
[1] = Phase S
[2] = alpha
[3] = beta
[4] = alpha changed
[5] = beta changed

Dependency: See also: p1605, p1607, p1750

r3376[0...2] Pulse technique model parameters / Pulse model

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays the parameters of the pulse model.
Pulse reluctances are displayed in the unit [A / Vs].

Index:
[0] = Pulse reluctance total
[1] = Pulse reluctance difference
[2] = Pulse reluctance cross

r3377[0...2] Pulse technique signals / Pulse signals

VECTOR_G (n/M)	**Can be changed:** -	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
	P group: Displays, signals	**Unit group:** -	**Unit selection:** -
	Not for motor type: ASM, SESM, REL	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays signals of the pulse technique.

Index:
[0] = Offset correction correction component
[1] = Level relationship A priority
[2] = Anisotropy factor

r3402 Infeed status internal BIC / INF status int

B_INF	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** 8932
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	6	-

Description: Displays the internal status of the infeed module.

Value:
0: Initialization
1: Fault
2: No ON command
3: Offset measurement running
4: ON-delay active
5: Precharging running
6: Operation

r3405.1...8 CO/BO: Status word DC link control / ZSW Vdc_ctrl

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the status word of the DC link voltage control.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
01	Vdc controller active	Yes	No	-
08	Vdc controller selected	Yes	No	-

Dependency: See also: A06810

Note: For bit 01:
DC link voltage control is disabled and enabled with p3513.
For bit 08 = 1:
DC link voltage control is selected using p3513.

r3405.7 CO/BO: Infeed status word / Inf ZSW

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the status word of the infeed unit.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
07	DC link undervoltage alarm threshold undershot	Yes	No	-

Dependency: See also: A06810

Note: For bit 07:
When the alarm threshold is fallen below, alarm A06810 is output and r3405.7 is set = 1.
The alarm threshold is obtained from the sum of the undervoltage threshold r0296 and offset p0279. As a consequence, the alarm threshold is only effective for p0279 > 0.
Monitoring only takes place when operational.
The following applies for states r3402 <= 5 and r3402 = 12: r3405.7 = 0.

p3422 DC link capacitance total / C_DC tot

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.20 [mF]	2000.00 [mF]	2.00 [mF]

Description: Sets the total DC link capacitance for closed-loop voltage control.
The capacitance of one power unit is pre-assigned to this value. The value should be adapted according to the number of power units.

Note: The controller setting for the DC link voltage controller is derived from this value.

p3490 Infeed delay time OFF1 command / INF t_del OFF1

B_INF

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8732, 8832, 8932
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [ms]	1000000.0 [ms]	0.0 [ms]

Description: Sets the delay time for the ON/OFF1 command of the infeed.
After ON/OFF1 = 0 the infeed remains in operation for the specified time

Dependency: See also: p0840

Notice: The ON/OFF1 command of the infeed can be interrupted.

Note: This parameter is only relevant if a Motor Module and the infeed are controlled by the same OFF command. In this case, the delay time and the stop ramp time of the motor can be coordinated with one another.

p3510 DC link voltage setpoint / Vdc set

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 7960
P group: Closed-loop control	**Unit group:** 5_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
100.00 [V]	1600.00 [V]	600.00 [V]

Description: Sets the setpoint for the DC link voltage on the motor side.

p3511 CI: DC link voltage supplementary setpoint / Vdc Z_set

VECTOR_G (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Function diagram:** 7960
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for the supplementary setpoint for the DC link voltage on the motor side.

Dependency: See also: p3510

p3513 BI: Voltage-controlled operation inhibit / U_ctrl op inhib

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 7960
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	1

Description: Sets the signal source for disabling DC link voltage control on the motor side.

r3517 CO: DC link controller active current setpoint / Vdc I_act set

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 6220, 7960
P group: Closed-loop control	**Unit group:** 6_2	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [Arms]	- [Arms]	- [Arms]

Description: Display and connector output for the unlimited setpoint of the active current controller of the DC link voltage control on the motor side.

p3519[0...3] CI: DC link precontrol power (scaled) / Vdc prectrl P scal

VECTOR_G (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** r2004	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for power precontrol.

Dependency: See also: p3521

Note: Closed-loop control of the DC link voltage is improved by precontrolling the power required for the other components.
A scaled quantity is expected so that the various power reference values (r2004) of the drive objects must be taken into account. The scaling factors are used to adapt the scaling (p3521).

p3520[0...3] CI: DC link precontrol power (not scaled) / Vdc prectrl P

VECTOR_G (Tech_ctrl)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** -	**Function diagram:** 7960
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for power precontrol.

Dependency: See also: p3521

Note: Closed-loop control of the DC link voltage is improved by precontrolling the power required for the other modules.
A non-scaled quantity is expected so that the various power reference values (r2004) of the drive objects do not have to be taken into account. The scaling factors are used to adapt the scaling (p3521).

p3521[0...3] DC link precontrol power scaling / Vdc prectrl P scal

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 7960
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-100000.00000 [%]	100000.00000 [%]	100.00000 [%]

Description: Sets the scaling factor for the power precontrol.

Dependency: See also: p3520

Note: The scaling factor acts on the sum of the associated indices of p3519 and p3520. As one BICO input is scaled (p3519) and the other is not scaled (p3520), for each index, only one of the two inputs should ever be assigned.

r3522[0...4] CO: DC link voltage control precontrol display / Vdc_ctr prectr dis

VECTOR_G (Tech_ctrl)

Can be changed: -	**Calculated:** -	**Access level:** 4

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.01 [%]	1000.00 [%]	100.00 [%]

Description: Sets the scaled proportional gain for the DC link voltage controller (Vdc controller).
Note: A value of 100% corresponds to the basic setting derived from the loop control parameter (p3422).

p3562 Vdc controller integral time / Vdc_ctrl Tn

VECTOR_G (Tech_ctrl)

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 7960
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.10 [%]	100000.00 [%]	100.00 [%]

Description: Sets the scaled integral time for the DC link voltage controller (Vdc).
Note: A value of 100% corresponds to the basic setting derived from the loop control parameter (p3422).

p3660[0...n] VSM input line voltage voltage scaler / VSM inp U_scaler

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** 9880
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** PERCENT	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [%]	100000.00 [%]	0.00 [%]

Description: Sets the voltage scaler for the Voltage Sensing Module (VSM).

Note: When the 690 V input is used (X522) without voltage scaler, 0 % should be entered.
When the 100 V input (X521) is used with voltage scaler to measure medium voltages, the dividing (scaling) factor multiplied by 100% should be entered.
Example:
1000 V line voltage, voltage scaling, 10:1
--> voltage at the VSM input is 100 V
--> p3660 = 10 * 100 % = 1000 %

r3661[0...n] CO: VSM input line voltage u1 - u2 / VSM inp u1-u2

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** -
P group: Closed-loop control	**Unit group:** 5_3	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [V]	- [V]	- [V]

Description: Displays the input voltage between phases L1 and L2 for the Voltage Sensing Module (VSM).
Dependency: See also: p3660
Note: X521.1 or X522.1: Connection of L1
X521.2 or X522.2: Connection of L2
X521.3 or X522.3: Connection of L3

r3662[0...n] CO: VSM input line voltage u2 - u3 / VSM inp u2-u3

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** -

Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [V]	- [V]	- [V]

Description: Displays the input voltage between phases L2 and L3 for the Voltage Sensing Module (VSM).
Dependency: See also: p3660
Note: X521.1 or X522.1: Connection of L1
X521.2 or X522.2: Connection of L2
X521.3 or X522.3: Connection of L3

r3664[0...n] CO: VSM temperature evaluation status / VSM temp status

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** p0150	**Function diagram:** 9886
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the status of the temperature evaluation using the Voltage Sensing Module (VSM).
This displays whether the temperature actual value has exceeded the alarm/fault threshold.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Alarm is present	Yes	No	-
01	Fault is present	Yes	No	-

Dependency: See also: p3665, r3666, p3667, p3668

p3665[0...n] VSM temperature evaluation sensor type / VSM temp sens type

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** p0150	**Function diagram:** 9886
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	6	0

Description: Sets the temperature sensor for the Voltage Sensing Module (VSM).
The temperature sensor is connected to terminals X520.5 and X520.6 of the VSM.

Value:
0: No sensor
1: PTC
2: KTY84
6: PT1000

r3666[0...n] CO: VSM temperature actual value / VSM Temp_ActV

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** 9886
P group: Closed-loop control	**Unit group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [°C]	- [°C]	- [°C]

Description: Display and connector output for the temperature actual value of a temperature sensor connected to a Voltage Sensing Module (VSM).
Prerequisite:
A KTY/ PT1000 temperature sensor is connected, and correspondingly 3665 is set = 2, 6.

Dependency: See also: p3665
See also: F34207, A34211

Note: If value r3666 exceeds threshold value p3667 or p3668, then alarm A34211 or fault F34207 is output.
For sensor type PTC (p3665 = 1), the following applies:
- below the nominal response temperature, r3666 = -50°C.
- above the nominal response temperature, r3666 = 250 °C.

p3667[0...n] VSM overtemperature alarm threshold / VSM T A thr

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** 9886
P group: -	**Unit group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-100.00 [°C]	301.00 [°C]	150.00 [°C]

Description: Sets the alarm threshold for the temperature sensor on the Voltage Sensing Module (VSM).
Prerequisite:
A KTY/PT1000 temperature sensor is connected, and correspondingly p3665 is set = 2, 6.

Dependency: See also: p3665
See also: A34211

Note: For sensor type KTY (p3665 = 2) or PT1000 (p3665 = 6), values 181 ... 300 °C result in fault F06255.
The monitoring is deactivated for p3667 = 301.

p3668[0...n] VSM overtemperature shutdown threshold / VSM T F_thr

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** 9886
	P group: -	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-100.00 [°C]	301.00 [°C]	180.00 [°C]

Description: Sets the shutdown threshold for the temperature sensor of the VSM.
Prerequisite:
A KTY/PT1000 temperature sensor is connected, and correspondingly p3665 is set = 2, 6.

Dependency: See also: p3665, p3667
See also: F35207

Note: For sensor type KTY/PT1000 (p3665 = 2, 6), values 181 ... 300 °C result in fault F06255.
Other temperature limits (see F06255) are applicable for liquid-cooled Active Interface Modules (AIM).
The monitoring is deactivated for p3668 = 301.

p3669[0...n] VSM overtemperature hysteresis / VSM T hyst

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** 9886
	P group: -	**Unit group:** 21_2	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1.00 [K]	50.00 [K]	3.00 [K]

Description: Sets the hysteresis for the alarm threshold/fault threshold of the Voltage Sensing Module (VSM).

Dependency: See also: p3667

p3670[0...n] VSM 10 V input CT gain / VSM CT_gain

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** 9880
	P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [A]	1000.000 [A]	1.000 [A]

Description: Sets CT gain of the CT connected at the 10 V input of the Voltage Sensing Module (VSM).
The parameter specifies the current magnitude in [A] referred to the input voltage at the VSM in [V].
Example:
CT with 1 V per 200 A.
--> p3670 = 200

Dependency: See also: r3671, r3672

Note: The CT for phase 1 is connected at terminals X520.1 and X520.2 of the VSM.
The CT for phase 2 is connected at terminals X520.3 and X520.4 of the VSM.

r3671[0...n] CO: VSM 10 V input CT 1 actual value / VSM CT 1 I_ActV

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** 9880

Not for motor type: -	**Scaling:** p2002	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [A]	- [A]	- [A]

Description: Displays the current actual value from current transducer (CT) 2 at the 10 V input of the Voltage Sensing Module (VSM).

Dependency: See also: p3670

Note: The CT for phase 2 is connected at terminals X520.3 and X520.4 of the VSM.

r3673[0...n] CO: VSM 10 V input 1 actual value / VSM inp 1 U_ActV

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** 9880
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [V]	- [V]	- [V]

Description: Displays the actual value of the voltage measured at the 10 V input 1 of the Voltage Sensing Module (VSM).

Dependency: See also: p3670

Note: 10 V input 1: Terminals X520.1 and X520.2

r3674[0...n] CO: VSM 10 V input 2 actual value / VSM inp 2 U_ActV

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** p0150	**Function diagram:** 9880
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
- [V]	- [V]	- [V]

Description: Displays the actual value of the voltage measured at the 10 V input 2 of the Voltage Sensing Module (VSM).

Dependency: See also: p3670

Note: 10 V input 2: Terminals X520.3 and X520.4

p3680 BI: Braking Module internal inhibit / BM int inhib

B_INF

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source to inhibit the internal Braking Module.
BI: p3680 = 1 signal:
The Braking Module is inhibited.
BI: p3680 = 0 signal:
The Braking Module is enabled.

Dependency: See also: A06904

Caution: When the Braking Module is inhibited, no energy can be dissipated in the braking resistor.

p3681 BI: Activating Braking Module internal DC link fast discharge / BM intDCdischg act

B_INF	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to activate the DC link fast discharge for an internal braking module.
When the following conditions apply, the DC link fast discharge is started later with delay time (p3682):
- BI: p3681 = 1 signal.
- an external line contactor is opened via r0863.1 "energize contactor".
The DC link fast discharge is interrupted when the following conditions apply:
- BI: p3681 = 0 signal.
- ON command for the infeed.

Recommendation: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults can occur when precharging (e.g. F30027).

Dependency: See also: p3682
See also: F30027

Notice: The parameter is only effective for Basic Line Modules with the internal Braking Module (this is valid for Basic Line Modules with a power rating of less than 100 kW).

p3682 Braking Module internal DC link fast discharge delay time / BM int DC dischg t

B_INF	**Can be changed:** C1(3), T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
	P group: Communications	**Unit group:** -	**Unit selection:** -

P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: The binector output uses a 1 signal to indicate that 80 % of the highest permissible I2t value has been reached in the Braking Module.

Dependency: See also: A06905

r3686 BO: Digital Braking Module fault / Dig BM fault

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: The binector output uses a 1 signal to indicate an overcurrent fault or an I2t shutdown in the Braking Module.

Dependency: See also: F06906

r3687 BO: Digital Braking Module pre-alarm overtemperature / Dig BM A overtemp

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays a fault due to the excessively high temperature.
1 signal:
The connected temperature sensor (X21.1, X21.2) signals an overtemperature.

Recommendation: Measure the braking resistor temperature using the temperature sensor.

r3688 BO: Braking Module internal overtemperature shutdown / BM int temp shutd

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the shutdown due to the excessively high temperature.
1 signal:
The connected temperature sensor (X21.1, X21.2) signals an overtemperature. The highest permissible temperature at the connected temperature sensor has been exceeded and results in a shutdown.

Dependency: See also: F06908

r3689 BO: Digital Braking Module Uce fault / Dig BM Uce fault

B_INF

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays an Uce fault in the internal Braking Module.
1 signal:
An Uce fault is present in the internal Braking Module.

Dependency: See also: F06909

p3800[0...n] Sync-line-drive activation / Sync act

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** DDS, p0180	**Function diagram:** 7020
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Sets the activation for line-drive synchronization

Value:
0: Sync-line-drive deactivated
1: Sync-line-drive activated VSM-INT

Dependency: See also: p3801, p3802

Caution:

If there is only one VSM being used, this can either be used for line synchronization or for a flying restart. If the VSM was connected to the line supply, then flying restart should be deselected in p1200. If the VSM was connected at the output (motor side), then line synchronization should be deactivated using p3800.
Line synchronization (first VSM connected with the line supply) and also flying restart (second VSM connected to the motor terminals) can only be used if two VSMs are assigned to the Motor Module.

Note: When the ground fault monitoring initiates a fault for overlapping synchronizing the threshold value p0287[1] for the Motor Module and the associated infeed must be appropriately increased (e.g. p0287[1] = 100 %).
For p3800 = 1, the following applies:
The INTERNAL voltage actual values are used for synchronization. The effects that a (sine-wave) filter - that is connected between the Motor Module and motor - has on the voltage actual values are taken into account (theoretically) by appropriately selecting p0230.
VSM: Voltage Sensing Module

p3801[0...n] Sync-line-drive drive object number / Sync DO_no

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Function diagram:** 7020
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	62	1

Description: Sets the drive object number of the drive whose VSM is used for line-drive synchronization.

Dependency: See also: p3800, p3802

Notice: The current controller sampling time p0115[0] of the drive object with the VSM used for synchronization must be identical to the current controller sampling time of the drive of the drive used to perform line synchronization.

Note: VSM: Voltage Sensing Module
The setting p3801 = 1 is always possible (no VSM selected).
If the VSM is assigned subsequently to a Motor Module, its drive object number must be entered in p3801.
The line voltage is always measured using the first VSM (p0151[0]).

p3802[0...n] BI: Sync-line-drive enable / Sync enable

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2

	Not for motor type: -	**Scaling:** p2000	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Hz]	- [Hz]	- [Hz]

Description: Displays the correction frequency for the line-drive synchronization.

p3813[0...n] Sync-line-drive phase synchronism threshold value / Sync Ph_sync thr

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 7020
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	1.00 [°]	20.00 [°]	2.00 [°]

Description: Sets the threshold value of the phase synchronism for the line-drive synchronization.

A prerequisite for synchronism is achieved if the phase difference is lower than the threshold value.

Note: Synchronism is reached (r3819.2 = 1), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.

r3814 CO: Sync-line-drive voltage difference / Sync U_diff

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 7020
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** p2001	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [Vrms]	- [Vrms]	- [Vrms]

Description: Display and connector output for the voltage difference between the measured target voltage and output voltage of the gating unit of the closed-loop control for line-drive synchronization.

p3815[0...n] Sync-line-drive voltage difference threshold value / Sync U_diff thr

VECTOR_G	**Can be changed:** U, T	**Calculated:** CALC_MOD_LIM_REF	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 7020
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [%]	20.00 [%]	10.00 [%]

Description: Sets the threshold value of the voltage difference for the line-drive synchronization.

A prerequisite for synchronism is reached if the voltage difference is less than the threshold value.

Note: Synchronism is reached (r3819.2 = 1), if the AND logic operation of the results from the phase measurement (p3813) and voltage measurement (p3815) is fulfilled.

For voltage manipulated quantity margin (reserve) of the drive converter, the amplitude difference (r3814) between the setpoint and actual value is controlled (corrected) to zero.

The parameter is referred to the voltage setpoint amplitude.

p3818[0...n] Sync-line-drive synchronization time limit / Sync time lim

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** -
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0 [s]	900 [s]	60 [s]

Description: Sets the time limit for achieving line-drive synchronism.

Dependency: See also: F07940

Note: For p3818 = 0, the time limit is deactivated.

r3819.0...7 CO/BO: Sync-line-drive status word / Sync ZSW

VECTOR_G

Can be changed: -

Description: The friction characteristic is defined by 10 value pairs.
This parameter specifies the M coordinate of the 10th value pair of the friction characteristic.

Dependency: See also: p3829, p3845

r3840.0...9 CO/BO: Friction characteristic status word / Friction ZSW

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 7010
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the status word of the friction characteristic.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Friction characteristic OK	Yes	No	-
01	Record friction characteristic activated	Yes	No	-
02	Record friction characteristic completed	Yes	No	-
03	Record friction characteristic canceled	Yes	No	-
08	Friction characteristic positive direction	Yes	No	-
09	Friction torque model controlled status	Upper	Lower	-

Note: For bit 09:
For closed-control of an induction motors with encoder, the switchover between the current and observer model is displayed (see also r1751.19), if p3844 is > 0.
For bit 9 = 0 (observer model active), the following applies:
The frictional torque is calculated from the characteristic values from the characteristic point entered into p3844.
For bit 9 = 1 (current model active), the following applies:
The frictional torque is calculated from the characteristic values below the characteristic point entered into p3844.

r3841 CO: Friction characteristic output / Frict outp

VECTOR_G (n/M)

Can be changed: -	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 7010
P group: Functions	**Unit group:** 7_1	**Unit selection:** p0505

Min:	**Max:**	**Factory setting:**
0.00 [ms]	10000.00 [ms]	0.00 [ms]

Description: Sets the smoothing time constant (PT1) for the friction torque difference.
Smoothing is activated when switching over from status bit r3840.9.

Dependency: See also: p3844

p3844[0...n] Friction characteristic number changeover point upper / Frict no chg_pt up

VECTOR_G (n/M)

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: PMSM, SESM, REL, RESM	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	4	0

Description: Selects the upper changeover point of the friction characteristic for the frictional torque input controlled by the motor model of the induction motor.
The speed of this changeover point is pre-assigned when automatically calculating with the changeover speed p1752. The changeover point located below is pre-assigned with the changeover speed p1752 * (1 - p1753).
Example:
p3844 = 3 means that the speed value for the change to the monitor model (p3823 = p1752) is entered into p3823 (friction characteristic value n3).
Depending on the display of r3840.9, the frictional torque is calculated from the friction characteristic values, which are associated with these changeover points. For the changeover of the motor model, with hysteresis, the frictional torque smoothed with p3843 changes between these two states.

Dependency: As part of the automatic calculation (p0340), p3844 is only activated for closed loop control (p1300 = 21, 23) of induction motors with encoder.
See also: p3843

Notice: If the changeover point defined using p3844 does not match the changeover speed p1752, then internally, the model-controlled friction torque input is automatically deactivated (same as for p3844 = 0).

Note: For p3844 = 0, the model-controlled frictional torque changeover is deactivated. The frictional torque is then calculated the same as for the encoderless control by interpolating between the points along the friction characteristic.

p3845 Record friction characteristic activation / Frict record act

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 7010
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	3	0

Description: Setting for the friction characteristic record.

After the next switch-on command, the friction characteristic is automatically recorded.

Value:
0: Record friction characteristic deactivated
1: Record friction characteristic activated all directions
2: Record friction characteristic activated positive direction
3: Record friction characteristic activated negative direction

Dependency: When selecting the friction characteristic measurement, the drive data set changeover is suppressed.

For linear drives (refer to r0108.12) it is not permissible to carry out the friction characteristic measurement for mechanical systems that limit travel.

Danger:

For drives with a mechanical system that limit the distance moved, it must be ensured that during recording, the friction characteristic is not reached. If this is not the case, then it is not permissible that the measurement is carried out.

Notice: To permanently accept the determined settings they must be saved in a non-volatile fashion (p0971, p0977).

Note: When the friction characteristic record is active, it is not possible to save the parameters (p0971, p0977).

When the friction characteristic record is active (p3845 > 0), it is not possible to change p3820 ... p3829, p3830 ... p3839 and p3842.

When recording the friction characteristic, in addition to the friction, the motor losses are also determined (e.g. iron losses, eddy current losses and re-magnetizing losses). A differentiation is not made between these individual loss components. We recommend that a motor temperature sensor is used because torque deviations can also be emulated/mapped on the characteristic due to the thermal influence.

p3846[0...n] Record friction characteristic ramp-up/ramp-down time / Frict rec t_RU/RD

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 7010
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	999999.000 [s]	10.000 [s]

Description: Sets the ramp-up/ramp-down time of the ramp-up/ramp-down function generator to automatically Documenting the friction characteristic.

The drive is accelerated from standstill (setpoint = 0) up to the maximum speed/velocity (p1082) in this time.

Dependency: See also: p3845

p3847[0...n] Record friction characteristic time to warm up / Frict rec t_warm

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 2
Data type: FloatingPoint32	**Dyn. index:** DDS, p0180	**Function diagram:** 7010
P group: Functions	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.000 [s]	3600.000 [s]	0.000 [s]

Description: Sets the warm-up time.

To start the automatic recording, the highest selected speed (p3829) is approached and this time is held. After this, the measurement is started with the highest speed.

Dependency: See also: p3829, p3845

p3848[0...n] CI: Friction characteristic speed actual value signal source / Frict n_act s_s

VECTOR_G (n/M)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / FloatingPoint32	**Dyn. index:** CDS, p0170	**Function diagram:** 7010
P group: Closed-loop control	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** p2000	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	63[0]

Description: Sets the signal source for the speed actual value of the friction characteristic.

Dependency: See also: r1443

Notice: The interconnected signal of the speed actual value must be approximately the same as the real motor speed so that when the motor model is replaced, no significant settling operations occur.

p3860 Number of Braking Modules connected in parallel / BM qty para_cct

B_INF (Brk Mod ext)

Can be changed: C2(2)	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 9951
P group: Converter	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
1	8	1

Description: Sets the number of Braking Modules connected in parallel in a DC link.

Note: The parameter can only be written to if the infeed is in the commissioning mode (p0010 = 2).

r3861.0...7 BO: Braking Module inhibit/acknowledgment / BM inhib/ackn

B_INF (Brk Mod ext)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 9951
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Signal to energize terminal X21.1 "inhibit/acknowledgment" on the Braking Module.

This binector output is used as signal source to interconnect to a digital output.

For "booksize" formats the digital output must be connected to terminal X21.1 and for "chassis" formats the digital output must be connected to terminal X21.3 of the particular Braking Module.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Inhibit/acknowledge Braking Module 1	High	Low	-
01	Inhibit/acknowledge Braking Module 2	High	Low	-
02	Inhibit/acknowledge Braking Module 3	High	Low	-
03	Inhibit/acknowledge Braking Module 4	High	Low	-
04	Inhibit/acknowledge Braking Module 5	High	Low	-
05	Inhibit/acknowledge Braking Module 6	High	Low	-
06	Inhibit/acknowledge Braking Module 7	High	Low	-
07	Inhibit/acknowledge Braking Module 8	High	Low	-

Warning:

It is crucial that you ensure the correct interconnection of binector outputs r3861.n - and/or the wiring of the corresponding digital outputs!

If the interconnections/connections are incorrect, and if the Braking Module develops a fault condition, then the software could execute a different (incorrect) function via binector outputs r3861.n.

p3862 Braking Module DC link fast discharge delay time / BM DC-dischg t_del

B_INF (Brk Mod ext)

Can be changed: C1(3), T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 9951
P group: Communications	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
500 [ms]	4294967295 [ms]	1000 [ms]

Description: Sets the delay time for switching in the DC link fast discharge.

Dependency: See also: p3863, r3864

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3863 BI: Activating Braking Module DC link fast discharge / BM DC-dischg act

B_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 9951
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source to activate the DC link fast discharge.

The DC link fast discharge is started later with delay time (p3862) when the following conditions apply:

- BI: p3863 = 1 signal.
- an external line contactor is opened via r0863.1 "energize contactor".

The DC link fast discharge is interrupted when the following conditions apply:

- BI: p3863 = 0 signal.
- ON command for the infeed.

Recommendation: The DC link fast discharge should be activated if there is an external line contactor and is correctly interconnected (r0863.1, p0860). If the DC link fast discharge is not activated together with an external line contactor, then faults can occur when precharging (e.g. F30027).

Dependency: See also: r3864

See also: F30027

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

r3864.0...7 BO: Braking Module DC link fast discharge / BM DC link dischg

B_INF (Brk Mod ext)

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** 9951
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Signal to control (energize) terminal X21.2 "DC link fast discharge" on the Braking Module.

This binector output is used as signal source to interconnect to a digital output. The digital output must be connected to terminal X21.2 of the particular Braking Module.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Fast discharge Braking Module 1	High	Low	-
01	Fast discharge Braking Module 2	High	Low	-
02	Fast discharge Braking Module 3	High	Low	-
03	Fast discharge Braking Module 4	High	Low	-
04	Fast discharge Braking Module 5	High	Low	-
05	Fast discharge Braking Module 6	High	Low	-
06	Fast discharge Braking Module 7	High	Low	-
07	Fast discharge Braking Module 8	High	Low	-

Dependency: See also: p3863
See also: F30027

Warning: It must be carefully ensured that the binector outputs BO: p3864.n are correctly interconnected and also that the appropriate digital outputs are correctly connected up.
If the interconnection/connection is incorrect, in the case of an active DC link fast discharge, the software could execute another function (incorrect function) via binector outputs BO: p3864.n or could also permanently control the DC link fast discharge even if the line contactor is closed.

Note: The DC link fast discharge is only possible for "booksize" formats. This function is not supported for "chassis" formats.

p3865[0...7] BI: Braking Module pre-alarm I2t shutdown / BM pre-A I2t shutd

B_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 9951
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for the message "Pre-alarm I2t shutdown" of the Braking Module.
BI: p3865[0...7] = 1 signal --> no pre-alarm I2t shutdown
BI: p3865[0...7] = 0 signal --> pre-alarm I2t shutdown (A06901)

Dependency: See also: A06901

Note: For the Braking Module, this message is output via the following terminal:
- X21.3 for the "Booksize" format
This function is not supported for the "chassis" format.

p3866[0...7] BI: Braking Module fault / BM fault

B_INF (Brk Mod ext)

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 9951
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Sets the signal source for the "Fault" message of the Braking Module.
BI: p3866[0...7] = 1 signal:
--> no fault.
BI: p3866[0...7] = 0 signal:
--> fault is signaled.
An automatic acknowledgment via binector output r3861 at certain time intervals is initiated.
If, after 375 ms this acknowledgment is not successful, then Alarm A06900 is output.

Dependency: See also: r3861
See also: A06900

Note: For the Braking Module, this message is output via the following terminal:
- X21.4 for the "Booksize" format
- X21.5 for the "Chassis" format

p3880 BI: ESM activation signal source / ESM act s_s

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 7033
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to activate the essential service mode (ESM) via digital input.
Using this function, when required the motor can be operated for as long as possible (e.g. to extract smoke).
BI: p3880 = 1 signal:
The essential service mode is activated.
BI: p3880 = 0 signal:
The essential service mode is deactivated.

Dependency: The function can only be activated for the following products:
- SINAMICS G130/G150/S150 (VECTOR)
- SINAMICS S120 AC drive (AC/AC, CU310-2 with PM240-2, VECTOR_AC)

If the signal source for the ESM activation is interconnected (p3880 > 0), and a motor encoder is parameterized (p0187, p0400), then for an encoder fault, the fault response is automatically activated (p0491 = 1).
See also: p3881, p3882, p3883, p3886, r3887, p3888, r3889

Warning: When activating the essential service mode (BI: p3880 = 1 signal), the motor immediately runs according to the selected setpoint source. When the essential service mode is activated, the motor cannot be stopped using the OFF commands.

Note: ESM: Essential Service Mode
Permissible signal sources:
- BO: r0722.x (high active)
- BO: r0723.x (low active), x = 0 ... 17, 20, 21

p3881 ESM setpoint source / ESM set_s

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** 7033
	P group: Functions	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	7	0

Description: Sets the setpoint source for essential service mode (ESM).

Value:
0: Last known setpoint (r1078 smoothed)
1: Fixed speed setpoint 15 (p1015)
3: Fieldbus
5: TB30/TM31 analog input
6: Enable the response OFF1
7: Enable the response OFF2

Note: ESM: Essential Service Mode
When the essential service mode is activated, the effective speed setpoint is displayed in r1114.
For p3881 = 0:
The last known setpoint value is only safely and reliably transferred if it was present for at least 30 s prior to activating the essential service mode.
Speed setpoints from the jog mode (p1058, p1059) are not taken into account.
For p3881 = 5:
The signal source for the setpoint via analog input for TB30/TM31 is set via p3886.
For p3881 = 6:
n_act = 0: pulse suppression and switching on inhibited.
n_active > 0: braking along the ramp-function generator down ramp (p1121), pulse cancellation and switching on inhibited.
For p3881 = 7:
n_act = 0: pulse suppression and switching on inhibited.
n_act > 0: immediate pulse cancellation and switching on inhibited.

p3882 ESM setpoint source alternative / ESM set_s alt

VECTOR_G

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 7033
P group: Functions	**Unit group:** -	**Unit selection:** -

01	Direction of rotation inverted	Yes	No	-
02	Setpoint signal lost	Yes	No	-
04	Bypass active	Yes	No	-
07	Setpoint TB30/TM31 analog input parameterized (p3886)	Yes	No	-
08	Power unit not permissible (permissible p0201 >= 14000)	Yes	No	-
09	Response OFF1/OFF2 activated	Yes	No	-
10	Automatic restart interrupted (F07320)	Yes	No	-
11	Ramp-function generator bypassed	Yes	No	-

Note: ESM: Essential Service Mode

p3900 Completion of quick commissioning / Compl quick_com

VECTOR_G

Can be changed: C2(1)	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	3	0

Description: Exits quick commissioning (p0010 = 1) with automatic calculation of all parameters of all existing drive data sets that depend on the entries made during quick commissioning.

p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning.

The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 are re-established and all of the dependent motor, open-loop and control-loop control parameters are calculated (corresponding to p0340 = 1).

p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700, p1000 and p1500 and the calculations corresponding to p0340 = 1.

p3900 = 3 only includes the calculations associated with the motor, open-loop and closed-loop control parameters corresponding to p0340 = 1.

Value:
0: No quick parameterization
1: Quick parameterization after parameter reset
2: Quick parameterization (only) for BICO and motor parameters
3: Quick parameterization for motor parameters (only)

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: When the calculations have been completed, p3900 and p0010 are automatically reset to a value of zero.

When calculating motor, open-loop and closed-loop control parameters (such as for p0340 = 1) parameters associated with a selected Siemens catalog motor are not overwritten.

If a catalog motor has not been selected (p0300), then the following parameters are reset with p3900 > 0 in order to restore the situation that applied when commissioning the drive for the first time:

induction motors p0320, p0352, p0353, p0362 ... p0369, p0391 ... p0393, p0604, p0605, p0626 ... p0628

synchronous motor p0326, p0327, p0352, p0353, p0391 ... p0393, p0604, p0605.

p3900 Completion of quick commissioning / Compl quick_com

B_INF

0	3	0

Description: Exits the quick commissioning (p0010 = 1) with automatic calculation of all of the parameters that depend on the entries made during the quick commissioning.

p3900 = 1 initially includes a parameter reset (factory setting, the same as p0970 = 1) for all parameters of the drive object; however, without overwriting the entries made during the quick commissioning. The interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700 are re-established and all of the dependent filter and closed-loop control parameters are calculated (corresponding to p0340 = 1).

p3900 = 2 includes the restoration of the interconnections of PROFIBUS PZD telegram selection (p0922) and the interconnections via p0700 and the calculations corresponding to p0340 = 1.

p3900 = 3 only includes the end of quick commissioning.

Value:
0: No quick parameterization
1: Quick parameterization after parameter reset
2: Quick param. (only) for controller par. and reset for BICO par
3: Completion of quick commissioning

Notice: After the value has been modified, no further parameter modifications can be made and the status is shown in r3996. Modifications can be made again when r3996 = 0.

Note: When the calculations have been completed, p3900 and p0010 are automatically reset to a value of zero.

p3901[0...n] Power unit EEPROM Vdc offset calibration / PU EEPROM Vdc offs

VECTOR_G, B_INF

Can be changed: C1, C2(1), T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** PDS, p0120	**Function diagram:** -
P group: All groups	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-40.0 [V]	40.0 [V]	0.0 [V]

Description: Differential voltage for calibrating the offset for DC link voltage measurement.

Dependency: See also: r0192, p0212

Caution: Incorrect use of the calibration can have a negative impact on the closed-loop control.

The parameter influences the upper and lower voltage detection.

Note: Parameter entries are directly saved in the DRIVE-CLiQ component involved.

The parameter is only effective in the case of booksize power units, if r0192.22 = 1 and p0212.0 = 1.

	11	Deactivate pulse measurement Lq Ld	Yes	No	-
	12	Deactivate rotor resistance Rr measurement	Yes	No	-
	14	Deactivate valve interlocking time measurement	Yes	No	-
	15	Determine only stator resistance, valve voltage fault, dead time	Yes	No	-
	16	Short motor identification (lower quality)	Yes	No	-
	17	Measurement without control parameter calculation	Yes	No	-
	18	After motID direct transition into operation	Yes	No	-
	19	After MotID automatically save results	Yes	No	-
	20	Estimate cable resistance	Yes	No	-
	21	Calibrate output voltage measurement	Yes	No	-
	22	Only identify circle	Yes	No	-
	23	Deactivate circle identification	Yes	No	-
	24	Circle identification with 0 and 90 degrees	Yes	No	-
	25	Deactivate gating unit switchover	Yes	No	-

Dependency: See also: r3925

Note: The parameter is a copy of p1909.

r3928[0...n] Rotating measurement configuration / Rot meas config

VECTOR_G (n/M)

Can be changed: -	**Calculated:** CALC_MOD_ALL	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** DDS, p0180	**Function diagram:** -
P group: Motor identification	**Unit group:** -	**Unit selection:** -
Not for motor type: REL	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Successfully completed component of the last rotating measurement carried out.

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	Encoder test active	Yes	No	-
	01	Saturation characteristic identification	Yes	No	-
	02	Moment of inertia identification	Yes	No	-
	03	Re-calculates the speed controller parameters	Yes	No	-
	04	Speed controller optimization (vibration test)	Yes	No	-
	05	q leakage inductance ident. (for current controller adaptation)	Yes	No	-
	11	Do not change the controller parameters during the measurement	Yes	No	-
	12	Measurement shortened	Yes	No	-
	13	After measurement direct transition into operation	Yes	No	-
	14	Calculate speed actual value smoothing time	Yes	No	-

Dependency: See also: r3925

Note: The parameter is a copy of p1959.

p3940[0...n] Motor/controller data calculation / Mot/ctrl_data calc

VECTOR_G

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dyn. index:** DDS, p0180 | **Function diagram:** -
P group: All groups | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	3	0

Description: Selecting the calculation of the motor/controller data for the offline parameterization Startdrive

Value:
0: No calculation
1: Complete calculation
3: Calculation without equivalent circuit diagram data

Dependency: The parameter is preassigned when changing the motor.
See also: p0340

p3950 Service parameter / Serv par

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: C1, U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dyn. index:** - | **Function diagram:** -
P group: All groups | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	-

Description: For service personnel only.

r3974 Drive unit status word / Drv_unit ZSW

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: - | **Calculated:** - | **Access level:** 1
Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** -
P group: - | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	-

Description: Displays the status word for the drive unit.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Software reset active	Yes	No	-
01	Writing of parameters disabled as parameter save in progress	Yes	No	-
02	Writing of parameters disabled as macro is running	Yes	No	-

r3977 BICO counter topology / BICO counter topo

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: - | **Calculated:** - | **Access level:** 4
Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** -
P group: Commands | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
-	-	-

Description: Displays the BICO interconnections that have been parameterized in the complete (overall) topology.
The counter is incremented by one for each modified BICO interconnection.

Dependency: See also: r3978, r3979

r3978 BICO CounterDevice / BICO CounterDevice

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the counter reading for modified BICO interconnections on this device.
The counter is incremented by one for each modified BICO interconnection.

r3979 BICO counter drive object / BICO counter DO

VECTOR_G, B_INF, TM31, TM120, TM150, TB30, TM54F_MA, TM54F_SL, ENC, HUB

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Commands	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the counter reading for modified BICO interconnections on this drive object.
The counter is incremented by one for each modified BICO interconnection.

p3981 Acknowledge drive object faults / Ackn DO faults

All objects

Can be changed: U, T	**Calculated:** -	**Access level:** 2
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** 8060
P group: Messages	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Setting to acknowledge all active faults of a drive object.
Notice: Safety messages cannot be acknowledged using this parameter.
Note: Parameter should be set from 0 to 1 to acknowledge.
After acknowledgment, the parameter is automatically reset to 0.

p3985 Master control mode selection / PcCtrl mode select

VECTOR_G, B_INF

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Setpoints	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Sets the mode to change over the master control / LOCAL mode.
Value:
0: Change master control for STW1.0 = 0
1: Change master control in operation
Danger:

When changing the master control in operation, the drive can manifest undesirable behavior - e.g. it can accelerate up to another setpoint.

r3986 Number of parameters / Par count

All objects

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the number of parameters for this drive unit.
The number comprises the device-specific and the drive-specific parameters.

Dependency: See also: r0980, r0981, r0989

r3988[0...1] Boot state / Boot_state

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	10800	-

Description: Index 0:
Displays the boot state.
Index 1:
Displays the partial boot state.

Value:

0: Not active
1: Fatal fault
10: Fault
20: Reset all parameters
30: Drive object modified
40: Download using the commissioning tool
50: Parameter download using commissioning tool
90: Reset Control Unit and delete drive objects
100: Start initialization
101: Wait for topology input
110: Instantiate Control Unit basis
111: Insert drive object
112: Remove drive object
113: Change drive object number
114: Change component number
115: Parameter download using commissioning tool
117: Remove component
150: Wait until actual topology determined
160: Evaluate topology
170: Instantiate Control Unit reset
180: Initialization YDB configuration information
200: First commissioning
210: Generate drive packages
250: Wait for topology acknowledge
325: Wait for input of drive type
350: Determine drive type
360: Write into topology-dependent parameters
370: Wait until p0009 = 0 is set
380: Check topology
550: Call conversion functions for parameter
625: Wait non-cyclic starting DRIVE-CLiQ
650: Start cyclic operation
660: Evaluate drive commissioning status
670: Automatic FW update DRIVE-CLiQ components
680: Wait for CU LINK slaves
690: Wait non-cyclic starting DRIVE-CLiQ
700: Save parameters
725: Wait until DRIVE-CLiQ cyclic
740: Check the ability to operate
745: Start of the time slices
750: Interrupt enable
800: Initialization finished
10050: Wait for synchronization
10100: Wait for CU LINK slaves
10150: Wait until actual topology determined
10200: Evaluate component status
10250: Call conversion functions for parameter
10300: Preparation cyclic operation
10350: Automatic FW update DRIVE-CLiQ components
10400: Wait for slave properties
10450: Check CX/NX status
10500: Wait until DRIVE-CLiQ cyclic
10550: Carry out warm start
10600: Evaluate, encoder status
10800: Partial boot completed

Index:

[0] = System
[1] = Partial boot

r3996[0...1] Parameter write inhibit status / Par_write inhib st

All objects	**Can be changed:** -	**Calculated:** -	**Access level:** 1
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Displays whether writing to parameters is inhibited.
r3996[0] = 0:
Parameter write not inhibited.
0 < r3996[0] < 100:
Parameter write inhibited. The value shows how the calculations are progressing.

Index: [0] = Progress calculations
[1] = Cause

Note: For index [1]:
Only for internal Siemens troubleshooting.

r3998[0...n] First drive commissioning / First drv_com

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3

	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for terminal DI/DO 11 (X541.5) of Terminal Module 31 (TM31).

Note: Prerequisite: The DI/DO must be set as an output (p4028.11 = 1).
DI/DO: Bidirectional Digital Input/Output

p4046 TM31 digital outputs limit current / TM31 DO limit curr

TM31

Can be changed: T | **Calculated:** - | **Access level:** 2
Data type: Integer16 | **Dyn. index:** - | **Function diagram:** 9560
P group: Commands | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 1

Min:	Max:	Factory setting:
0	1	0

Description: Sets the limit for the total output voltage of terminals X541.1, X541.2, X541.3 and X541.4 (DI/DO 8 ... 11) of Terminal Module 31 (TM31).

Value:
0: 0.1 A total current limit DI/DO 8 ... 11
1: 1.0 A total current limit DI/DO 8 ... 11

Dependency: See also: p4028

Warning: Since the sum of the output currents at terminals X541.1, X541.2, X541.3 and X541.4 is limited, an overcurrent or short circuit at one output terminal can cause a dip in the signal at the other terminals.

r4047 TM31 digital outputs status / TM31 DO status

TM31

Can be changed: - | **Calculated:** - | **Access level:** 1

p4056[0...1] TM31 analog inputs type / TM31 AI type

TM31

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 9566, 9568
P group: Terminals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	5	4

Description: Sets the type of analog inputs of Terminal Module 31 (TM31).
p4056[x] = 0, 4 correspond to a voltage input (r4052, p4057, p4059 are displayed in V).
p4056[x] = 2, 3, 5 correspond to a current input (r4052, p4057, p4059 are displayed in mA).
In addition, the associated switch S5 must be appropriately set.
AI 0: S5.0 = V --> voltage input, S5.0 = I --> current input (burden resistor = 250 Ohm)
AI 1: S5.1 = V --> voltage input, S5.1 = I --> current input (burden resistor = 250 Ohm)

Value:
0: Unipolar voltage input (0 V ... +10 V)
2: Unipolar current input (0 mA ... +20 mA)
3: Unipolar current input monitored (+4 mA to +20 mA)
4: Bipolar voltage input (-10 V ... +10 V)
5: Bipolar current input (-20 mA to +20 mA)

Index: [0] = AI 0 (X521.1/X521.2, S5.0)
[1] = AI 1 (X521.3/X521.4, S5.1)

Warning:

The maximum voltage difference between the analog input terminals AI+, AI- and the ground of the TM31 (X520.6, X530.3) may not exceed 35 V.
For operation with the load resistor switched in, the voltage between the differential inputs AI+ and AI- may not exceed 15 V or the impressed current of 60 mA; if this is not carefully observed, the input will be damaged.

Notice: For operation as a voltage input/current input, switch S5.0 or S5.1 must be appropriately set.

Note: When changing p4056, the parameters of the scaling characteristic (p4057, p4058, p4059, p4060) are overwritten with the following default values:
For p4056 = 0, 4, p4057 is set to 0.0 V, p4058 to 0.0 %, p4059 to 10.0 V and p4060 to 100.0 %.
For p4056 = 2, 5, p4057 is set to 0.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.
For p4056 = 3, p4057 is set to 4.0 mA, p4058 to 0.0 %, p4059 to 20.0 mA and p4060 to 100.0 %.

This parameter specifies the y coordinate (output voltage in V or output current in mA) of the 2nd value pair of the characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: The unit of this parameter (V or mA) depends on the analog output type.
See also: p4076

Notice: This parameter is automatically overwritten when changing p4076 (type of analog outputs).

Note: The parameters for the characteristic do not have a limiting effect.

p4080[0...1] TB30 analog outputs characteristic value y2 / TB30 AO char y2

TB30	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 9106
	P group: Terminals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-11.000 [V]	11.000 [V]	10.000 [V]

Description: Sets the scaling characteristic for the analog outputs of Terminal Board 30 (TB30).
The scaling characteristic for the analog outputs is defined using 2 points.
This parameter specifies the y coordinate (output voltage in V) of the 2nd value pair of the characteristic.

Index: [0] = AO 0 (X482.5/X482.6)
[1] = AO 1 (X482.7/X482.8)

Note: The parameters for the characteristic do not have a limiting effect.

p4082[0...1] BI: TM31 analog outputs invert signal source / TM31 AO inv s_s

TM31	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 9572
	P group: Terminals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source to invert the analog output signals of Terminal Module 31 (TM31).

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

p4082[0...1] BI: TB30 analog outputs invert signal source / TB30 AO inv s_s

TB30	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32 / Binary	**Dyn. index:** -	**Function diagram:** 9106
	P group: Terminals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0

Description: Sets the signal source for inverting the analog output signals of the Terminal Board 30 (TB30).

Index: [0] = AO 0 (X482.5/X482.6)
[1] = AO 1 (X482.7/X482.8)

p4083[0...1] TM31 analog outputs offset / TM31 AO offset

TM31	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 9572
	P group: Terminals	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-20.000	20.000	0.000

Description: Sets the offset for the analog outputs of Terminal Module 31 (TM31).
The offset is added to the output signal after the scaling characteristic.

Index: [0] = AO 0 (X522.1, X522.2, X522.3)
[1] = AO 1 (X522.4, X522.5, X522.6)

Dependency: The unit of this parameter (V or mA) depends on the analog input type.
See also: p4076

Note: This means, for example, the offset of a downstream isolating amplifier can be compensated.

p4083[0...1] TB30 analog outputs offset / TB30 AO offset

Note: This parameter is not saved when data is backed-up (p0971, p0977).
AI: Analog Input

p4099[0...2] TM31 inputs/outputs sampling time / TM31 I/O t_samp

TM31	**Can be changed:** C1(3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 9549, 9550
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [µs]	5000.00 [µs]	4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Module 31 (TM31).

Index: [0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.
The following applies for the sampling time:
The sampling times at a DRIVE-CLiQ line must be integral multiples of one another.
The sampling times of this TM must be an integral multiple of a servo or vector drive that exists in the system.
The minimum permissible sampling time for index 0 (digital inputs/outputs) is 125 µs.
The minimum permissible sampling time for index 1 (analog inputs) and index 2 (analog outputs) is 62.5 µs.
The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).
See also: p0009, r0110, r0111

Notice: The sampling times entered in index 0 (digital inputs/outputs) and index 2 (analog outputs) must always be greater than or equal to the sampling time in index 1 (analog inputs).

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).
Parameter p4099[0] must never be equal to zero.

p4099[0...2] TB30 inputs/outputs sampling time / TB30 I/O t_samp

TB30	**Can be changed:** C1(3)	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 9099, 9100
	P group: Commands	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.00 [µs]	5000.00 [µs]	[0] 4000.00 [µs] [1] 4000.00 [µs] [2] 4000.00 [µs]

Description: Sets the sampling time for the inputs and outputs of Terminal Board 30 (TB30).

Index: [0] = Digital inputs/outputs (DI/DO)
[1] = Analog inputs (AI)
[2] = Analog outputs (AO)

Dependency: The parameter can only be modified for p0009 = 3, 29.
The sampling times can only be set as an integer multiple of the lowest basic sampling time (r0110[0]).
See also: p0009, r0110, r0111

Note: The changed sampling time is immediately effective after a completed sub-boot (p0009 -> 0).
For clock cycle synchronous PROFIBUS operation, the TB30 hardware (e.g. analog/digital converter) is operated with the PROFIBUS clock cycle (r2064[1]). This clock cycle is also kept after the PROFIBUS connection has been exited up to the next time that the Control Unit is switched off. In this case, a faster sampling time than the PROFIBUS clock cycle is not practical in p4099[0...2].

p4100[0...3] TM120 temperature evaluation, sensor type / TM120 sensor type

TM120

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 9605, 9606
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	6	1

Description: Sets the sensor type for temperature evaluation via Terminal Module 120 (TM120).
This means that the temperature sensor type is selected and the evaluation is switched in.

Value:
0: Evaluation disabled
1: PTC thermistor
2: KTY84
4: Bimetallic NC contact
6: PT1000

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3

Notice: For p4102[0...7] = 251 °C, evaluation of the corresponding threshold is deactivated.
For sensor type "PTC thermistor" (p4100[0...3] = 1), the following applies:
To activate the corresponding alarm or fault, p4102[0...7] must be set <= 250 °C.

Note: The temperature sensors are connected to the following terminals:
X521.2(+) and X521.1(-) = channel 0
X521.4(+) and X521.3(-) = channel 1
X521.6(+) and X521.5(-) = channel 2
X521.8(+) and X521.7(-) = channel 3

p4100[0...11] TM150 sensor type / TM150 sensor type

TM150

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 9626, 9627
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	6	5

Description: Sets the sensor type for Terminal Module 150 (TM150)
This means that the temperature sensor type is selected and the evaluation is switched in.

Value:
0: Evaluation disabled
1: PTC thermistor
2: KTY84
4: Bimetallic NC contact
5: PT100
6: PT1000

Index: [0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5
[6] = Temperature channel 6
[7] = Temperature channel 7
[8] = Temperature channel 8
[9] = Temperature channel 9
[10] = Temperature channel 10
[11] = Temperature channel 11

Notice: For p4102[0...23] = 251 °C, evaluation of the corresponding threshold is deactivated.
For sensor type "PTC thermistor" and "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:
To activate the corresponding alarm or fault, p4102[0...23] must be set <= 250 °C.

Note: The temperature sensors are connected to the following terminals:
X531 = channel 0 (for 2x2 wire evaluation, additionally channel 6)
X532 = channel 1 (for 2x2 wire evaluation, additionally channel 7)
X533 = channel 2 (for 2x2 wire evaluation, additionally channel 8)
X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)
X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)
X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)
Details on the wiring are included in the parameter description for p4108.

p4100 TM31 sensor type / TM31 sensor type

TM31

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** 9576
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	6	0

Description: Sets the sensor type for Terminal Module 31 (TM31)
This means that the temperature sensor type is selected and the evaluation is switched in.

Value: 0: Evaluation disabled
1: PTC thermistor
2: KTY84
4: Bimetallic NC contact
6: PT1000

Notice: For p4102[0...1] = 251 °C, evaluation of the corresponding threshold is deactivated.
For sensor type "PTC thermistor" (p4100 = 1), the following applies:
To activate the corresponding alarm or fault, p4102[0...1] must be set <= 250 °C.

Note: The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

r4101[0...3] TM120 sensor resistance / TM120 R_sensor

TM120

- [ohm] - [ohm] - [ohm]

Description: Displays the actual resistance value of the temperature sensor connected at the Terminal Module.

Note: The maximum measurable resistance value is approx. 1720 Ohm.
The temperature sensor is connected at terminals X522.7(+) and X522.8(-).

p4102[0...7] TM120 fault threshold/alarm threshold / TM120 F/A_thr

TM120	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** 9605, 9606
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-48 [°C]	251 [°C]	251 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 120 (TM120).

A35211 is initiated, if the temperature actual value r4105[0] > p4102[0]

F35207 is initiated if the temperature actual value r4105[0] > p4102[1] or timer p4103[0] has expired

A35212 is initiated, if the temperature actual value r4105[1] > p4102[2]

F35208 is initiated if the temperature actual value r4105[1] > p4102[3] or timer p4103[1] has expired

A35213 is initiated, if the temperature actual value r4105[2] > p4102[4]

F35209 is initiated if the temperature actual value r4105[2] > p4102[5] or timer p4103[2] has expired

A35214 is initiated, if the temperature actual value r4105[3] > p4102[6]

F35210 is initiated if the temperature actual value r4105[3] > p4102[7] or timer p4103[3] has expired

For alarms A35211, A35212, A35213, A35214 the following applies:

- Remains until the temperature actual value (r4105[0...3]) reaches or falls below the value (p4102[0, 2, 4, 6] - hysteresis).

For fault F35207, F35208, F35209, F35210 the following applies:

- Remains until the temperature actual value (r4105[0...3]) reaches or falls below the value (p4102[1, 3, 5, 7] - hysteresis) and the fault has been acknowledged.

- the hysteresis value is 5 K and cannot be changed.

Index:
[0] = Channel 0 alarm threshold (A35211)
[1] = Channel 0 fault threshold (F35207)
[2] = Channel 1 alarm threshold (A35212)
[3] = Channel 1 fault threshold (F35208)
[4] = Channel 2 alarm threshold (A35213)
[5] = Channel 2 fault threshold (F35209)
[6] = Channel 3 alarm threshold (A35214)
[7] = Channel 3 fault threshold (F35210)

Dependency: See also: p4103

Notice: Fault F35207 ... F35210 only causes the drive to shut down if there is at least one BICO interconnection between the drive and TM120.

For p4102[0...7] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100[0...3] = 1), the following applies:

To activate the corresponding alarm or fault, p4102[0...7] must be set <= 250 °C.

Note: The temperature sensor is connected to the following terminals:

X521.2(+) and X521.1(-) = channel 0

X521.4(+) and X521.3(-) = channel 1

X521.6(+) and X521.5(-) = channel 2

X521.8(+) and X521.7(-) = channel 3

p4102[0...23] TM150 fault threshold/alarm threshold / TM150 F/A_thr

TM150	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** 9626, 9627
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-99 [°C]	251 [°C]	251 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 150 (TM150).

For alarms (even indices [0, 2, 4 ... 22]), the following applies:

- the corresponding alarm is initiated, if the temperature actual value associated with a temperature channel exceeds the associated alarm threshold (r4105[x] > p4102[2x]. In addition, the timer is started (p4103[x]).

- the alarm remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x]) - hysteresis (p4118[x]).

For faults (uneven indices [1, 3, 5 ... 23]), the following applies:

- the corresponding fault is initiated, if the temperature actual value associated with a temperature channel exceeds the associated fault threshold (r4105[x] > p4102[2x+1] or the associated timer (p4103[x] has expired.

- the fault remains until the temperature actual value (r4105[x]) reaches or falls below the threshold value (p4102[2x+1]) - hysteresis (p4118[x]) and the fault has been acknowledged.

[23] = Channel 11 fault threshold (F35407)

Dependency: See also: p4103, r4104, r4105, p4118

Notice: Faults F35207 ... F35210 and F35400 ... F35407 only cause the drive to be shut down if there is at least one BICO interconnection between the drive and the TM150.

For p4102[0...23] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100[0...11] = 1), the following applies:

To activate the corresponding alarm or fault, p4102[0...23] must be set <= 250 °C.

Note: The hysteresis can be set in p4118[0...11].

p4102[0...1] TM31 fault threshold/alarm threshold / TM31 F/A_thr

TM31	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** 9576
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-48 [°C]	251 [°C]	[0] 100 [°C] [1] 120 [°C]

Description: Sets the fault threshold/alarm threshold for Terminal Module 31 (TM31).

A35211 is initiated, if the temperature actual value r4105[0] > p4102[0]

F35207 is initiated if the temperature actual value r4105[0] > p4102[1] or timer p4103[0] has expired

For alarm A35211 the following applies:

- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[0] - hysteresis).

For fault F35207 the following applies:

- Remains until the temperature actual value (r4105) reaches or falls below the value (p4102[1] - hysteresis) and the fault has been acknowledged.
- the hysteresis value is 5 K and cannot be changed by the user.

Index: [0] = Alarm threshold
[1] = Fault threshold

Dependency: See also: r4104

Notice: Fault F35207 only causes the drive to be shut down if there is at least one BICO interconnection between the drive and TM31.

For p4102[0...1] = 251 °C, evaluation of the corresponding threshold is deactivated.

For sensor type "PTC thermistor" (p4100 = 1), the following applies:

To activate the alarm or fault, p4102[0...1] must be set <= 250 °C.

p4103[0...3] TM120 temperature evaluation delay time / TM120 temp t_delay

TM120	**Can be changed:** U, T	**Calculated:** -	**Access level:** 1
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 9605, 9606
	P group: Motor	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.000 [ms]	600000.000 [ms]	0.000 [ms]

Description: Sets the delay time for the output of the fault for the temperature evaluation of Terminal Module 120 (TM120).

The timer is started when the alarm threshold (p4102[0, 2, 4, 6]) is exceeded.

If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then fault F35207 ... F53210 is output.

The fault can be acknowledged, if, after the delay time has expired, the alarm threshold is again fallen below.

For sensor type "KTY84" "PT1000" (p4100[0...3] = 2, 6), the following applies:

If the fault threshold (p4102[1, 3, 5, 7]) is exceeded before the delay time has expired, then fault F35207 ... F35210 is immediately output.

For sensor type "PTC thermistor" (p4100[0...3] = 1), the following applies:

- Alarm and fault threshold simultaneously respond. The fault is only issued after the delay time has expired.

Index: [0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3

Dependency: See also: r4104

Warning: Fault F35207 ... F35210 only causes the drive to shut down if there is at least one BICO interconnection between the drive and TM120.

Note: With p4103 = 0, the timer is deactivated and only the fault threshold is effective.

p4103[0...11] TM150 delay time / TM150 t_delay

TM150

Can be changed: U, T	**Calculated:** -	**Access level:** 1
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 9626, 9627
P group: Motor	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.0 [s]	600.0 [s]	0.0 [s]

Description: Sets the delay time for the output of the fault for the Terminal Module 150 (TM150).

The timer is started when the alarm threshold (e.g. p4102[0]) is exceeded.

If the delay time has expired and the alarm threshold has, in the meantime, not been fallen below, then the corresponding fault is output.

The fault can be acknowledged, if, after the delay time has expired, the alarm threshold is again fallen below.

For sensor type "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6) the following applies:

- if the fault threshold (e.g. p4102[1]) is exceeded before the delay time has expired, then the corresponding fault is immediately output.

For sensor type "PTC thermistor", "Bimetallic NC contact" (p4100[0...11] = 1, 4), the following applies:

- Alarm and fault threshold simultaneously respond. The fault is only issued after the delay time has expired.

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4
[5] = Temperature channel 5

X534 = channel 3 (for 2x2 wire evaluation, additionally channel 9)
X535 = channel 4 (for 2x2 wire evaluation, additionally channel 10)
X536 = channel 5 (for 2x2 wire evaluation, additionally channel 11)

For p4108[0...5] = 0, 2, 3 (1x2, 3, 4 wire evaluation):

The temperature channel belonging to the terminal block with the higher number is automatically deactivated (e.g. for X531 with 3-wire evaluation, channel 6 is deactivated).

p4109[0...11] TM150 wire resistance measurement / TM150 R_wire meas

TM150	**Can be changed:** T	**Calculated:** -	**Access level:** 1
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** 9626, 9627
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Setting to start the measurement of the wire resistance for a channel for the Terminal Module 150 (TM150).

For a 2 wire evaluation, the total wire resistance is measured and saved. During the temperature evaluation, the temperature actual value is automatically calibrated using the measured wire resistance.

Procedure:

1. Select the measuring method (1x2/2x2) for the corresponding terminal block (p4108[0...5] = 0, 1).
2. Set the required sensor type for the corresponding channel (p4100[x] = 1 ... 6, x = 0...5 or 0...11).
3. Jumper the sensor to be connected (short-circuit the sensor cable close to the sensor).
4. Connect the sensor conductors to the appropriate terminals 1(+), 2(-) or 3(+), 4(-).
5. For the corresponding channel, start the measurement of the wire resistance (p4109[x] = 1).
6. After p4109[x] = 0, check the measured resistance value in p4110[x].
7. Remove the jumper across the temperature sensor.

Value:
0: Inactive
1: Start

Index:
[0] = Temperature channel 0
[1] = Temperature channel 1
[2] = Temperature channel 2
[3] = Temperature channel 3
[4] = Temperature channel 4

Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 0000 0000 0000 bin

Description: Assigns the temperature channels to groups for the Terminal Module 150 (TM150)
For each group, the following calculated values are provided from the temperature actual values (r4105[0...11]):
- Maximum value (r4112[0...2])
- Minimum value (r4113[0...2])
- average value (r4114[0...2])

Index: [0] = Group 0
[1] = Group 1
[2] = Group 2

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Temperature channel 0	Yes	No	-
01	Temperature channel 1	Yes	No	-
02	Temperature channel 2	Yes	No	-
03	Temperature channel 3	Yes	No	-
04	Temperature channel 4	Yes	No	-
05	Temperature channel 5	Yes	No	-
06	Temperature channel 6	Yes	No	-
07	Temperature channel 7	Yes	No	-
08	Temperature channel 8	Yes	No	-
09	Temperature channel 9	Yes	No	-
10	Temperature channel 10	Yes	No	-
11	Temperature channel 11	Yes	No	-

Dependency: See also: r4105, r4112, r4113, r4114

Notice: When forming groups, it must be ensured that in one particular group, only temperature channels with the following sensor types are included:
- "KTY84", "PT100", "PT1000" (p4100[0...11] = 2, 5, 6), real temperature actual value

or alternatively

- "PTC thermistor", "bimetallic NC contact" (p4100[0...11] = 1, 4), fictitious temperature actual value (-50 °C, 250 °C)

If these sensor types are combined within one group, then the calculated values for maximum, minimum and average value will be falsified.

Note: Active and inactive temperature channels can be included in one group. However, when calculating the values (r4112, r4113, r4114) only the active temperature channels with valid actual value are taken into account (r4105[0...11] not equal to -300 °C).

Dependency: See also: r0458, p0600, p0601

Note: This parameter is effective only when p0601 = 11.
PTC thermistor: Tripping resistance = 1650 Ohm
Information on using temperature sensors is provided in the following literature:
- hardware description of the appropriate components
- SINAMICS S120 Commissioning Manual

p4618 Motor Module temperature sensor type / MM temp_sens type

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 2
	Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	6	0

Description: Sets the type of temperature sensor connected to the Motor Module.
The temperature actual value is displayed via connector output r4619.

Value:
0: No sensor
2: KTY84
5: PT100
6: PT1000

Dependency: The parameter can only be set if the motor temperature sensor is not connected to the Motor Module (p0600 = 11, X21, X22).
See also: r4619

Notice: Users must evaluate the temperature actual value (CO: r4619).

r4619 CO: Motor Module temperature sensor actual value / MM temp_sens actV

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 2
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -

	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [°C]	- [°C]	- [°C]

Description: Display and connector output for the temperature sensor connected to the Motor Module

Dependency: See also: p4618

Note: For r4619 equal to -200.0 °C, the following applies:
This temperature display is not valid (temperature sensor error).

r4620[0...3] Motor temperature measured / Mot_temp meas

VECTOR_G	**Can be changed:** -	**Calculated:** -	**Access level:** 3
	Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** 8016
	P group: Displays, signals	**Unit group:** 21_1	**Unit selection:** p0505
	Not for motor type: -	**Scaling:** p2006	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	- [°C]	- [°C]	- [°C]

Description: Displays the actual temperature in the motor measured through temperature channels 1 ... 4.

Index: [0] = Temperature channel 1
[1] = Temperature channel 2
[2] = Temperature channel 3
[3] = Temperature channel 4

Note: For a value not equal to -200.0 °C, the following applies:
- this temperature display is valid.
- a KTY/PT1000 temperature sensor is connected.

For a value equal to -200.0 °C, the following applies:
- this temperature display is not valid (temperature sensor error).
- a PTC sensor or bimetallic NC contact is connected.
- the temperature sensor evaluation is deactivated (p0600 = 0 or p0601 = 0).
- the sensor channel is deactivated (p460x = 0 or p461x = 0).

p4622[0...n] Temperature sensor error lower threshold / Temp_sens low thr

VECTOR_G

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** MDS, p0130	**Function diagram:** 8016
P group: -	**Unit group:** 21_1	**Unit selection:** p0505
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-140 [°C]	20 [°C]	-140 [°C]

Description: Sets the minimum temperature to identify a temperature sensor error.
A temperature sensor error is output below this threshold.

Dependency: See also: A07015, F07016

p4630[0...n] Absolute encoder linear measuring step factor / Abs_enc meas fact

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -

p4641[0...2] OEM encoder diagnostic signal selection / OEM enc diag sel

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	65535	0

Description: Sets the trace functionality for OEM encoder manufacturers.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

p4642 Encoder fault test function / Encoder fault test

VECTOR_G	**Can be changed:** U, T	**Calculated:** -	**Access level:** 3
	Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	255	0

Description: Test function to initiate an encoder fault

For p4642 = 1:

When setting, an encoder fault is output once at the currently used motor encoder. Depending on the configuration in p0491, the drive switches over to encoderless operation This means that encoderless motor stopping can be tested.

For p4642 = 2:

When setting, an encoder fault is output once at the currently used motor encoder. For braking, the drive still uses the commutation position of the encoder. This means that a faster motor stopping with encoder can be tested (only functions with SMx modules, otherwise the same response as for p4642 = 1).

The following generally applies:

After acknowledgment, the encoder fault that was issued is cleared and p4642 is set = 0.

Notice: It is not permissible that a data set is switched over between an encoder fault being issued and its deletion.

p4644 Simulated motor encoder configuration / Sim mot_enc config

VECTOR_G (n/M)	**Can be changed:** T	**Calculated:** -	**Access level:** 4
	Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0010 bin

Description: Sets the configuration for the simulated motor encoder.

Using these configuration bits, the response of the encoder status bit "Parking encoder active" (r0481.14) can be set for a pulse inhibit.

For bit 00:

When the bit is set, after a pulse inhibit, encoder status bit "Parking encoder active" (r0481.14) is temporarily set and then withdrawn. When r0481.14 = 1 is set, the higher-level control system is signaled that the position must be re-referenced. When r0481.14 = 0 is reset, then the higher-level control system can switch the system on again.

For bit 01:

When the bit is set, a brake is being used (p1215 = 1, 3) and the pulses are canceled for absolute speeds less than the standstill speed (SERVO: p1226, VECTOR: 2 * p1226), then the encoder status bit "Parking encoder active" (r0481.14) is not set. This means that the position is not re-referenced after switching on again.

For bit 02:

This bit can be used for diagnostics.

When the bit is set, encoder status bit "Parking encoder active" (r0481.14) is not set as a result of the pulse inhibit.

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	For a pulse inhibit, temporarily set bit r0481.14	Yes	No	-
	01	Bit r0481.14 = 0 for pulse inhibit at standstill with brake	Yes	No	-
	02	For a pulse inhibit, do not set bit r0481.14	Yes	No	-

Dependency: See also: r0481

Danger:

For bit 02 = 1:

If it cannot be excluded that the motor shaft turns while the pulses are inhibited, then after the pulse enable, the position calculated by the simulated motor encoder can be offset and not detected using encoder status bit "Parking encoder active" (r0481.14). Hazardous operating states can subsequently occur.

Note: Function "Simulated motor encoder" is activated using p0400 = 9010.

For bit 00, 01, 02 = 0, the following applies:

For a pulse inhibit, encoder status bit "Parking encoder active" (r0481.14) is set. The system must be referenced after switching on again.

For bit 02 = 1, the following applies:

This bit has priority over the other bits.

r4648.0 CO/BO: Encoder status word / Enc status word

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Display and BICO output for the encoder status word.

For bit 00:

The bit is a group message for all encoders of the axis, and is set for the following alarms:

A3x407: "Function limit reached"

A3x415: "Signal level track A or B out of tolerance (alarm)"

A3x419: "Track A or B out of tolerance"

A3x442: "Battery voltage alarm threshold reached"

x = encoder 1, 2, 3

Bit array:	Bit	Signal name	1 signal	0 signal	FD
	00	Encoder maintenance required	Yes	No	-

Notice: Maintenance work may have to be carried out on the encoder.

Note: For bit 00:

For test purposes, the bit can be set using p4642 = 3.

The bit is reset using p4642 = 0.

p4649[0...n] Encoder function reserve amplitude limit incremental signals / Enc fct amp inc

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	500	0

Description: Amplitude threshold of the incremental signals for the function reserve.

If the set amplitude threshold on the incremental signals is fallen below, then alarm A3x407 "Encoder x; function limit reached " is output.

Note: An amplitude threshold of 230 mV can be used as default value.

p4650 Encoder functional reserve component number / Enc fct_res no

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3

Dependency: See also: p4660

Note: A value of zero is displayed if an encoder is not present.

p4662[0...n] Encoder characteristic type / Enc char_type

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 4
	Data type: Integer16	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1	0

Description: Sets the characteristic type.
For non-linear sensors, the interrelationship between the signal voltage and the position can be defined using a third degree polynomial.

Value:
0: Characteristic inactive
1: Characteristic polynomial third degree

Dependency: See also: p4663, p4664, p4665, p4666

Note: If value = 1:
A third degree polynomial is defined as follows:
F(x) = K3 * x^3 + K2 * x^2 + K1 * x + K0
Coefficients K0 ... K3 should be defined and entered into p4663 ... p4666.
The sensor range is emulated to x = -0.5 ... +0.5.

p4663[0...n] Encoder characteristic K0 / Enc char K0

VECTOR_G, ENC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Setting for coefficient K0 to calculate the characteristic (p4662).

Dependency: See also: p4662, p4664, p4665, p4666

p4664[0...n] Encoder characteristic K1 / Enc char K1

VECTOR_G, ENC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Setting for coefficient K1 to calculate the characteristic (p4662).

Dependency: See also: p4662, p4663, p4665, p4666

p4665[0...n] Encoder characteristic K2 / Enc char K2

VECTOR_G, ENC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Setting for coefficient K2 to calculate the characteristic (p4662).

Dependency: See also: p4662, p4663, p4664, p4666

p4666[0...n] Encoder characteristic K3 / Enc char K3

VECTOR_G, ENC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	-

Description: Setting for coefficient K3 to calculate the characteristic (p4662).

Dependency: See also: p4662, p4663, p4664, p4665

p4670[0...n] Analog sensor configuration / Ana_sens config

VECTOR_G, ENC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-	-	0000 0000 0000 0000 0000 0000 0000 0000 bin

Description: Sets the configuration for evaluation on the analog sensor.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
06	Set velocity to 0	Yes	No	-
08	Position value range	0.0 / 1.0 pulse	-0.5 / +0.5 pulse	-
09	Fault/alarm messages	Alarm	Fault	-
10	Channel B act	Yes	No	-
11	Channel A act	Yes	No	-
13	Commutation angle constant	Yes	No	-
14	Suppress faults	Yes	No	-
15	Two-channel evaluation	Yes	No	-
31	Extrapolation	ON	OFF	-

Notice: For bit 06:

Setting the bit sets the velocity actual value (r0061) permanently to 0.

For bit 13:

Setting the bit sets the commutation angle permanently to the commutation angle offset (p0431).

Note: For bit 09:
A setting of bit = 0 will trigger a fault for the relevant channel if the actual value is invalid.
A setting of bit = 1 will trigger an alarm for the relevant channel if the actual value is invalid.
For bits 10, 11:
If both channels are activated, the actual value is generated from the average value of both channels. If a channel fails (actual value invalid), it is not included when the average value is generated.
For bit 14:
The bit is only evaluated for encoder 1. Otherwise no effect.
For bit 15:
When the bit is set, both input signals are separately evaluated and transferred.
Prerequisite:
Function "Extended cyclic DRIVE-CLiQ telegram" is activated (p0454.4 = 1).

p4671[0...n] Analog sensor input / Ana_sens inp

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 4
Data type: Integer16	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	3	0

Description: Sets the input circuit for the analog sensor.

Value:
0: Differential
1: Single-ended A, B
2: Single-ended A*, B*
3: Single-ended A, B sensitive

Note: p4671 = 0:
The two signals on a track are evaluated differentially.
p4671 = 1:
Only the non-inverted signal on a track is evaluated.
p4671 = 2:
Only the inverted signal on a track is evaluated.
p4671 = 3:
Only the non-inverted signal on a track (high resolution) is evaluated.

p4672[0...n] Analog sensor channel A voltage at actual value zero / Ana_sens A U at 0

VECTOR_G, ENC

Can be changed: U, T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-10.0000 [V]	10.0000 [V]	0.0000 [V]

Description: Sets the voltage when the connected sensor is at actual value zero.
At this voltage channel A supplies an actual value of zero.

p4673[0...n] Analog sensor channel A voltage per encoder period / Ana_sens A U/per

VECTOR_G, ENC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-10.0000 [V]	10.0000 [V]	6.0000 [V]

Description: Sets the output voltage range to be mapped for the connected analog sensor.
The voltage range is determined by the following parameters:
- p4672 (voltage at actual value 0)
- p4673 (voltage per encoder period)

Note: The minimum actual value which can be mapped is equal to p4672 - p4673/2.
The maximum actual value which can be mapped is equal to p4672 + p4673/2.

p4674[0...n] Analog sensor channel B voltage at actual value zero / Ana_sens B U at 0

VECTOR_G, ENC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-10.0000 [V]	10.0000 [V]	0.0000 [V]

Description: Sets the voltage when the connected sensor is at actual value zero.
At this voltage channel B supplies an actual value of zero.

p4675[0...n] Analog sensor channel B voltage per encoder period / Ana_sens B U/per

VECTOR_G, ENC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-10.0000 [V]	10.0000 [V]	6.0000 [V]

Description: Sets the output voltage range to be mapped for the connected analog sensor.
The voltage range is determined by the following parameters:
- p4674 (voltage at actual value 0)
- p4675 (voltage per encoder period)

Note: The minimum actual value which can be mapped is equal to p4674 - p4675/2.
The maximum actual value which can be mapped is equal to p4674 + p4675/2.

p4676[0...n] Analog sensor range limit threshold / Ana_sens lim thr

VECTOR_G, ENC	**Can be changed:** U, T	**Calculated:** -	**Access level:** 4
	Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0.0 [%]	100.0 [%]	100.0 [%]

Description: Sets the threshold for limit monitoring of the absolute actual value on the analog sensor.
If this threshold is overshot by the actual value of a channel, a corresponding fault/alarm (p4670.9) is output.

Dependency: See also: p4673, p4675

p4677[0...n] Analog sensor LVDT configuration / Ana_sens LVDT conf

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	0000 bin

Description: Sets the configuration for LVDT mode on the analog sensor.

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	LVDT ON	Yes	No	-
01	Track B excitation	Yes	No	-
02	Fixed value amplitude	Yes	No	-
03	Fixed value amplitude and phase	Yes	No	-

p4678[0...n] Analog sensor LVDT ratio / An_sens LVDT ratio

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0.00 [%]	200.00 [%]	50.00 [%]

Description: Sets the ratio for the LVDT sensor.

p4679[0...n] Analog sensor LVDT phase / An_sens LVDT ph

VECTOR_G, ENC

Can be changed: T	**Calculated:** -	**Access level:** 4
Data type: FloatingPoint32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-360.00 [°]	360.00 [°]	0.00 [°]

Description: Sets the phase for the LVDT sensor.

p4680[0...n] Zero mark monitoring tolerance permissible / ZM_mon tol perm

VECTOR_G, ENC

Can be changed: C2(4)	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	1000	4

Description: Sets the permissible tolerance in encoder pulses for the zero mark distance in the context of zero mark monitoring.
Causes fault F3x100 to appear less frequently.

Dependency: See also: F31100

p4681[0...n] Zero mark monitoring tolerance window limit 1 positive / ZM tol lim 1 pos

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	1000	2

Description: Sets the positive tolerance window in encoder pulses for limit 1 for the zero mark monitoring.
The pulse number is corrected if the deviation is less than this limit. If it is higher than this limit, fault F3x131 is triggered.
If fault F3x131 is re-parameterized to an alarm (A) or no message (N), then the encoder pulses that are not corrected are transferred to the accumulator (p4688). The accumulator can be deactivated using p0437.7.

Dependency: See also: p0437, p4688
See also: F31131

Note: This monitoring is activated by setting p0437.2 = 1 (position actual value correction).
The positive limit describes additional pulses due to EMC.

p4682[0...n] Zero mark monitoring tolerance window limit 1 negative / ZM tol lim 1 neg

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-1001	0	-1001

Description: Sets the negative tolerance window in encoder pulses for limit 1 for the zero mark monitoring.
The pulse number is corrected if the deviation is less than this limit. If it is higher than this limit, fault F3x131 is triggered.
If fault F3x131 is re-parameterized to an alarm (A) or no message (N), then the encoder pulses that are not corrected are transferred to the accumulator (p4688). The accumulator can be deactivated using p0437.7.

Dependency: See also: p0437, p4681, p4688
See also: F31131

Note: This monitoring is activated by setting p0437.2 = 1 (position actual value correction).
For a set value = -1001, the negated value of p4681 becomes active.
The negative limit describes the pulses lost due to a covered glass panel in the incremental encoder.

p4683[0...n] Zero mark monitoring tolerance window alarm threshold positive / ZM tol A_thr pos

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	100000	0

Description: Sets the positive tolerance window in encoder pulses for limit 2 for the zero mark monitoring.
Accumulator (p4688) is compared with this parameter, and where relevant, alarm A3x422 is output for 5 seconds.

Dependency: See also: p0437, p4681, p4682, p4688
See also: F31131, A31422

Note: Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction).

p4684[0...n] Zero mark monitoring tolerance window alarm threshold negative / ZM tol A_thr neg

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-100001	0	-100001

Description: Sets the negative tolerance window in encoder pulses for limit 2 for the zero mark monitoring.
Accumulator (p4688) is compared with this parameter, and where relevant, alarm A3x422 is output for 5 seconds.

Dependency: See also: p0437, p4683, p4688
See also: F31131, A31422

Note: Zero mark monitoring is activated by setting p0437.2 = 1 (position actual value correction).
For a set value = -100001, the negated value of p4683 is effective.

p4685[0...n] Speed actual value average value generation / n_act mean val

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	20	0

Description: Sets the number of current controller sampling times for average value generation of the speed actual value.

Note: Value = 0, 1: No average value generation.
Higher values also mean higher dead times for the speed actual value.

p4686[0...n] Zero mark minimum length / ZM min length

VECTOR_G, ENC	**Can be changed:** C2(4)	**Calculated:** -	**Access level:** 3
	Data type: Unsigned32	**Dyn. index:** EDS, p0140	**Function diagram:** -
	P group: Encoder	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	0	10	1

Description: Sets the minimum length for the zero mark in 1/4 encoder pulses.

Dependency: See also: p0425, p0437

Note: The minimum length of the zero mark must be less than the zero mark distance (p4686 < p0425).
The parameter is activated using p0437.1 = 1 (zero mark edge detection).

p4688[0...2] CO: Zero mark monitoring differential pulse count / ZM diff_puls qty

VECTOR_G	**Can be changed:** T	**Calculated:** -	**Access level:** 3
	Data type: Integer32	**Dyn. index:** -	**Function diagram:** -
	P group: -	**Unit group:** -	**Unit selection:** -
	Not for motor type: -	**Scaling:** -	**Expert list:** 1
	Min:	**Max:**	**Factory setting:**
	-2147483648	2147483647	0

Description: Display and connector output for the identified incorrect pulses in lines.
Also see p0437.7 (do not accumulate number of incorrect pulses).

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: See also: p0437, p4681, p4682, p4683, p4684

Note: The display can only be reset to zero.

p4688 CO: Zero mark monitoring differential pulse count / ZM diff_puls qty

ENC

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Integer32	**Dyn. index:** -	**Function diagram:** -
P group: -	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-2147483648	2147483647	0

Description: Display and connector output for the identified incorrect pulses in lines.
Also see p0437.7 (do not accumulate number of incorrect pulses).

Dependency: See also: p0437, p4681, p4682, p4683, p4684

Note: The display can only be reset to zero.

r4689[0...2] CO: Square-wave encoder diagnostics / Sq wave enc diag

VECTOR_G

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the encoder status according to PROFIdrive for a square-wave encoder.

Index: [0] = Encoder 1
[1] = Encoder 2
[2] = Encoder 3

Dependency: See also: A31422

Note: After alarm A3x422 is output, this parameter is set for 100 ms.

r4689 CO: Square-wave encoder diagnostics / Sq wave enc diag

ENC

Can be changed: -	**Calculated:** -	**Access level:** 4
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Encoder	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the encoder status according to PROFIdrive for a square-wave encoder.

Dependency: See also: A31422

Note: After alarm A3x422 is output, this parameter is set for 100 ms.

p4690 SMI spare part component number / SMI comp_no

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	399	0

Description: Sets the component number for the SMI/DQI for which motor and/or encoder data should be saved, deleted or downloaded.

Dependency: See also: p4691, p4692, p4693

Note: DQI: DRIVE-CLiQ Sensor Integrated
SMI: SINAMICS Sensor Module Integrated

p4691 SMI spare part save/download data / Save/DL SMI data

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	39	0

Description: Setting for the saving/downloading/deletion of motor and/or encoder data for the component specified in p4690 (SMI/DQI).

A backup of this data can be saved to non-volatile memory. The backup procedure is performed automatically as part of the function for saving to non-volatile memory (p0977 = 1 or "Copy RAM to ROM"). If a part is replaced, the saved data can be reloaded.

Procedure:

p4690 = set component number

p4691 = 1, 2, 30: Set the required procedure (save/download/delete).

p4691 = 9, 10, 36: Feedback signal on successful completion of the procedure.

p4691 = 11... 22, 37, 38: Error values if the procedure could not be executed successfully.

Value:

0: Inactive
1: Save SMI data
2: Download SMI data
9: SMI data downloaded and POWER ON required for component
10: SMI data backup complete
11: SMI data backup for selected component not found
12: Selected component not available or not connected
13: Insufficient memory space for backup
14: Format of saved data is incompatible
15: Transfer fault during data download
16: Transfer fault during data backup
17: Data backup does not match parameterized encoder/motor
18: Data backup directory not permissible
19: Component already contains data
20: Component does not contain any data
21: Component is not an SMI or a DQI
22: SMI data cannot be downloaded for component
30: Delete SMI data
35: Confirmation of SMI data delete required
36: SMI data deleted and POWER ON required for component
37: Access level not sufficient for delete
38: Delete SMI data not permitted for component
39: SMI data for component cannot be deleted

Dependency: See also: p4690, p4692, p4693

Notice: Once SMI/DQI data has been deleted or downloaded successfully, the component has to be switched on (POWER ON).

Note:

SMI: SINAMICS Sensor Module Integrated
DQI: DRIVE-CLiQ Sensor Integrated
Help for error value = 11:
- Save the data for the original SMI on the memory card.
- Use an SMI with a suitable hardware version.
Help for error value = 12:
- set the correct component number or connect the component.
Help for error value = 13:
- Use a memory card with more memory space.
Help for error value = 14:
- Create a data backup on the memory card corresponding to the SMI type.
Help for error value = 15:
- check the DRIVE-CLiQ wiring for the component.
Remedy for fault value = 16:
- check the DRIVE-CLiQ wiring for the component.
Help for error value = 17:
- Save the data for the original SMI on the memory card.
Remedy for fault value = 18:
- set parameter p4693 to an appropriate value.
Remedy for fault value = 19:
- Perform an SMI delete or use a blank SMI.
Remedy for fault value = 20:
- Use an SMI that is not blank.
Remedy for fault value = 21:
- set the correct component number (p4690).
Note for error value = 22:
- Data cannot be downloaded for component.
Remedy for fault value = 35:
- Reset parameter p4691 to 30.
Remedy for fault value = 37:
- set the access level to Expert or higher.
Help for error value = 38:
- insert the SMI/DQI into the actual topology as an additional component (component number >= 200).
- set the component number from the actual topology (p4690 >= 200).
- set the correct component number (p4690 >= 200).
Note for error value = 39:
- SMI already deleted or too old. Delete not possible.

p4692 SMI spare part save data of all SMIs / Save SMI data

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 1
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	29	0

Description: Setting to back up the data of all SMIs and DQIs featured in the target topology.

Value:

0: Inactive
1: Save data of all SMIs and DQIs
10: Save all data successful
13: Insufficient memory space for backup
16: Transfer fault during data backup
20: Component does not contain any data
29: Not all components from target topology saved

Note: SMI: SINAMICS Sensor Module Integrated
p4692 = 10: Automatic on successful completion of backup procedure.
p4692 = 13, 16, 20, 29: Error values if the procedure could not be executed successfully.
The procedure must be repeated if the data save operation was interrupted (e.g. if the power supply voltage failed).
Help for error value = 13:
- Use a memory card with more memory space.
Remedy for fault value = 16:
- check the DRIVE-CLiQ wiring.
Remedy for fault value = 20:
- Use an SMI that is not blank.
Help for error value = 29:
- check and correct the target and actual topologies for the SMIs.
- Repeat the save procedure.

p4693[0...1] SMI spare part data backup directory / SMI dat_bkup dir

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: T	**Calculated:** -	**Access level:** 3
Data type: Unsigned16	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
0	399	0

Description: Sets the directory for downloading and saving data.
Example:
The SMI has the component number 5 and the SMI data (motor/encoder data) is to be stored in subdirectory C205.
--> p4690 = 5, p4693[0] = 205, p4691 = 1

Index: [0] = Subdirectory selection
[1] = Reserved

Dependency: See also: p4691, r4694

Notice: If p4693[0] is not equal to 0 and p4693[0] is not equal to p4690, the following applies:
- Only a number >= 200 may be selected for the subdirectory when saving.
- in the case of downloads, a selection for the subdirectory may only be made for an SMI/DQI with a component number >= 200 (preliminary component number) (p4690 >= 200).

Note: DQI: DRIVE-CLiQ Sensor Integrated
SMI: SINAMICS Sensor Module Integrated
For index [0]:
This index is used to select the subdirectory for saving and downloading data. The motor article number (MLFB) of the corresponding data backup is displayed in r4694.
For p4693[0] = 0, the following applies:
The directory is determined by the setting of p4690.

r4694[0...19] SMI spare part data backup motor article number / SMI dat_bkup MLFB

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: Displays, signals	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 1
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the motor article number (MLFB) of the data backup selected with p4693.

Dependency: See also: p4691, p4692

Caution: If the selected subdirectory contains a number of data sets, "More Datasets" is displayed in r4694[0...19].
If there is no SMI data (motor/encoder data) in the selected subdirectory or if the selected subdirectory does not exist, the following applies:
- the number of the next subdirectory located is displayed.
- this subdirectory is not checked for valid SMI data.
- if another subdirectory cannot be located, nothing is displayed in r4694[0...19].

Note: SMI: SINAMICS Sensor Module Integrated

p4700[0...1] Trace control / Trace control

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dyn. index:** - | **Function diagram:** -
P group: Trace and function generator | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min:	Max:	Factory setting:
0	1	0

Description: Setting to control the trace function.

Value:
0: Stop trace
1: Start trace

Index:
[0] = Trace 0
[1] = Trace 1

p4701 Measuring function control / Meas fct ctrl

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dyn. index:** - | **Function diagram:** -
P group: Trace and function generator | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min:	Max:	Factory setting:
0	3	0

Description: Setting to control the measuring function.

Value:
0: Stop measuring function
1: Start measuring function
2: Measuring function check parameterization
3: Start measuring function without enable signals

p4703[0...1] Trace options / Trace options

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: T | **Calculated:** - | **Access level:** 3
Data type: Unsigned16 | **Dyn. index:** - | **Function diagram:** -
P group: Trace and function generator | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min:	Max:	Factory setting:
-	-	0000 bin

Description: Sets the options for the trace.

Index:
[0] = Trace 0
[1] = Trace 1

Bit array:

Bit	Signal name	1 signal	0 signal	FD
00	Automatically start trace with time slices	Yes	No	-

Dependency: See also: p4700

Note: For bit 00:
0: The trace starts with p4700 as before.
1: When powering up, the trace starts immediately with the saved parameter settings with the start of the time slices.

r4705[0...1] Trace status / Trace status

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Integer16 | **Dyn. index:** - | **Function diagram:** -
P group: Trace and function generator | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min:	Max:	Factory setting:
0	6	-

Description: Displays the actual status of the trace.

Value:
0: Trace inactive
1: Trace is recording presamples
2: Trace is waiting for trigger event
3: Trace is recording
4: Recording (trace) ended
5: Trace inactive with permissible configuration data
6: Trace inactive with inadmissible configuration data

Index: [0] = Trace 0
[1] = Trace 1

r4706 Measuring function status / Meas fct status

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0	5	-

Description: Displays the actual status of the measuring function.

Value:
0: Measuring function inactive
1: Measuring function parameterization checked
2: Measuring function waits for stabilizing time
3: Measuring function recording (tracing)
4: Measuring function trace ended with error
5: Measuring function trace successfully completed

p4707 Measuring function configuration / Meas fct config

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0	1	0

Description: Setting to configure the measuring function.

Value:
0: Standard
1: Free measuring function

Dependency: The parameter cannot be changed when the measurement function has been started (r4706 = 2, 3).

Note: This parameter involves free measurement functions, and is only active for p4810 = 6.
For value = 0:
The free measuring function is parameterized with master control.
For value = 1:
The free measuring function is parameterized without master control.

r4708[0...1] Trace memory space required / Trace mem required

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the required memory in bytes for the actual parameterization.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: See also: r4799

r4709[0...1] Trace memory space required for measuring functions / Trace mem required

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the required memory in bytes for the actual parameterization.
This applies, if the trace for the measurement functions is used.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: See also: r4799

p4710[0...1] Trace trigger condition / Trace Trig_cond

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Integer16	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
1	8	2

Description: Sets the trigger condition for the trace.

Value:
1: Immediate trace start
2: Positive edge
3: Negative edge
4: Entry to hysteresis band
5: Leaving hysteresis band
6: Trigger at bit mask
7: Start with function generator
8: Trigger at bit mask with edge

Index: [0] = Trace 0
[1] = Trace 1

p4711[0...5] Trace trigger signal / Trace trig_signal

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Selects the trigger signal for the trace.

Index: [0] = Trace 0 parameter in BICO format
[1] = Trace 1 parameter in BICO format
[2] = Trace 0 PINx with DO Id and chart Id
[3] = Trace 0 PINx with block Id and PIN Id
[4] = Trace 1 PINy with DO Id and chart Id
[5] = Trace 1 PINy with block Id and PIN Id

Dependency: Only effective when p4710 does not equal 1.

Note: It only makes sense to trace the PINs using the commissioning tool.
For index 2(4) and 3(5) equal to zero, index 0(1) can only be written and vice versa.
For index [0...1]:
Here, the trigger signal for trace 0 or 1 is entered as parameter in the BICO format.
For trace with a physical address (p4789), the data type of the trigger signal is set here.
For index [2...3]:
The triggering PIN for trace 0 is entered here.
Index 2 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart
Index 3 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN
For index [4...5]:
The triggering PIN for trace 1 is entered here.
Index 4 bit 31 ... 16: Number of the Drive Object (DO), bit 15 ... 0: Number of the chart
Index 5 bit 31 ... 16: Number of the block, bit 15 ... 0: Number of the PIN

p4712[0...1] Trace trigger threshold / Trace trig_thr

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-340.28235E36	340.28235E36	0.00

Description: Sets the trigger threshold for the trace.
Index: [0] = Trace 0
[1] = Trace 1
Dependency: Only effective when p4710 = 2, 3.

p4713[0...1] Trace tolerance band trigger threshold 1 / Trace trig thr 1

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-340.28235E36	340.28235E36	0.00

Description: Sets the first trigger threshold for trigger via tolerance band.
Index: [0] = Trace 0
[1] = Trace 1
Dependency: Only effective when p4710 = 4, 5.

p4714[0...1] Trace tolerance band trigger threshold 2 / Trace trig thr 2

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-340.28235E36	340.28235E36	0.00

Description: Sets the second trigger threshold for trigger via tolerance band
Index: [0] = Trace 0
[1] = Trace 1
Dependency: Only effective when p4710 = 4, 5.

p4715[0...1] Trace bit mask trigger, bit mask / Trace trig mask

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0	4294967295	0

Description: Sets the bit mask for the bit mask trigger.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 6 or p4710 = 8.

p4716[0...1] Trace bit mask trigger trigger condition / Trace Trig_cond

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0	4294967295	0

Description: Sets the trigger condition for bit mask trigger.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only effective when p4710 = 6.

p4717 Measuring function number of averaging operations / Meas fct avg qty

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0	255	0

Description: Sets the number of averaging operations for the measuring function.

p4718 Measuring function number of stabilizing periods / MeasFct StabPerQty

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned8	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0	255	0

Description: Sets the number of stabilizing periods for the measuring function.

r4719[0...1] Trace trigger index / Trace Trig_index

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the trigger index in the trace buffer.
The trigger event occurred at this point.

Index: [0] = Trace 0
[1] = Trace 1

Dependency: Only valid when p4705 = 4.

p4720[0...1] Trace recording cycle / Trace record_cyc

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0.000 [ms]	60000.000 [ms]	1.000 [ms]

Description: Sets the recording cycle for the trace.

Index: [0] = Trace 0
[1] = Trace 1

p4721[0...1] Trace recording time / Trace record_time

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0.000 [ms]	340.28235E36 [ms]	1000.000 [ms]

Description: Sets the recording time for the trace.

Index: [0] = Trace 0
[1] = Trace 1

p4722[0...1] Trace trigger delay / Trace trig_delay

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-340.28235E36 [ms]	340.28235E36 [ms]	0.000 [ms]

Description: Sets the trigger delay for the trace.
Trigger delay < 0:
Pretrigger: Tracing (recording) starts the selected time before the trigger event actually occurs.
Trigger delay > 0:
Post trigger: Tracing does not start until the set time after the trigger event.

Index: [0] = Trace 0
[1] = Trace 1

p4723[0...1] Trace time slice cycle / Trace cycle

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: FloatingPoint32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0.03125 [ms]	4.00000 [ms]	0.12500 [ms]

Description: Sets the time slice cycle in which the trace is called.

Index: [0] = Trace 0
[1] = Trace 1

p4724[0...1] Trace average in the time range / Trace average

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T | **Calculated:** - | **Access level:** 3
Data type: Unsigned8 | **Dyn. index:** - | **Function diagram:** -
P group: Trace and function generator | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min:	Max:	Factory setting:
0000 bin	0001 bin	0000 bin

Description: Sets the averaging in the time range for the trace.
Index: [0] = Trace 0
[1] = Trace 1

r4725[0...1] Trace data type 1 traced / Trace rec type 1

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** -
P group: Trace and function generator | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min:	Max:	Factory setting:
-	-	-

Description: Displays the recorded data type 1 for the trace.
Index: [0] = Trace 0
[1] = Trace 1

r4726[0...1] Trace data type 2 traced / Trace rec type 2

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** -
P group: Trace and function generator | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min:	Max:	Factory setting:
-	-	-

Description: Displays the recorded data type 2 for the trace.
Index: [0] = Trace 0
[1] = Trace 1

r4727[0...1] Trace data type 3 traced / Trace rec type 3

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** -
P group: Trace and function generator | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min:	Max:	Factory setting:
-	-	-

Description: Displays the recorded data type 3 for the trace.
Index: [0] = Trace 0
[1] = Trace 1

r4728[0...1] Trace data type 4 traced / Trace rec type 4

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: - | **Calculated:** - | **Access level:** 3
Data type: Unsigned32 | **Dyn. index:** - | **Function diagram:** -
P group: Trace and function generator | **Unit group:** - | **Unit selection:** -
Not for motor type: - | **Scaling:** - | **Expert list:** 0

Min:	Max:	Factory setting:
-	-	-

Description: Displays the recorded data type 4 for the trace.

Index: [0] = Trace 0
[1] = Trace 1

r4729[0...1] Trace number of recorded values / Trace rec values

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the number of traced values for each signal.
Index: [0] = Trace 0
[1] = Trace 1
Dependency: Only valid when p4705 = 4.

p4730[0...5] Trace record signal 0 / Trace record sig 0

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	0

Description: Selects the first signal to be traced.
Index: [0] = Trace 0 parameter in BICO format

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0.

The trace (record) buffer is sub-divided into memory banks, each containing 16384 values. Parameter p4795 can be used to toggle between the individual banks.

Example A:

The first 16384 values of signal 0, trace 0 are to be read out.

In this case, memory bank 0 is set with p4795 = 0. The first 16384 values can now be read out using r4740[0] to r4740[16383].

Example B:

The values 16385 to 32768 from signal 0, trace 0 are to be read out.

In this case, memory bank 1 is set with p4795 = 1. The values can now be read out in r4740[0] to r4740[16383].

Dependency: See also: p4795

Description: Displays the trace buffer (record buffer) for trace 0 and signal 0 as integer number.

Note: For signals, data type I32 or U32, the trace buffer is assigned as follows:
r4760[0] = value 0
r4760[1] = value 1
...
r4760[8191] = value 8191
For signals, data type I16 or U16, the trace buffer is assigned as follows:
r4760[0] = value 1 (bit 31 ... 16) and value 0 (bit 15 ... 0)
r4760[1] = value 3 (bit 31 ... 16) and value 2 (bit 15 ... 0)
...
r4760[8191] = value 16383 (bit 31 ... 16) and value 16382 (bit 15 ... 0)
For signals, data type I8 or U8, the trace buffer is assigned as follows:
r4760[0] = value 3 (bit 31 ... 24) value 2 (bit 23 ... 16) value 1 (bit 15 ... 8) value 0 (bit 7 ... 0)
r4760[1] = value 7 (bit 31 ... 24) value 6 (bit 23 ... 16) value 5 (bit 15 ... 8) value 4 (bit 7 ... 0)
...
r4760[8191] = value 32767 (bit 31 ... 24) value 32766 (bit 23 ... 16) value 32765 (bit 15 ... 8) value 32764 (bit 7 ... 0)

r4772[0...16383] Trace 1 trace buffer signal 2 / Trace 1 rec sig 2

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 2.
Dependency: See also: r4760

r4773[0...16383] Trace 1 trace buffer signal 3 / Trace 1 rec sig 3

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 3.
Dependency: See also: r4760

r4774[0...16383] Trace 1 trace buffer signal 4 / Trace 1 rec sig 4

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 4.
Dependency: See also: r4760

r4775[0...16383] Trace 1 trace buffer signal 5 / Trace 1 rec sig 5

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 5.
Dependency: See also: r4760

r4776[0...16383] Trace 1 trace buffer signal 6 / Trace 1 rec sig 6

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 6.

Dependency: See also: r4760

r4777[0...16383] Trace 1 trace buffer signal 7 / Trace 1 rec sig 7

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: -	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
-	-	-

Description: Displays the trace buffer (record buffer) for trace 1 and signal 7.

Dependency: See also: r4760

p4780[0...1] Trace physical address signal 0 / Trace PhyAddr Sig0

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin

Description: Sets the physical address for the first signal to be traced.
The data type is defined using p4730.

Index: [0] = Trace 0
[1] = Trace 1

p4781[0...1] Trace physical address signal 1 / Trace PhyAddr Sig1

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin

Description: Sets the physical address for the second signal to be traced.
The data type is defined using p4731.

Index: [0] = Trace 0
[1] = Trace 1

p4782[0...1] Trace physical address signal 2 / Trace PhyAddr Sig2

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
P group: Trace and function generator	**Unit group:** -	**Unit selection:** -
Not for motor type: -	**Scaling:** -	**Expert list:** 0
Min:	**Max:**	**Factory setting:**
0000 bin	1111 1111 1111 1111 1111 1111 1111 1111 bin	0000 bin

Description: Sets the physical address for the third signal to be traced.
The data type is defined using p4732.

Index: [0] = Trace 0
[1] = Trace 1

p4783[0...1] Trace physical address signal 3 / Trace PhyAddr Sig3

CU_G130_PN, CU_G150_PN, CU_G130_DP, CU_G150_DP

Can be changed: U, T	**Calculated:** -	**Access level:** 3
Data type: Unsigned32	**Dyn. index:** -	**Function diagram:** -
